Amateur Radio Newsline™ Report 1362– September 19 2003

A NOTE TO THOSE WHO ONLY “READ” AMATEUR RADIO NEWSLINE

As you are aware, Amateur Radio Newsline is, primarily, an audio news service and this weeks newscast is very audio intensive. While reading gives the basic facts, we advise you to download the audio file at http://www.arnewsline.org/quincy to get the most out of the newscast in relation to our coverage of Hurricane Isabel and the role Amateur Radio played and continues to play in storm communications efforts. This is a story told in “sound” from the scene that really cannot be reported in any other way.

**

Amateur Radio Newsline report number 1362 with a release date of Friday, September 19th 2003 to follow in 5-4-3-2-1.

The following is a Q-S-T. Ham radio is there as a hurricane pounds the U-S east coast, the ARRL holds tight on Morse and more petitions are on their way to the FCC. Find out the details on Amateur Radio Newsline report number 1362 coming your way right now.

(Billboard Cart Here)

**

RESCUE RADIO: HAM ADIO AND HURRICANE ISABEL

Her name is Isabel. She is a hurricane that slammed into the United States East coast with gale force winds. Emergency services including ham radio were ready and waiting as we hear in this report:

--

Roaring ashore with winds of more than 100 miles an hour, Isabel made landfall along North Carolina's Ocracoke Island, crossing the Outer Banks around midday September 18th. On the west end of Ocracoke Island, sustained winds were measured at 80 miles an hour. Storm surge of 12 feet was reported I

Bernard Nobles, WA4MOK, is a Section Emergency Coordinator in North Carolina. He says hams mobilized over a large part of the state:

4:07 IN In emergency operations centers
OUT in the eastern part of the state

The action wasn't just in North Carolina. Hams throughout the eastern seaboard were in position, ready to provide backup communications. Only a few hours after the storm had moved ashore, more than 800-thousand customers were without power in North Carolina and Virginia. Bill Moraine, N2COP, is a Public Information Officer in southeastern North Carolina. He says hams were providing a variety of communications services:

--

IN they really run the range of
OUT in northeastern North Carolina.

--

Morrain says High Frequency conditions were often deplorable with extensive interference. He says the Hurricane Watch Net was being relayed locally through both EchoLink and IRLP, the Internet Repeater Linking Project, to help overcome H-F problem. All along the storms projected path ham radio operators trained in emergency communications were in service or on stand-by alert. The Hurricane Watch Net was busy on 14-point-325 MHz. At the National Hurricane Center in Florida, amateur station WX4NHC helped with relaying storm reports. With hams throughout the mid-Atlantic region helping in the communications effort, Morraine said putting a number on those assisting would be tough:

--

IN We don't have a handle
OUT in this particular disaster One bit of good news.

--

Morraine says Isabel is no Hugo, referring to the devastating hurricane that slammed into North Carolina in 1989:

--

IN Thanksfully, Isabel
OUT about 105.

--

Hams were scheduled to staff the North Carolina Emergency Management Eastern Branch headquarters in Kinston. The amateur station at the state emergency operations center in Raleigh was also activating, with an umbrella of liaison stations being organized to monitor the 146.88 MHz repeater and the Tarheel Net.

The National Weather Service had hurricane warnings posted for parts of North Carolina and Virginia. Forecasters warned hurricane force winds were possible 150 miles inland, along with tornadoes.

As Isabel began moving north after landfall, flooding became a serious threat. At least one hotel in Kill Devil Hills collapsed into the ocean. Evacuations were being ordered along Chesapeake Bay.

In the hurricane's first day ashore, nearly 900 flights had to be cancelled, with some airports closing or limiting service. Up to a foot of rain was possible in West Virginia's hilly Eastern Panhandle, with between 6 and 9 inches of rain expected over parts of Pennsylvania. Amateur radio operators say they will stay on the air helping--as long as needed.

For the Amateur Radio Newsline, I'm David Black, KB4KCH, in Birmingham Alabama.

+++

As David said, it was North Carolina that was the first to feel Isabel's fury. Gay Pearce, KN4AQ, is in Raleigh with that part of the story.

+++

Amateur Radio was in full swing in eastern North Carolina as Hurricane Isabel made landfall on Thursday. For hams and everyone else, the term "made landfall" was a confusing one. High winds, rain and power failures reached the Raleigh-Durham area, 150 miles inland, well before the hurricane eye crossed the coastline.

--

IN: WAKE EOC POWER FAIL AUDIO]

--

The Tarheel Emergency Net, North Carolina's ARES net, was in operation, splitting duty between 3923 and 7232 kHz, depending on propagation

--

IN: HF COUNTY CHECK-IN AUDIO],

--

The North Carolina ARES group has not yet begun to use 60 meters.

Most traffic between the coast and the states Eastern Branch headquarters in Kinston was being handled on linked repeater systems.

Several hams have remained on Hatteras Island on the Outer Banks, and for a time, hams across the world could listen to them via Echolink and IRLP connections. That ended as power and phone service failed near the coast.

The National Hurricane Center in Miami continued to use the Internet links to take reports from areas where connections remained in place.

--

[K4JVP AUDIO]

--

There was some confusion early as too many sources of input were mixed together on one combined Echoink/IRLP conference. The National Hurricane Center's liaison station commented:

--

[HNC CONFUSION AUDIO]

--

Control operators were able to clear up that confusion, but locally, repeater operators are finding that they can't mix local emergency and logistics traffic with a full-time Internet connection that's carrying similar traffic on other repeaters. That's a lesson for the next emergency.

Repeaters were used inland as well. The wide coverage 146.88 repeater in Raleigh linked the State EOC with surrounding counties and the Eastern Branch headquarters.

--

[VHF COUNTY CHECK-IN AUDIO]

--

Shelters began filling up as the storm moved inland, but with most shelters located in counties that would receive at least Tropical Storm force winds and a possible loss of power and telephone service, Amateurs were dispatched to provide communications.

--

[SHELTER VOLUNTEER AUDIO]

--

Reporting for Newsline from the fringe of Hurricane Isabel, this is Gary Pearce KN4AQ in Raleigh, North Carolina.

--

More on Hurricane Isabel and the role of ham radio in future Amateur Radio Newsline reports. (Numerous sources)

**

Break 1

From the United States of America, We are the Amateur Radio Newsline, heard on bulletin stations around the world including the WR4AMS repeater serving

Eastern Kentucky.

(5 sec pause here)

**

RESTRUCTURING: THE ARRL POSITION - WAIT TO HEAR FROM OUR MEMBERS

Why hasn't the ARRL joined those who have already filed petitions to the FCC on the topics of Morse Code testing and changes to license priveleges? In a note to his constituancy the League's Southwestern Division Director Art Goddard, W6XD, explains it this way:

"After determining that the FCC will be handling these matters in due course, your ARRL has set a timetable that includes ample opportunity to collect member input before determining its direction at the January 2004 Board meeting."

Goddard says to say tuned for further developments. He also tells ARRL members to contact their own ARRL Director and make known their views on these vital issues.

Goddard also suppled a brief overview of a meeting in St. Louis this past weekend, where ARRL Directors and Officers took what he calls the next step to define the ARRL's future role in Advancing and Advocating Amateur Radio. Although the details of ARRL's Long Range Plan aren't yet complete, W6XD says that hams can expect to see bold new actions in several key areas. These include advocacy in key regulatory and legislative issues, lifetime learning, certification and personal achievement and public recognition of Amateur Radio as a valuable service. Goddard adds that there will also be financial stability to implement all of these strategies. (ARRL SW Div. Report)

**

RESTRUCTURING: MORE CODE PETITIONS COMING

The ARRL may be taking the correct road on this one. This is because the latest ham radio restructuring show appears to be only in its opening act. In fact, it looks as if the six petitions favoring abolishing Morse testing and the one from FISTS favoring its retention may be only the beginning of a deluge of requests from both sides in the issue. We have heard that there are a number of other petitions already at the FCC or on their way but know little about them. Our Bruce Tennant, K6PZW has more:

As we go to air we believe there are as many as another half dozen petitions being filed on both sides of this contriversial restructuring issue. Amateur Radio Newsline will keep following this story and will have more fore you in upcoming reports. (Various sources)

**

RESTRUCTURING: FILE ON EACH PETITION

Still with this latest round of restructuring. If you are among those planning to file comments on one or more of the Morse petitions already before the FCC then listen up. If you want to make known your feelings on all of them, then you will have to file separate comments on each one.

As of this moment, a comment filed on any one particular petition will be considered for that specific rule making request alone and not on all. And having read the petitions, we can understand why. Each one asks for a specific approach in handling the Morse question and it would be impossible to provide a one comment that would fit all.

By the way, as we go to air the FISTS pro-code request has still not been assigned a rule making designation by the FCC. (ARNewsline(tm))

**

RADIO LAW: CONGRESS MAY INCREASE FCC AUTHORITY TO ISSUE FINES

The Federal Communications Commission would be given the authority to levy significantly higher fines. This, if a bill being considered by the Commerce Committee of the U.S. Senate becomes law. Amateur Radio Newsline's Mark Abramowicz, NT3V, has the details:

--

The Wall Street Journal reports that fines for violating FCC rules could jump tenfold, and activities of lobbyists would be further restricted under a bill introduced in mid-June by Senator John McCain who chairs the Committee that authorizes the agency's funding. In addition to the increase in the Commission's authority to levy fines, the proposed legislation would also extend the statute of limitations on violations of the agency's rules from one year to two.

Other provisions include restrictions that would prevent top staffers from lobbying the agency for one year after leaving their positions, and a ban on the payment of travel expenses of FCC officials by companies and private interest groups. In other words, if the FCC were to send out a representative to any gathering the cost must be borne by the agency and not the events sponsor. Its far to early to know if such a prohibition would impact on the FCC ability to attend hamfests, conventions and other hobby radio gatherings.

For the Amateur Radio Newsline, I'm Mark Abramowicz, NT3V, in Philadelphia.

--

McCain's bill reportedly has the support of Senator Ernest Hollings increasing its chances of gaining broader support. Even so, it is still expected to face tough opposition as it makes its way through the regulatory aproval process. (Published news reports)

**

REMEMBERING : THE 2ND ANNUAL N2LEN 9/11 NET

The second annual N2LEN nine eleven net took place on Thursday, September 11tth. The gathering used voice over I P technology to link repeaters world wide over the Internet. This allowed radio amateurs and non-ham listeners to reflect on the terrorist attacks of two years ago and the role that radio amateurs played in the aftermath.

ARRL President Jim Haynie, W5JBP, was this years keynote speaker. He addressed the role of Amateur Radio in homeland security and urged each amateur to develop his or her emergency communication skills.

As with the 2002 net, this year's cyberspace and radio meting relied on EchoLink and eQSO Internet software connections as well as repeaters and simplex links around the world. (N2LEN Net News Release)

**

AMATEUR RADIO SURVIVAL: UCF CLUB EVICTED FROM ITS HOME

The University of Central Florida Amateur Radio Club station K4UCF has been evicted. This, from the campus location that it had occupied for 30 years. Mert Garlick, N6AWE, reports:

--

According to a qrz.com website posting from Matt Collins, KG4JYD, the eviction took place last June but seems only now to have been made public. It reportedly resulted from faculty complaints about the radio club who concluded that damage to computer equipment was from a lightning strike that entered the building through the club's antenna system. University's plant personnel also complained that club members worked on the roof of the building without authorization.

But Matt Kassawara KG4FEQ , has a differing view. Kassawar who is with the club says that the ham station is the closest equipment to the antenna system. He says that neither that equipment nor the club repeaters were damaged by a lightning strike, indicating that the clubs antenna could not have been the source of the damage.

The club requested that University of Central Florida provide comparable space from which to operate. So far UCF administrators have refused.

For the Amateur Radio Newsline, I’m Mert Garlick, N6AWE.

--

More information is on the web at qrz.com and
http://pegasus.cc.ucf.edu/~wb4tcw/evictimeline.html (qrz.com)

**

ENFORCEMENT: NY COURT DISMISSES HAM SCANNER CASE

Some good news for a New York State ham as a court dismisses a misdemeanor charge against Richard C. Lalone, KC5GAX. This for allegedly for violating an anti-scanner provision that state's Vehicle and Traffic Law.

According to the ARRL Letter, in a 1300-word decision, Judge John J. Hallet said it was clear the legislature never intended the provisions of traffic law 397 from applying to licensed Amateur Radio operators. He then dismissed the charge against Lalone August 5th.

The law in question prohibits individuals in New York state -- other than law officers -- from equipping their vehicles with radios capable of receiving signals on the frequencies allocated for police use without first securing a permit. The section also contains an explicit exemption for any person who holds a valid amateur radio operator's license. (ARRL)

**

ENFORCEMENT: FCC ASKS POWER COMPANY TO TRY HARDER TO RESOLVE NOISE COMPLAINTS

The FCC has asked American Electric Power Company of Columbus, Ohio to take a closer look at several power line noise complaints and try harder to resolve them. This in relation to complaints filed by four Amateur Radio operators in Ohio, Indiana and Oklahoma.

According to the ARRL Letter AEP responded February 10th to the FCC's initial correspondence regarding the four cases. But the agencys’ Special Counsel Riley Hollingsworth says that follow-up reports from the complainants suggest discrepancies exist between what AEP told the FCC and what the complainants report.

Hollingsworth said evidence to date indicates that none of the cases has been satisfactorily resolved. In one case, AEP erroneously identified the amateur's own antenna as the source of the noise.

Now, Hollingsworth has asked AEP to revisit each of these issues and to update the FCC within 45 days of any progress in each case. He also referred the power company to ARRL RFI Specialist Mike Gruber, W1MG, for technical assistance. (ARRL, FCC)

**

ENFORCEMENT: PAGING FINE

The FCC has affirmed a $9,000 fine against Air Paging, Inc.. This for failure to operate its Wireless Radio Station in accordance with its station authorization, continuous radiation of an unmodulated carrier, and failure to provide station identification by the assigned call sign.

Air Paging did not file a response to the initial Notice of Liability, so the $9,000 figure was affirmed. In addition, the Commission does not know if Air

Paging has corrected the various violations, so Air Paging has been given 30 days to outline what measures it has taken or will take to correct the violations and ensure that they do not recur. The entire mater is in cyberspace at
http://hraunfoss.fcc.gov/edocs_public/attachmatch/DA-03-2741A1.doc (CGC)

**

ENFORCEMENT: TWO MORE TOWER FINES ISSUED

The FCC has issued two more broadcasters hefty fines because of tower related violations. A monetary forfeiture in the amount of $10,000 was issued to Pinnacle Towers, Inc., owner of a tower in Des Moines, Iowa, for failing to clean and repaint its antenna structure to maintain good visibility. Dinged with a $3000 fine is Best Country Broadcasting, LLC, owner of the antenna structure located in Bogalusa, Louisiana. No reason for this fine was mentioned in the FCC digest for the Best Country fine. (CGC)

**

BREAK 2

This is ham radio news for today’s radio amateur. From the United States of America, We are the Amateur Radio Newsline with links to the world from our only official website at www.arnewsline.org and being relayed by the volunteer services of the following radio amateur:

(5 sec pause here)

**

INTERNATIONAL - AUSTRALIA: BPL COMING TO VK-LAND

The problem of Broadband over Powerlines or BPL is about to hit dwn-under. This as Australia makes ready to give it a go. Q-News Graham Kemp, VK4BB, has the latest:

--

PLT, PLC, BPL. What ever way you say it it means noise. Now, the Wireless Institute of Australia - Victoria says there is now clear evidence of a PLT-C/PBL push in Australia. That no-one can continue to be in denial mode.

From the Q-NEWS perspective Barry VK2AAB will no longer be a "voice in the wilderness." Many of us will soon be asking "why didn't we act sooner".

You'll recall months ago we mentioned the little units being sold by DSE. Well these are small fry compared to the same basics being applied to our 240 volt mains supply, or worse, the High voltage distribution system.

--

It appears as id BPL is quickly becoming a world-wide problem for Amateur Radio. (Q-News)

**

RADIO LAW FOLLOW-UP: NEVADA TOLD TO SCRAP NEW RADIO SYSTEM

Here’s a follow up on a story we brought to you several months ago regarding a new state wide radio system in Nevada and an oversight by the regulators planning it. As previousy reported, the Nevada Highway Patrol had spent $14 million on a contract with Motorola to build a computerized radio system. It was activated back in 2000 but nobody from the state ever applied to the FCC for licenses for the frequencies. As a result, the FCC had told the Nevada Highway Patrol and other state agencies to stop using the 140 frequencies by last June.

To comply with the federal order, Nevada has had to scrap a costly radio system that's less than two yeas old. So on Tuesday, September 9th the Nevada state Board of Examiners voted to spend $16.1 million on new radio gear for the Nevada Highway Patrol. (Published news reports)

**

NAMES IN THE NEWS: W4FAL AND K2AD ELECTED NEW NFCC DIRECTORS

Some names in the news. They are Frank Lynch, W4FAL and Doug Sharp, K2AD who have been elected as Directors of the National Frequency Coordinators Council.

The NFCC made known the results on September 6th. This, after twenty-eigh of its member councils took part in the vote.

The National Frequency Coordinators Council is an umbrella group of recognized repeater coordinators. It was formed as the result of a meeting held in St. Charls Missouri in the late 1990’s. (ARNewsline(tm))

**

HAMFESTS AND CONVENTIONS: QUEENSLAND AUSTRALIA ON SEPTEMBER 19-21

On the hamfest scene, the 30th annual North Queensland Amateur Radio Convention takes place September 19th to the 21st. The venue is down-under at James Cook University in the state of Queensland Australia. For details please e-mail k4zz@wia.org.au (Q-News)

**

HAMFESTS AND CONVENTIONS: THE DX BASH IN TEXAS IN OCTOBER

Back on this side of the Pacific, the 13th Annual DX BASH will be held on Oct 10th to the 11 at Lake Buchanan near Austin, Texas. Icom has provided a IC-746 Pro and IC-756 Pro II that will be in use at the W5KFT contest station for attendees to try out in actual "on the air" conditions. Also planned are programs on operating, contesting, towers and antennas. More nformation is on-line at www.dxbash.com (W5KFT)

**

SWL-FESTS: SCADS IN HUNTINGTON BEACH IN SEPTEMBER

And short-wave hobbyists, this one is for you. Word that the Annual Southern California Area D-X’ers Picnic will be held on September 20th from 8am to 4pm. This, at the Huntington Beach Central Park in Huntington Beach California.

Huntington Beach is a suburb of Los Angeles. Further information available from Stewart MacKenzie, WDX6AA, at 714-846-1685 from about 9 a.m. to 8 p.m. - Pacific coast time. (SCADS)

**

DX

In D-X, if you are waiting for a Q-S-L card for last June’s WB8XX operation on Antigua, you will have to be patient a bit longer. According to Kevin, cards ordered 2 months ago from PY2TNT never did show up and now it appears that the company maybe out of business. Kevin says that the website is suspended and E-mails bounce. WB8XX adds that he will be ordering more cards from a stateside supplier, and will have all of the cards out as soon as the 2nd order arrives. (VHF Reflector)

**

THAT FINAL ITEM: TEACHING HAM RADIO IN ALBANIA

And finaly this week, how would one of you like to teach ham radio in Albania? Yes, we said Albania. Well you can if you know the British Radio Amateur Examination course and like to travel. Here R-S-G-B Newsreader Jeramy Boot, G4NJH, with the rest of the story:

--

A radio amateur lecturer is required to help give a radio amateur course in the Technical University of Tirana, Albania, this coming November. The course will integrate amateur radio communications theory and practice into the University's normal study programme.

The course is organised in coordination with the Ministry of Telecommunications in Albania, in conjunction with the IARU, and using RSGB documentation. Several agencies and companies are providing financial support. The applicant should have experience of teaching electronics and telecommunications at the amateur radio level in a UK setting. The course material is based on the UK RAE at the Full licence level and will lead to a CEPT-recognised qualification for the successful students. The successful amateur will help to coordinate the other visiting lecturers, and the assignment will take three weeks out of a six-week program.

This is a unique opportunity to join a multi-national amateur radio team helping to create a new group of telecommunication engineers to benefit the Albanian economy. It will provide a rich experience, not to mention the opportunity to operate ZA1A from the hotel in any spare moments.

--

For more details, please contact Roger, G3LQP, by e-mail to g3lqp@aol.com
(GB2RS)

Anyone have adjustment tips for the Kent SP-1 paddle? This is the single lever "swiper", not the iambic. The instructions were minimal. I noticed on the Eham reviews that the only gripe on this unit was weak instructions.

Any help appreciated.

Dave - W9DPY

4382 virii currently quarantined in Postini for my benefit... 20 have sneaked through and been gutshot by Snortin' Futilities Antivirus... have already deleted 1500 virii friday and saturday and gave up to see what the count rises to. so we're around 5600 for the weakend.

and there were folks at my home ISP who had 4800 by noon saturday.

clearly these script kiddies are not very clever... they could have directed all this excitement to, say, whitehouse.gov or verisign.com, and done something useful. or to microsoft.com, where by rights they really belong :(

My Unix gSnot devaluator doesn't recognize those terms and they all came
up in Chinese characters on my mailreader after it enountered the fact
that you actually COUNTED 4382 virii.
Might you have a set of Dymo labels in this language that I can tape
onto my computer box? Red would look best.

-GEeK

I have a 1086-1094MHz monopole (rubber-ducky) antenna mounted (vertically/BNC connector thru circular ground-plane).

I would like to modify the ground plane so that it sees only signals in a cone from 45� above horizon and upwards.

I'm clueless in this antenna world.

How should I do this?

Thanks!

...Jim Thompson

Hi Jim,

Leave ground alone and make the antenna longer.  Roughly 7 cM is
```

quarterwave (probably the size of your current antenna). Or twice that for a halfwave. You want to maintain an integral multiple of either to make it at least one wavelength tall. If it is 7 cM, then try 21 or 35 cM (using odd, integral multipliers). If it is 14 cM, then try 28 or 42 cM (using even, integral multipliers).

The reason is that longer antennas become end-fire (that is, oriented along their length instead of broadside). The odd/even distinction is to maintain the expected load which repeats in these multipliers.

Hi again Moses
The review on Eham states there is a switch to change from 110 to 220
inside the unit. http://www.eham.net/reviews/detail/765#24124
I can not see it through the hole in my unit but someone else may
confirm.

As my reply said:

"If the error returns after you clear the memory, service is required."

For the price they'll charge you, you'd probably be able to buy a new HT.

I took mine to a local RS store a little over a year ago for this
reason. They charged me US$60 to replace the battery, and it took
about three weeks to get it back from the repair center. They replaced
a 3/4 inch button battery that is soldered onto one of the PC boards.
Next time I will probably do it myself, since it will probably cost
more than a new dual-band ICOM HT by then.

Hi,
I have CEPT 2 license here in Poland, but I want to work on HF bands.
I know that cw is not required in UK, and also that CEPT 2 owners can work
on HF in UK.
I am looking for friend who can help me with making UK license for me !!!
Can I get British license based on my CEPT 2 polish license ??? Which way
??? What have I to do ???
Please help me !!!
send all help to pastwa@go2.pl

And why not? I am the first to admit lack of experience any a field. You should not be afraid to ask, either. You learn a lot more than you do when you simply site there and ridicule people.

> ... over-rated ...

??? See what I mean ??? Superfluous words conveying no meaning, other than displaying emotions that one would hide in public to avoid embarrasment.

Not available in Sweden, just the usual 300MHz unity-gain (BC547, 557, etc), and the circuit stops operating at about 100MHz when the gain/pcb has become useless. I need RF transistors that are not available. ELFA only have no RF small signal devices.

> And for you to post such a question in alt.radio.pirate.... that's pretty
> pathetic, Harry.

I was a pirate myself, LONG before I became an amateur. I have a lot of respect for the knowledge and experience of some of these so-called "pirates". I wonder how just many "pirates" you have spoken to on the HF bands? Certainly more than 0 and you were not even aware of it.

Very best regards from Harry

if you are " in the RF business " , a ham operator , or simply
concerned about electromagnetic radiation exposure of all types ...
then see my auction for this Holaday monitor / receiver.
a rare chance to get a current and very expensive monitor for
an affordable price.

http://cgi.ebay.com/ws/eBayISAPI.dll?ViewItem&item=3040820589

73's and thanks

I recently purchased a used rig and along with it came a nice cigar
lighter adapter that terminated in two "lugs" with screw on caps for
attaching the power cable of the rig. There is no cord on this adapter
itself. Anyone know where I can find a couple more of these? They seem
ideal for running moderate powered mobile rigs (< 50W).

thanks!

John FYI -- from a recommended book:
Mobile power. It is tempting to use the cigarette lighter plug for 12 Volts to power the mobile radio and this may work for low power units, but it is always best to run two heavy gage wires through the firewall and directly to the battery via fuses in both lines. Don't use the chassis as a ground return, ground loop problems and noise pickup may occur, run both + and - lines to the battery. FM mobile transceivers with 50 W of output power can draw up to 10-12 Amperes of current at 12 Volts. Most cigarette lighter plugs cannot handle these high currents. Operating a 50 W mobile transceiver from the cigarette lighter plug may cause permanent damage to vehicle's electrical system, and can also be a fire hazard. You can probably operate a 6 W handheld transceiver from the cigarette lighter plug, but not a higher wattage radio.

While I agree, I'm looking for a portable solution to use in the 'yl's vehicle so I can run a decent rig without drilling. I figure 10-20W is adequate (I think the 1/4 wave antenna I have allocated for this use is only rated at 20W anyhow). In a small temporary installation like this I think using the lighter plug is good enough.

Of course while on the topic, What's the best way to connect to today's side terminal batteries? I'd like to go from the battery's +/- in *my* vehicle to a small fuse block where I can tie in before coming through the firewall. Unfortunately I don't do a lot of auto wiring and firewall drilling!

thanks!

Auto stores will have a longer bolt for the side battery terminals or adaptor kits if needed.
Use the right size heavy duty solder lugs for the connections.

I looked up my lighter circuit and it is 8 amps -- so 8 x 12 = 96 Watts -- at 50% or so efficiency -- should handle a 45 watt radio -- but that is pushing it to say nothing of stray noise that may be introduced and a possible voltage drop. Also the cigarette lighter may go thru the ignition switching.

Somehow on all my cars I find a grommet that lets me get thru the firewall without drilling.

Just looked up the current draw of an ICOM IC-2100H -- tis 12 Amperes on 50W
transmit. Their IC- V8000 draws 15 Amperes at 75 Watts transmit. I wouldn't
connect either of these radios to the cigarette lighter plug.

I melted the solder right out of the fuse in the lighter plug with mine.
Only took about a day.

Other then Rigrunner, is there any source for powerpole distribution boxes?

That was my thinking. As a note, I was just talking to a buddy of mine with an Excursion. His "lighter plug" is actually labeled "accessory plug" and had a 20A fuse in it from the factory. That tool replaced it with a 30A fuse so he could run his inverter rated at 25A. We won't discuss that call any further.

> Somehow on all my cars I find a grommet that lets me get thru the firewall without drilling.

That's good to know. I'll have to poke around a bit more and see what I can find in my 2002 Impala. I did have real good luck this afternoon on my '97 Silverado 2500. The previous owner had already run 12g through the firewall, so I had a hole to work with. I rewired it primarily because I wasn't sure what he had done - it was a bit confusing.

Anyway, on the Silverado there are two "taps" - basically large studs - along side of the fuse box. Each stud is hot and fused right in the box with a 30A fuse. I made up a couple of cables and ran these right into the cab using the existing hole. Found a good ground spot right on the firewall, so it's nice and short as well! Both cables are about 5' in length. Of course while these studs look stock (the fuse box cover actually is molded to fit right over them) they might not be, so if you happen to have a Silverado and don't see these studs don't blame me!

I'm sure the Impala won't be quite as easy.

I looked at my Yaesu 5100. It has 12A fuses, but my power supply reports it's only drawing about 6A on "high". My Diamond meter reports it's only putting out about 20W on high on 2M, and a bit less on 70cm. Obviously both of these numbers are suspect since I haven't had either device calibrated, but I think I'm safe in this case.

Now when my new Yaesu 8800 gets here next week I'll have another data point to check both the power supply and power meter against.

```
Xref: archiver1.google.com rec.radio.amateur:5749 rec.radio.amateur.homebrew:25014
```

I'm trying to find a way to measure the capacity of single -- mainly AA -- batteries. Some of my battery packs don't last as long as they should because of mismatches in cell capacity.

I've got a good assortment of electronic equipment, variable power supplies, high power resistors, etc. I've even got a Maha MH-C777PLUS charger/discharger. But this doesn't let you do single cells.

I can come up with some -- not so great -- ways to measure capacity, like discharging thru a resistor while monitoring voltage. This would allow me to at least match batteries somewhat but not really measure true capacity. For true capacity I need a constant current device, and that's where I'm stumped.

This could be electronic, if it's inexpensive and I can get the parts at Radio Shack. But I'm thinking more along the lines of a mechanical device to drain the battery in a constant current fashion. An electric motor would just slow down, so that wouln't work. What type of mechanical device pulls a constant current regardless of input voltage?

Does anyone have any suggestions on how to do this?

Thanks for your help.

You can use a 3 terminal voltage regulator and a resistor or two. They can
be wired for a constant current generator instead of constant voltage.

Put an AMP meter across the battery. A "AA" should be good for about 1.2 amps or so. Make sure the multi meter is in the 10 amp position before you do this!

Good luck, John w5cgu

Car stereo places and installers are sometimes a good resource for
this sort of thing, as they need the same type of feedthrough.

That was going to be my suggestion, for a split second. Then I
realised the Vin-Vout differential wouldn't let this work on a single
AA.

You don't need a constant current sink to determine "true" capacity. If your load resistor is suitable rated and reasonably low tempco, then monitoring the voltage tells you the current to a fair degree of accuracy, so you can even work out how many coulombs are extracted before a chosen end voltage is reached.

Besides, how many loads in your assorted appliances are constant current?

We do discharge testing (as part of evaluating Li-Ion charging systems) using precision logging equipment monitoring voltage while discharging into resistive loads of known characteristics. The only limit is the accuracy you require, and in your application a couple of percent is probably the spec.

My Radio Shack catalog, under "hard to find industrial batteries,"
lists the Eveready 413, 30 volts, at $12.99. It is catalog part #
960-0438 (this is the year 2001 catalog).

I could monitor and log the voltage across a fixed resistance, draw a
curve, calculate the area... This would be a real pain in the rear for
the number of batteries I want to test. So I'd really like to find a
simple constant current device.

This Radio Shack digital multimeter does voltage logging on a PC:
http://www.radioshack.com/product.asp?
catalog%5Fname=CTLG&category%5Fname=CTLG%5F011%5F008%5F002%5F000&product%5Fid=22%2
D812
The details on the software are vague. Does anyone have one of these?

Here's a cool device that would do the job, and then some. But I'd like
to keep it just a bit simpler:
http://www.yoredale.uklinux.net/electronics/capacity1cell.htm

One choice I've resorted to on a number of installations in sedans is to locate where the major cable bundle on the driver's side firewall goes through. It is usually embedded in a very large rubber seal. I usually can take a sharp flat bladed screwdriver and poke a hold in this rubber, being careful not to hit the cables in the center bundle. Poking a #14 black and red wires through this new slot is not difficult and usually provides adequate power from the battery to most dash mounted radios and other equipment.

Ed

Please see previous thread.

I'm trying to match AA battery capacities so they can be used together in battery packs and I think created a low-tech way to do this. I'd like to hear more informed opinions.

This would apply to NiCads and NiMh but it should work with lithium-ions too.

Take all your batteries of the same type and charge them all in parallel to the same voltage. Then one at a time remove them from the float voltage and attach them to a fixed size resistor (say 6 ohms) for a fixed period of time (say 3 hours) then measure their voltage. Well matched batteries should have similar voltages.

Does this wash?

The only thing I wonder about is the full charge state voltage. Say I'm doing Ni-Cads which usually top-out around 1.65 volts (where they experience a voltage drop), and I set the float voltage for the bunch at 1.5 volts. Would the maximum voltage of each cell make a difference here?

Thanks for your help.

>Radio Shack.

One possibility is an LM317 voltage regulator, wired up with one resistor between Vout and Vadj to create a current source (see the data sheet).

Another possibility is a JFET, with source and gate shorted together.

Problem with both of these approaches is, they probably need several volts of "headroom" before they begin acting as "stiff" constant-current sources. If you're hoping to run an individual 1.2-volt cell down to, say, 1.0 volts to measure its useful capacity, neither of these will work.

One thing you could do is simply discharge through a fixed resistor, measure the voltage periodically, and use Ohm's Law to calculate the current being discharged at each measurement time.

What's really important for matching in a battery pack is that the cells have very close to the same capacity. If one has lower capacity than the others, the others will reverse charge it after it discharges. This further reduces its capacity, making it go flat even sooner the next time. The absolute cell voltage at any point in the discharge process is unimportant.

Unfortunately, you can't discern the remaining capacity of a NiCd or NiMH cell by looking at the cell voltage. The only way to accomplish the matching is to discharge each cell until its energy is essentially completely gone (i.e., to 1.0 volt at moderate drains), and select cells on the basis of how long they take to get there. Ideally, the discharge rate would be about the same as in the device you intend to use the battery for. But in practice, the capacity of NiCd and NiMH cells isn't a very strong function of the load current, so you've got quite a bit of leeway.

Many years ago I made up a discharger for this purpose. It's basically an adjustable constant current load with an adjustable voltage comparator. When the voltage reaches the comparison voltage, it disconnects the load. An old analog electric clock is used to record the time -- the comparator also removes power from the clock. Initially set at 12:00, it directly reads the time it took for the cell to discharge to the specified voltage level. These days it would make a lot more sense to use an A/D converter computer board and/or a microcomputer chip of some sort.

Hi Joe,
Many thanks for the information. You have been a great help; exactly what I
was alooking for. I keep having trouble buying this sort of specialised RF
component.

Mant thanks again for your help. BR Harry

How about using a storage scope to plot the discharge curves and a
computer program to work out the areas under the curves?

Many years ago someone associated with NASA figured out that the
life expectancy of nicads (series or parallel use) could be increased
significantly by matching the internal impedances. The recharge/charge
life did not just double, but went up by a factor of ten (approx).
I think this was published in the some NASA Tech journal. It used to
be published about 10 times a year, it might still be.

As I alluded to in my previous, I suspect you will find simple constant current and 1v5 are relatively mutually exclusive unless you want to go to low voltage op amps and roll your own.

I don't know what you are using to post your n/g messages, but I use a PC. They DO have other capabilities besides internet connectivity. It takes but a few lines of code - even in humble QBasic - to log the voltages at set intervals, calculate current, and do time integration to obtain joule or coulomb figures. Having a constant current device as your load won't make this task any easier in reality.

>This Radio Shack digital multimeter does voltage logging on a PC:
>http://www.radioshack.com/product.asp?

D812
>The details on the software are vague. Does anyone have one of these?

The average "affordable" RS-232 equipped multimeter seems to invariably have a poor overall accuracy spec. This won't affect

repeatability or the validity of comparisons, but does obviously
impact on absolute numbers you obtain.

>Here's a cool device that would do the job, and then some. But I'd like

Harry,
have a look at the following page:
http://www.xs4all.nl/~barendh/Indexeng.htm
He seem to stock several old Plessey prescalers, and it should keep
you going for a while.

I guess eventually these chips WILL be nowhere to be found within a
few years time but that is evolution....

One non-obsolete chip-source would be Peregrine,
http://www.peregrine-semi.com/prd_pll.html
they have some neat parallell programmed IC's that runs to over 3 GHz.
They are an improved Qualcomm Q3036 which can be found as surplus
And there is several more interesting IC, not only PLL and prescalers
but complete PLL with internal EPROM which keeps the serial programmed
data even if one shut off the power. Great for that miniaturized
project!!

GL

Seems the RC car community matches batteries based on a number of
criteria like capacity, internal resistance, and average voltage. The
websites I found on this don't give specifics.

Buying a $200 pieces of test equipment to measure all this is slight
overkill. I think I came up with a way. What to you think of this?

Charge all the batteries in parallel to the same voltage, say 1.5
volts. Then partially discharge them all in series. At this point
quickly measure the voltage of each cell while still under load.
Matched cells would have the same voltage.

Why charge them in parallel? Having them all charge the same in the real
world should be part of the matching. In fact, if you start out with all
batteries in the same state, and charge them in series, you can quickly pick
out oddball by measuring the charging voltage across each cell.

I currently have for sale the following old radio-related books. Postage is $2.50 for the first book and $1 for each additional item (Media Mail within the US, at cost elsewhere). The books are:

Worldwide Publications "White's Radio Log, Vol. I, Number I" Worldwide Publications, c1982. The 136 page softbound book is in good+ condition, clean with no page tears or pen marks. Not dated, but looks to be from the early 1980's. A directory of North American AM, FM, and TV stations including world-wide shortwave stations. Available for $3.

American Radio Relay League "The A.R.R.L. Antenna Book" American Radio Relay League, 1960. Nineth edition. The 320+ page softbound book is in good condition. The covers show some wear from previous use, there are a few bent page tips, and there is a previous owners address label inside the front cover. A good solid reading copy of this informative text on radio antenna technology. Available for $4.

Federal Telephone and Radio Corporation "Reference Data for Radio Engineers, 2nd edition" Federal Telephone and Radio Corporation, 1946. Second edition. The 322+ page hardbound book is in about very good condition, clean with no page tears or pen marks except for a previous owners name stamp inside the covers. Green cloth covers. A nice early radio reference text. Available for $7.

Federal Telephone and Radio Corporation "Reference Data for Radio Engineers, 1st edition" Federal Telephone and Radio Corporation, 1943. First edition, second printing. The 200 page hardbound book is in good+ condition, clean with no page tears or pen marks except for a previous owners name inside the front cover. The pages are a bit wavey along the bottom edge, possibly from minor moisture exposure. Otherwise very nice. Green cloth covers over flexible boards. A nice early radio reference text. Available for $10.

Everitt, William Littell "Communication Engineering" McGraw-Hill, 1937. The 727 page hardbound book is in about very good condition. Clean with no page tears or pen marks except for a previous owners name and address inside the front cover, and a few passages underlined in pencil. A nice early text on the science of the radio. Available for $9.

Jordan, Edward C.; Paul H. Neilson; William Carl Osterbrock; Fred H. Pumphrey; Lynne C. Smeby "Fundamentals of Radio" Prentice-Hall, 1945. Twelth printing. The 400 page hardbound book is in very good condition, clean with no page tears or pen marks. A nice early text on radio design and principles of operation, including a few fold-out schematics. Available for $9.

Terman, Frederick Emmons "Fundamentals of Radio" McGraw-Hill, 1938. First edition, seventh printing. The 458 page hardbound book is in about very good condition, clean with no page tears or pen marks except for a previous owners name and address inside the front cover which has been marked out. A nice early radio reference text. Available for $9.

Institute of Radio Engineers "1933 Report of the Standards Committee of The Institute of Radio Engineers" Institute of Radio Engineers, 1933. The 225 page softbound book is in good+ condition, clean with no page tears or pen marks except for a previous owners name on the front cover. Some wear to the spine paper, but not too bad. Page tips in rear lower corner bent outwards somewhat. A neat look at standards development for the radio in the early 1930's. Available for $8.

Measurements Development Laboratory of the Sperry Gyroscope Company "Microwave Transmission Design Data" Sperry Gyroscope Company, 1944. Publication No. 23-80. The 215 page hardbound book is in very good condition, clean with no page tears or pen marks, and a strong binding. Originally issued during WWII as a "confidential" document. Chapter topics include General formulae for concentric lines; Attenuation in concentric lines; Reflections and impedance matching; General formulae for wave guides; Attenuation in wave guides; Reflections and impedance matching in wave guides; Wave guide tees and bends; Wave guides filled with dielectric material; Dielectric material: Cavity resonators; and Measurement techniques. A neat early book on ultra-high frequency radio waves. Available for $8.

US War Department "Technical Manual - Radio Fundamentals, TM 11-455" U.S. GPO, 1941. The 140 page softbound book is in fine condition, fresh and clean inside and out except for a previous owners name on the front cover. A nice WWII vintage radio manual. Available for $8.

Morecroft, John H. "Elements of Radio Communication" John Wiley & Sons, 1929. The 269 page hardbound book is in good+ condition. There is a previous owners name inside the front and rear covers, and light pencil marks/notes on many of the pages. Dust jacket has extensive tape reinforcement along the edges. A nice early text on the radio. Available for $10.

If interested in any of the above, please email to "Oldbooks78@aol.com" to reserve. Thanks.

Dave

Well, if you don't mind spending some money --

http://www2.towerhobbies.com/cgi-bin/wti0001p?&I=LXCJG7&P=7

This is a great charger. Not only does it do a great job with my R/C plane batteries, but it does my ham batteries too. It can charge or discharge 1-24 cells, and can do NiCd, NiMH, Li-Ion, Li-Poly or lead acid bateries.

For one battery, you just charge the battery, then set it to discharge at perhaps 1/4 C, and tell it to cut off at 0.9 volts. Once done, you'll know exactly what capacity it has.

As another poster mentioned, the R/C communities know all about batteries. Read their stuff on it, you'll learn a lot. :)

Oh, if you do use a charger like this to charge a battery, be sure to make sure you've got a direct path to the battery itself -- trying to push 1 A through a charge circuit that lights up a LED and such is a great way to let out the magic smoke -- even through the battery can handle it no problem.

If this is too much for you, there are other alternatives, but few are
so flexible for this `little' money.

It's not difficult. I use an supply to power an op amp which senses the
current across a small resistor and drives a power FET. It does fine

down to less than one volt. In fact, it was actually designed to use as a constant current source for charging a NiCd battery from a solar panel, and it does double duty as a constant current load for testing battery and cell capacity.

But be aware that the way they're using batteries is very different from the way you're likely to. So some of the characteristics important to them might not be important to you, and vice versa.

Bruce,

Here is a crude way to do unattended tests. There are any number of cheap battery powered clocks that run off 1 or 2 AA cells; you would use external power instead. Put one of these in parallel with your load, and see how long the clock runs. You could add an opamp to set the trip point to a particular voltage. Use an opamp whose common mode range includes the negative rail.

That's a great idea.

It wouldn't really be important to trip at a particular voltage if you're interested in finding out the capacity, provided that the clock will run at one volt (which any device designed to run from an alkaline cell certainly should)(*). There's very little energy left when a NiCd or NiMH cell reaches one volt, and the cell voltage will drop from there to the point where the clock shuts off in a very short time compared to the total discharge time.

Roy Lewallen, W7EL

(*)Unlike NiCd and NiMH cells, an alkaline cell still has a subtantial amount of energy left when the cell voltage is one volt, assuming a low or moderate load. Well designed devices running from alkaline cells should operate down to about 0.9 volt per cell at low or moderate drain, or about 0.8 volt at heavy drain, in order to extract nearly all the cell's energy. Ideally, a NiCd or NiMH powered device should disconnect from the battery at one volt/cell to prevent reverse charging of a weak cell. Even that isn't sure-fire if there are more than about 5 cells in series, and if one is considerbly weaker than the others.

Geez, brilliant response Frank.  A guy needs help finding a prescaler
and you tell him he just needs a bucket full of transistors.  Why not
vacuum tubes or mechanical counters?

Here's some help for your next project Frank.  Just get a bunch of
wire and solder and electronic parts and stuff and hook it all
together.  Like freshman lab, remember?  But from your communications
style, I suspect you're still in high school.

Nick

I got a Garmin Streetpilot as a present from a Canadian co worker to
experiment with in combination with my transceiver (GPRS).
As I live in Belgium I can't use the built in map (USA). Is there a
possibilty to change the software in the system in such way that it will
show Europe instead of the USA ? I noticed on the Garmin website that there
are two SW upgrades
(http://www.garmin.com/products/streetPilot/download.html) available. Can I
just replace the "Americas" package with the "Atlantic International"
package ?

Kind regards,

KrL

I wonder how one might be able to use a 1-3 farad capacitor to operate a 100
watt HF radio with better regulation and higher average current on SSB.. The
big audio amps use this technique effectively.

Amateur Radio Newsline™ Report 1355 – August 1 2003

A NOTE TO THOSE WHO ONLY “READ” AMATEUR RADIO NEWSLINE(tm)

For those of you who only know of the Amateur Radio Newsline (tm) as a text newsletter we would like to invite you to listen to the audio version. This Amateur Radio Newsline (tm) script is actually written for the “spoken word.” It is recorded each by professional broadcasters and is available for private listening or rebroadcast over your repeater. Two methods of delivery are available: FTP MP3 or dial-in telephone. Please visit our website at http://www.arnewsline.org for a list of telephone numbers (you have to pay your own long distance charges) and links to our voice newscast. On site free FTP Downloads are available at our site by clicking on the newscast number at the top of the page.

de
The Newsline Production Team

Amateur Radio Newsline report number 1355 with a release date of Friday, August 1 2003 to follow in 5-4-3-2-1.

The following is a Q-S-T. Amateur Radio helps solve a murder by tracking down one of its own. Get to know about the ham radio heroes involved in the hunt for a cop killer on Amateur Radio Newsline report number 1355 coming your way right now.

(Billboard Cart Here)

**

ENFORCEMENT OF A DIFFERENT KIND: AMATEUR RADIO HELPS HUNT HAM WHO KILLED MICHIGAN COP

Hams in Michigan were called on to help track down a cop killer after what should have been a routine arrest became a grusome homicide scene. It happened on July 6th. Amateur Radio Newsline’s David Black, KB4KCH, is here with the rest of the story:

--

Never in Michigan's ham radio history has there been a case like Scott Woodring's. It began July 6th. That's when Woodring, KC8JNG, a member of the Christian Identity movement and described as a survivalist, shot and killed a Michigan state police officer. It happened while Woodring was being arrested for solicitation of a minor.

A stand-off ensues and lasts nearly a day. During a law enforcement shift change, Woodring manages to escape, triggering an extensive manhunt throughout western lower Michigan. That's when ham radio operators became involved, since it was suspected that Woodring had been using amateur radio equipment to communicate with other members of his group.

James Wades, WB8SIW, is Michigan's RACES Officer and Section Emergency Coordinator:

--

Wades: “I directed the EC for Newago Co. to establish an intercept peratio in the area and monitor seldom used frequencies in and about he VHF 2 meter band. And, additionally, we sent out a broadcast nouncemnt to selected areas to selected area RACES members thrughout Michigan, essentially asking them to listen for conversations between Mr. Wodring and whomever else he might speak with.”

--

That paid off. A ham in Holton, Michigan reported monitoring Woodring and another operator talking on the air. The intercept was reported to state police they then asked government agencies including the FCC to provide direction finding assistance to find Woodring. But it was a Friday night and police couldn't get any response from the federal agencies. So Wades says investigators turned to radio amateurs for help:

--

Wades: “We deployed amateur radio teams from several counties in the area, and had pretty much a continuous radio direction finding occurring throughout the weekend, with teams from from Kent, Ottawa and Musquogen Counties. We also had teams on standby in Kalamazoo County as well as the Civil Air Patrol team – which weren’t utilized, but it was reassuring to know that they were there”

--

Hams and the police knew the general area where Woodring was believed to be hiding. Wades says it was an eyewitness who ultimately led to Woodring being found:

--

Wades: “Mr. Woodring was discovered through a tip from a citizen who saw him essentially taking shelter in a non working vehicle. When Michigan state police officers approached, he leveled an assault rifle at them and he was subsequently shot to death when he refused t comply with orders or lower the rifle.”

--

Wades says police were hesitant at first to work with radio amateurs. But he says the hams' efforts made a powerful and positive impact with law enforcement agencies.

--

Wades: “When all was said and done the feedback has been incredabally positive. Tremendously good comments about the professionalism and the skills of the radio amateurs involved. And basically I think that they were somewhat – almost shocked at the capabilities and the skill level of our ARES and RACES members in Michigan, which, of course was highly complimentary”

--

Around 40 radio amateurs took part in the effort to help find Woodring. Wades says the hams involved coordinated their work with police carefully, even establishing a dress code for hams reporting on scene with investigators. The professionalism Michigan hams showed has given law officers a new appreciation for the kind of help radio amateurs can provide when it's needed.

From Birmingham Alabama, I’m avid Black, KB4KCH, reporting for the Amateur Radio Newsline.

--

In all, RACES members provided 494 staff-hours to the man hunt. Most of this was contributed during the 36-hour period when radio direction finding activites to locate Woodring were being conducted. (ARNewsline(tm) from lead provided at www.qrz.com)

**

THE FIGHT FOR OUR SPECTRUM: HAM RADO VS. BPL

If you think that the term Broadband Over Powerlines and its acronym BPL will never afect you, guess again. BPL could effectively spell and end to ham radio as we know it. This, if it is ever approved by the FCC and popularized across our nation.

Just how real is the chalange to the survival of the Amateur Radio Service? ARRL Southwestern Division Director Art Goddard, W6XD, gave some graphic details at last weeks Fort Tuthill Hamfest in Arizona based on test data collected by Ed Hare, W1RFI, of the ARRL Lab:

--

Goddard: “If you are an engineer, anywhere from 33 to 63 decibels increase in the noise level thatr you will see at your reciever due to BPL run in the power lines in your neighborhod. If you are into S-Meter readings, thats somewhere between an S-6 and 10 over S-9.”

--

For those unaware, Broadband over Powerlines is a scheme to give consumers and businesses high speed Internet connections using the existing power distribution grid. This would put the power providers in the position of also being broadband internet providers as well. The problem is that powerlines are not shielded. They will act as much like giant antennas as they will a closed carrier of the broadband connection. In other words, whatever is on the power lines will be radiated and heard by your ham band reciever. And Art Goddard says that the Broadband Over Powerline signals will occupy the spectrum from 2 through 80 MHz, meaning every band from 75 meters through 6 meters will be affected.

According to Goddard, BPL has the backing of the White House which views the increased use of unlicensed devices as being good for the U-S economy. He also notes that the FCC – which is supposed to be neutral and regulating in the public interest, is – in this case -- actng like cheerleaders for the proposed service.

Goddard says that this is an issue that the ARRL is keeping a very close eye on. He also indicates that the League may soon be asking ham radio operators to lend their voice in opposition to BPL. (ARNewsline(tm))

**

RESTRUCTURING: NCVEC FILES TO END CW TESTING IN THE USA

The National Conference of Volunteer Examination Coordinators has filed a Petition for Rule Making before the FCC to end Morse testing in the United States. In its July 29th request, the NCVEC asks the FCC for an immediate end of CW testing of applicants.

The NCVEC request is based primarily on the action taken in Geneva at last months World Radiocommunications Conference. At that time, Morse testing as a world standard was abolished, leaving it to individual nations to decide whether or not to continue to administer CW exams.

The NCVEC petition concurs with the WRC findings. It notes an appearance that most of today's radio amateurs want to communicate using voice. Because of this, the NCVEC says that it makes no sense from a regulatory standpoint to require hams to be Morse proficient when the greater majority of radio amateurs show no desire to use the mode. The petition also notes that the future of the hobby now encompasses many new modes that were undreamed of only a few short years ago. It adds that while manual telegraphy is a noble part of Amateur Radio's past, it is no longer the services prime emission mode.

The NCVEC approach will still requires all applicants for an Amateur Service license or upgrade to pass the current written exams. Only Morse testing would be eliminated.

As we go to air no Rule Making designation has been assigned to this request by the FCC. The full text of the petition can be found on our website at www.arnewsline.org (ARNewsline(tm) from NCVEC release)

**

HAM RADIO TESTING: QPC RECALLS QUESTION

Also from the National Conference of Volunteer Examiners Coordinators word that its Question Pool Committee of has withdrawn question T5B04 from the Element 2 Question Pool. This, effective July 27th. This question is withdrawn due to the changes in Part 97 of the Amateur Service rules dealing with the new 60 Meter amateur allocation. (NCVEC)

**

Break 1

From the United States of America, We are the Amateur Radio Newsline, heard on bulletin stations around the world including the WR9ARC repeater of the Riverland Amateur Radio Club serving La Crosse, Wisconsin.

(5 sec pause here)

**

HAM SPECTRUM: ARRL & CQ PRESENTS A PRIMER ON 5 MHZ

And speaking about 60 meters, want to know just about everything there is to know about how to operate legally in this new 5 MHz spot frequencies? Walk, run or drive to your news stand and buy a copy of the August issues of both QST and CQ Magazines. Then go home, settle down and read the articles titled 60 Meters Frequently Asked Questions by Rick Lindquist N1RL and Ed Hare W1RFI in QST and Getting Ready For 60 by Gordon West, WB6NOA. Both are a wealth of information on how to approach this rather specialized allocation and handily compliment one another. We asked Gordo to explain what readers will find in his:

--

West: “One of the things that my CQ Magazine article talked about was the Amateur frequencies And tuning in. There was allot of confusion about what exact frequency one uses for upper sideband on the 60 meter band. As long as everybody remembers that 60 meters – 5 MHz – point 5 -- all of the upper sideband frequencies end with point 5.”

--

And why did her write the article?

--

West: “When I first heard about the band it immediately came to mind as channelized operation that many new hams are not used to. Well, growing up on 10 meter FM as well as 6 meter FM, I knew what channelized operation was all about. And the key word is “sharing.” There’s no QSY'ing – at least not easily on the 60 meter band beyond the 5 channels, so its going to be up to all hams to sort of take turns in using this exciting 60 meter – 5 MHz band.”

--

Where Gordon takes the story telling approach, Lindquist and Hare present their material in pure Question and Answer form. A style of writing that computer enthusiasts call a FAQ. That’s an acronym for the words “Frequently Asked Questions” and the answers that they provide is fact filled, precise and right to the point.

Taken together, “60 Meters Frequently Asked Questions” and “Getting Ready for 60” are the most complete operating guide for the 5 MHz band penned to date. Hams contemplating operation on the five channels that make up the 60 meter allocation would be well advised to read both before hitting the transmit switch.

For more information about subscribing to CQ, visit www.cq-amateur-radio on the world wide web. You can join the ARRL, support its work and begin receiving QST by signing up at www.arrl.org. (ARNewsline(tm))

**

THE WAR ON TERROR: TWO HAMS KILLED IN IRAQ

Two recent casualties of the war in Iraq were amateur radio operators, one American and one from Sri Lanka. The ARRL Letter reports that Specialist Jon Fettig, KCZ0HSQ, of Dickinson, North Dakota, was killed in an ambush on July 22nd.

The following day, Nadisha Yassari Ranmuthu, 4S7NR, an International Red Cross aid worker, was killed and his Iraqi driver was wounded after their vehicle, marked with the Red Cross emblem, came under fire south of Baghdad.   Ranmuthu was 37 and well-known in the Sri Lankin ham radio community. (ARRL)

**

ENFORCEMENT: HAM TOLD HE MUST RESPOND TO FCC QUERRY

A California ham has been told that he had better respond to an earlier FCC letter to him regarding a pair of uncoordinated repeaters that he allegedly operates. Otherwise it could cost him his ham ticket. The agency’s Daryl Duckworth, NN0W, explains:

--

Duckworth: “The Enforcement Bureau has sent a warning letter to WA6SEK, Thomas De Lasaux, of Stockton California, concerning uncoordinated repeaters on 224.660 Mhz and 441.275 Mhz. There has been no response to a letter of May 5th where he had 20 days to reply. He is being afforded an additional 20 days to respond.”

--

According to Duckwoth, if there was no resolution by July 25th, the agency planned to initiate enforcement action against WA6SEK’s Amateur Service license. Its now past that date and we are awaiting word from the FCC as to wheter or not De Lasaux has filed the required reply. (FCC, RAIN)

**

ENFORCEMENT: TRUCKING COMPANY WARNED ABOUT UNLICENSED 10 METER OPERATION

Also receiving a letter from the FCC is the Tidewater Transit Company, Inc. of Kinston, North Carolina. This one warns the company to stop using the 10 meter ham band for its communications or face some rather severe consequences.

In his letter to Tidewather, the FCC's Riley Hollingsworth notes that information before the Commission indicates that a 2002 Volvo truck belonging to Tidewater and bearing North Carolina license plate LK 4130, was the source of radio transmissions on the Ten Meter Amateur Radio band on July 8th. This while it was driving on Interstate 20 near the city of Lexington, South Carolina.

The Letter warned Tidewater that continued unlicensed operation could bring with it a fine of up to $10,000. The owners of Tidewater Transit were also instructed to contact Hollingsworth to discuss the matter with him. (FCC)

**

RESCUE RADIO: HAMS TO THE RESCUE AS CELL PHONES FAIL

Interlinked emergency repeaters played a key role in providing communications during the recent Arizona wildfires.

As learned at last weekends Ft. Tuthill Hamfest, radio amateurs in Navajo County set up repeater links to allow contact between the Red Cross communications center and a number of evacuation sites. This, after it was found that cellular telephone coverage across the area was inadaquite.

The hams stepped in when the walkie-talkie feature of the cellular telephones failed to operate as advertised. The reason appears to have been the small number of relay sites available in the isolated areas where the fires were burning.

The hastilly assembled Amateur Radio relay system along with existing high level Amateur service repeaters are reported to have performed flawlessly. This made possible an ongoing exchange of vital evacuation information. (ARNewsline (tm) from information gathered at Ft. Tuthill Hamfest)

**

RESCUE RADIO: E-911 KIND OF ON HOLD

A lack of funding from cash-strapped state and local governments appears to be slowing the rollout of enhanced 911 services. And in some areas it has put the new wireless emergency phone location service on what appears to be an indefinite hold.

--

Under FCC regulations, wireless companies were required to respond to 911 center requests within six months by providing technology that can locate any individual on a given wireless phone networks who is using a phone equipped to gather information from the global positioning satellite system. This technology lets emergency operators locate cell phone users in need of assistance, but only one in ten emergency call centers has access to it.

But John Melcher, who is the president of the National Emergency Number Association says that moneys earmarked for Enhanced 911 are being spent on other needs. In a recent press statement Melcher charged that some states have diverted millions of dollars
in Enhanced 911 funds collected from consumers and have used the money to subsidize budget shortfalls. This says Melcher puts the public in danger, adding that moneys earmarked on customer billing for Enhanced 911 services should be spent only on Enhanced 911 and nothing else.

For the Amateur Radio Newsline, I'm Bruce Tennant, K6PZW, in Los Angeles.

--

The FCC set specific deadlines for implementing this new service back in 1966. To date, many providers have yet to meet that implementation goal. (Published news reports)

**

RESCUE RADIO: THE INTERNATIONAL AREN NET

Still with rescue radio and emergency communications news, word that the Irish Amateur Radio Emergency Network takes to the air for its regularly scheduled drill session the first Tuesday of each month. The net is at 21:45 local Ireland time. Thats pretty close to UTC, with the net operating on 7 point 043 Mhz on SSB. (Q-News)

**

BREAK 2

This is ham radio news for today's radio amateur. From the United States of America, We are the Amateur Radio Newsline with links to the world from our only official website at www.arnewsline.org and being relayed by the volunteer services of the following radio amateur:

(5 sec pause here)

**

EMERGING TECHNOLOGY: WI-FI SPEED INCREASED 4X

The most widely used wireless local area network protocol, IEEE Standard 802.11, also known as Wi-Fi, was extended last month to make it four times faster. The CGC Communicator reports that the new standard, IEEE 802.11g transmits data at up to 54 Megabits per second. Thats up from 11 megabytes per second as was called for in Wi-Fi standard 802.11b. (CGC Communicator)

(DO NOT READ: CGC)

**

INTERNATIONAL - ASIA: NON HAMS INVADING THE 7, 10 AND 14 MHz HANDS

The increasing use of more frequencies on various ham radio bands by the Indonesians and other South East Asian non amateurs for their personal or business traffic, is becoming a very serious problem. Q-News reports that the Indonesians are using the lower 40 kHz of 40 meters, and frequencies around 14 point 100 MHz in the 20 Meter band most of the time.

Nor have they spared the 10 MHz allocation. There unlicensed oprators are regularly heard in the 10.0 to 10.1 MHz segment which primarily carries international air traffic control communications.

Q-News notes that this is a very serious situation. One which could endanger the lives and safety of air travelers in ITU Region 3 and a situation that needs to be to be dealt with quickly at the highest levels of international diplomacy. (Q-News)

**

INTERNATIONAL - UK: BBC HELPS THE BLIND

The British Broadcasting Company is playing a crucial role in developing new radio equipment that could help increase number of visually-impaired people working at the organization. Across the UK, BBC local radio stations are converrting from analog to digital equipment. The digital equipment is designed to make life easy for full-sighted broadcast journalists, using a visual touch-screen system, which is why it needs to be adapted for visually-impaired people.

Now comes word that Claire Jennings, who is the the BBC’s Disability Advisor for Technology, has been working alongside technology company Calrec. This, to design a digital radio broadcast mixing console that is user-friendly for visually-impaired radio producers

The BBC has spent the past few months working with Calrec to adapt the broadcast desk and with BBC Technology to extend the touch-screen control system so that it can convert text into speech and be controlled using a standard keyboard. As well as controlling sources to faders on the Calrec, the BBC system can control most other hardware in a similar manner.

The entire story may be found in cyberspace www.bbctechnology.com/newsarchive4.htm. (Media Network)

**

SPACE: NASA TEAMS WITH LOCAL LIBRARIES TO DELIVER -- SPACE

NASA and the American Library Association have partnered to create a one-of-a-kind interactive space research exhibit. This, as part of a new program called NASA @ your library.

The unique exhibit will tour 120 public libraries in five regions across the nation for the next two years. It will feature special presentations specifically created to expose people of all ages to NASA research in the areas of health, home and transportation, agriculture and environment, and commerce.

The program was recently launched at the Enoch Pratt Free Library in Baltimore. NASA @ your library was created to inspire more participation at public libraries, raise awareness and encourage interest in science. (NASA)

**

CONTEST CALENDAR: FISTS C2C IN SEPTEMBER

Mark September 13th and 14th on your calendar for the third outing of the annual Fists Coast to Coast contest. This year the contest will run a full 24 hours beginning at 5 P.M. Pacific Daylight Time on September 13th and concluding at 5 P.M. on the 14th. That corresponds 0000 to 2400 UTC on September 14.

This year the rules are easier to understand and the sponsors say that there is the potential for higher scores due to the use of multipliers. The URL for rules and awards is complex and appears in the print edition of this report. If you have questions, please e-mail them to Paul Beringer NG7Z at fistsc2c@yahoo.com. On-line information is at www.tomochka.com/k7fff/fnw_c2c03.html. (FISTS)

**

DX

In D-X, word that two separate groups will be operating from Swaziland through the 3rd of August. K4SV and VA7DX will be active as 3DA0SV and 3DA0WC. Four South African operators will be on as 3DA0DX between the same dates. QSL each group as directed on the air. (GB2RS)

**

THAT FINAL ITEM: ARNEWSLINE TAKES YOU TO A HAM RADIO BALLON LAUNCH

And finally this week, take a listen to this:

--
“15,790 feet. Course 44 degrees moving at 10 miles an hour.”
--

That’s the report of one of the controllers tracking a high altitude ham radio balloon launch that took place Saturday, July 26th at the Fort Tuthill Hamfest just outside of Flagstaff Arizona.

The launch was sponsored by hams belonging to Arizona Near Space Research. Brian Bingham is a Physics teacher from Deer Valley High School in Glendale, Arizona, who came out to take part in the launch. He says that many of those assisting are also educators who want to bring space a bit closer to their classrooms:

--

Bingham: “Most of the people you see out here helping are that group and a group of Arizona high school teachers that are going to be taking on some of the balloon launches. They will have teams from their schools do balloon launches through the NASA Arizona Space Grant.”

--

Bingham, who was a radio amateur many years ago described the system being readied to be sent aloft:

--

Bingham: “You can see a small package down here. It was built by one of the teams from a workshop and contains temperature sensors, humidity sensors, a small still camera, solar cells all in something just a little over a pound in weight. It has telemetry equipment with GPS position via satellite and transmits it back so that we an track it on the ground and recover the equipment.”

--

And how high will it all go?

--

Bingham: The balloon will go up to somewhere in the neighborhood of 100,000 feet. The balloon will also swell to somewhere about forty feet in diameter before it finally bursts. And then the parachute will bring it back down to Earth.

--

Brian Bingham says that his students will soon be choosing a project of their own to launch to the edge of space on a future balloon flight. It will be another educational experience made possible through the cooperative efforts of NASA, the educational community and ham radio. (ARNewsline(tm))

Hi Bill,

The SEA and Midland LMR 220Mhz repeaters & radios are now appearing on the surplus market, pulled from the (now bankrupt) narrow band trunking systems.

Securecor and Intek were large 220 smr operators in the late 90's. They had systems out here on on the US West Coast from Texas to Alaska.

They are hybrid ACSB units, the LMR and SEA formats do not work with the other.

SEA is still on line selling repeaters, however they probably wont do a lot to help you convert the equipment to Amateur Operation.

Two Surplus Dealers are selling used ACSB radios and some repeaters, look for them using the Ebay IDs of erac and rhoadeseller (might be rhodeseller).

I bought much/most of the 220 antenna combiner equipment as it is very high quality (Sinclair, Decibel, Wacom & Telewave) gear, of which I'm slowly parting out to get some of my money back. Watch for my auctions on Ebay if you have interest in this sort of stuff.

You might be able to make some of the radios talk to each other on simplex (direct), then figure a way to move them up onto the amateur band after you get the programming right, but it's not a beginers task.

There are a few 220 smr system operators still in operation around the country, you might do a reverse lookup on the fcc web page and contact those people you can find for information.

cheers
skipp

Sure, but then you have a "moderator" that assures all posts fit
his/her point of view. Any others get the shaft. Not to mention that
you generally have to  sign up for most of these "yahoo groups". Not
to mention the spam upgrades...
>
> Search for "Amateur Radio" get over 1200 places to discuss your interests,

Stupidity has no borders. You can be just as ignorant and misleading
on a yahoo group as you can be on usenet. And the worst part? The
moderator, if so inclined, can censor other posts to make it look as
if the stupidity is in fact correct and valid data.

>
> Lots of Elmers have left here and are now on Yahoo Groups.

Who cares....Don't let the door spank em in the differential on the
way out. You won't catch me on any of them. I've seen some use those
moderated groups to censor others, and to promote lost causes that
normally would be uncovered in the free world of usenet. As far as
junk, I don't read it. If you see a dog dropping on the sidewalk, do
you automatically go over and step in it? I sure don't. :/  MK

I avoid Yahoo like the plague. Too much spam
My cousin (rest his soul) talked me into joining him on one of the
groups. I received spam that I could trace to that one visit for
close to three months.

>http://groups.yahoo.com/
>
>Search for "Amateur Radio" get over 1200 places to discuss your interests,

Too much moderation which leaves many of the groups slanted.
I much prefer open discussion even if it does bring out a few of the
nut cases now and then.

>
>Lots of Elmers have left here and are now on Yahoo Groups.

They should come back to the open world where more new people are
likely to show up. These are the places they find on a search that
are easily accessed without having to give away any personal

information.

Not you Mark -- the other two.

Your record of helping folks on the NG's is exemplary as evidenced by using the google group search.

Kudos to you -- In the finest traditions of Amateur Radio.

Thanks

Guidelines keep order out of chaos -- ain't a bad thing really. I just hate to open a NG and see 15 Bush-Bashs, 20 Pro/Anti Gay messages, 12 ANTI whatever and very few Amateur radio topics. It is really a mess compared to just a few years back.
Bad enough for one to consider a moderated NG which I don't care for -- but at least the posts are on topic.

The Old Elmer who is a Keyboard in the Wilderness.

Yeah I know how to filter and ignore, and about the door, but a protest every once in a while is in order.

Ok, but being you "clipped" my post, you can see how I thought you
were referring to me...

To me , there is no other option. I'll never go to a moderated group.
So the only solution is just to ignore the OT's. At least they don't
seem to mislabel their posts. Also, probably 90% comes from maybe two
or three people that constantly spew their mess every day or two.  MK

Hello Group:

I have a Model 630-PLK Triplett VOM that needs its 30Volt battery
replaced. Presently, there is an Eveready Energizer No. 413 NEDA 30
VOLTS installed.

Can anyone here advise me of a source for a suitable replacement
battery ?

Thank.
Vince

Vince -- from URL:
http://www.triplett.com/serv_faq.htm

Model 60NA, 630/630A, 630NA/NS/PL/PLK/APL/APLK, 30 Volt. Eveready #413 is
stocked by many industrial electronics supply houses, or can be purchased
from Triplett as part number 37-19.

Using Google.com   comes up with several suppliers

http://www.google.com/

Use of a non-PC based logbook precludes the advantages of quick lookup
of previous QSOs and generating an ADIF file output that can be later
uploaded to www.eQSL.cc or the ARRL's LotW system (once the beta
testing is completed).  I prefer to use,  and have been for years, the
eQSL.cc server.

Well, one could construct an ADIF file from one's paper log. To stay firmly
rooted in 1950's technology, one could use a model 27 teletype, punching the
ADIF onto paper tape. I'm sure N5UP at eQSL.cc would find a way to read
it...

I'm taking my Technician-class exam soon, and am going to be needing a radio.
I have very little money available to invest in this, so I was wondering if somebody had one they didn't need and could sell for cheap.
A simple 2-meter transceiver will work fine for me; I've heard it's a popular band. However, a multiband one would be nice...
I've only got about $50 max to spend here, maybe a tiny bit more. I'd be willing to build or scrounge up some pieces, e.g. speaker box, microphone, antenna, cables, etc. so if it's missing a few accessories, that's OK.
Can someone help me out?

Thanks!

I have a nice older radio in good condition that I could sell you for $50 plus shipping. Shipping to San Jose shouldn't be much at all. E-mail me, the mail's good.

Old DXer,

Thanks for the reply. With the recent security advisories on
potential conversions of cameras and other equipment to weapons, I
have reluctantly elected not to take radio equipment with me at all.

My main concern is that at some point on the trip, a security
checkpoint will not understand the equipment is safe and (rightly)
refuse to allow it past. I might lose the equipment, which I can't
afford to risk. (Mind you, I would expect and WANT the security folks
to refuse allowing it if they didn't understand it - that's the whole
point. I just don't want to lose the gear.) Airlines are even
advising people not to bring cameras and phones on board, which of
course are often the main point of the trip in the first place.
(Cameras for vacations, phones for business.)

It's sad that it comes to this.

John

Also ironic that if you put it in checked luggage, it is likely to be
stolen, even with all of the security.

They haven't figured out that if it is easy for somebody to take
(valuable) things out of your luggage, it is just as easy for them to
put something (bad) in.

I would still figure on carry on, but allowing extra time, and going
to a supervisor as needed. Have everything charged and ready to show
that it is operational.

Happy trails,
Gary (net.yogi.bear)

Amateur Radio Newsline™ Report 1356 - August 8 2003

Amateur Radio Newsline report number 1356 with a release date of Friday, August 8 2003 to follow in 5-4-3-2-1.

The following is a Q-S-T.

The ARRL tells the FCC to set R-F-I immunity standards for consumer electronic gear, the FCC says it won't decide the merits of a California frequency coordinators actions, and the price of a vanity call sign is going up again. These stories and more follow on Amateur Radio Newsline report number 1356 coming your way right now.

(Billboard Cart Here)

**

RADIO LAW: ARRL TELLS FCC TO SET INTERFERENCE REJECTION STANDARDS

The ARRL has told the FCC that improved interference standards for consumer electronic devices is among the most pressing needs being faced by the ham radio community. This, as the Commission considers the interference immunity performance of receivers. Amateur Radio Newsline's Bruce Tennant, K6PZW, has more:

--

The ARRL made its position known in comments July 21st in response to an FCC Notice of Inquiry titled Interference Immunity Performance Specifications for Radio Receivers. That probe was released last March as ET docket 03-65. In its filing the ARRL says that no receiver immunity standards are necessary or practical in the "essentially experimental" Amateur Service. Instead, says the ARRL, the real need for receiver immunity specifications is in the area of consumer electronics and the FCC must establish stronger interference rejection standards for such devices.

The ARRL's 21 page reply also recounted the recent history of efforts to come to grips with interference from RF sources, including amateur stations, to receivers used in other services, such as TV and radio broadcasting, and to consumer electronics. The ARRL suggested that the FCC mandate a standard for all consumer electronics or adopt a labeling or grading system. It also suggested that the FCC not rely exclusively on manufacturers to set standards as a way of lessening the problem.

For the Amateur Radio Newsline, I'm Bruce Tennant, K6PZW, in Los Angeles.

--

The politically powerful Electronic Industries Association which represents the manufacturers of consumer electronic gear is categorically opposed mandatory RFI immunity standards. (ARRL)

**

RADIO LAW: FCC REFUSES TO DECIDE ON MERITS OF COORDINATORS ACTIONS

The FCC has told the attorney for one side in a California coordination dispute that it will not offer any opinion on the actions of the local frequency coordinator. This most likely means that a rumored law suit in the mater may now proceed to court.

Attorney Ted Smith of Santa Rosa California had written to the FCC on July 3rd. In part, Smith asked for the Commission decide if the Northern Amateur Relay Council of California's revocation of the Sonoma County Repeater Association coordination status exceeded the coordinators authority under the organizations bylaws, policies, and procedures, or if the Commission consider such an issue a local matter.

But in his July 15th reply, FCC Special Counsel for Amateur Radio Enforcement Riley Hollingswoth states that the Commission does not anticipate making a such decision on the merits of Northern Amateur Relay Council of California's action. He also stated that the Commission considers coordination in the Amateur Radio Service a matter more appropriate for the parties to resolve among themselves locally, or by mediation, dispute resolution or in the local courts.

With the FCC declining not to take any stand in regard to the merits of the Northern Amateur Relay Council position in the dispute between the W6SON and KD6LSO repeaters, it appears as if the decision of the coordination council will stand unless a expected legal challenge goes ahead. Its also a sure bet that repeater coordinators across the nation will be keeping a very close eye on what happens in Northern California if this issue actually goes into court. (FCC, ARNewsline(tm))

**

RADIO RULES: VANITY FEES GOING UP IN SEPTEMBER

The cost of getting a vanity call sign is going up again this fall. This as the FCC announces that the the ten year license term fee for a vanity call will rise to $16.30 for as of September 9th.

The action to raise the fees comes in answer to petirtions from the ham community to eliminate the fee completely. But the FCC says it expects to collect close to $160,000 from 9800 Amateur Radio vanity call sign applicants during Fiscal Year 2003. That's up by almost $30,000 and 800 applications from Fiscal Year 2002.

Applicants for vanity callsigns will continue to pay the $14.50 fee until the new fee goes into effect in September. Further details on the FCC's position and its response to amateur requests to eliminate the fee can be found in cyberspace at www.arrl.org (ARRL, FCC)

**

RESTRUCTURING: NCVEC NO-CODE PROPOSAL GETS LITTLE AIR TALK TIME

The petition by the National Conference of Volunteer Examiner Coordinators to the FCC to end Morse testing in the United States is getting allot of discussion in cycerspace, but apparently very little on the air. Over the past week the Amateur Radio Newsline team has monitored the ham bands to try to gauge on-the air reaction and so far there does not seem to be very much at all. An occasional mention of the proposal is about all thats been heard over the past 7 days.

But the opposite is true in cyberspace where the NCVEC petition has become the hot topic of discussion in places like the rec.radio.policy newsgroup and on qrz.com. As far as we can tell, qrz.com com has the most interesting discussion of all. Most of the comments are well thought out with very little in the way of rhetoric. So far close to 350 hams have dropped by to add their voice to the discussion. To read what they have to say or add your thoughts, please take your web browser over to www.qrz.com and scroll down to the topic titled NCVEC files no code petition. (ARNewsline (tm))

(5 sec pause here)

**

HAM TESTS: GUNFIRE CAUSES HAM TEST CANCELLATION

I'm Bill Pasternak, WA6ITF, with a late breaking story. Dateline Ventura County California where gunplay has caused the cancellation of a ham radio test session slated for Sunday August 10th.

The exams we to be held at the East Valley Sheriff Station in the city of Thousand Oaks. The session was canceled following an incident earlier in the week where a disgruntled man drove up and attacked Ventura County sheriff's deputies with a gun. No one in the building was injured. The deputies responded and killed the attacker.

But as a result of her gunfire the community room where the ham radio tests are held was damaged. It's also considered as a part of the crime scene and is off limits to the public until further notice.

The Conejo Valley Amateur Radio Club is the group that sponsors the bi-monthly test sessions. It says that it hopes to resume its normal exam schedule in October. (AA6JR)

**

INTRUDER WATCH: MORE CB'ERS ON 10 METERS

Sunspots activity may be down but that's not keeping rogue CB'ers and other intruders off the 10 meter band and spectrum near-by. Q-News reports that while normal ham radio activity on the 21, 24 and 28 MHz bands is down, occasional openings of the 10 meter band shows a number of unlicensed long line fishing net beacons in operation. Also being heard is Citizens Band radio type traffic in the band. Q-News also says that CODAR pulse transmissions in the region 24.950 to 24.995 MHz are continuing and are sill unidentified. (Q-News)

**

RADIO LAW: UK HAMS OBJECT TO RADIO SHOW ON BPL

Last week we reported on the signal degradation that Amateurs in the United States will face if the FCC permits power companies to become suppliers of broadband Internet. But US hams are not alone. The United Kingdom's national ham radio society is angry at a report by the BBC that touts the system without telling the other side. They say the report is not fair and balanced. RSGB news reader Jeramy Boot, G4NJH, is here with the rest of the story:

--

The RSGB has contacted the BBC to point out its objections to an item on the BBC TV 6 o'clock News on Thursday the 24th of July. The item referred to the use of the electricity supply as a medium for Internet access. This is variously referred to as PLT, PLC or Powerline Communication.

The following is a quote from the e-mail sent to the BBC TV News: "The news item was unbalanced in that no mention was made to the very serious problems of radio interference inherent in Powerline technology. At the present time there is strong disagreement as to how much radio interference should be permitted. Needless to say radio interests, which besides ourselves, include the BBC and many other organisations are anxious that radio interference should be minimised."

The e-mail went on to point out the difference between the systems based on ADSL technology, which are currently being deployed in considerable numbers, and the proposed PLT systems.

Jeramy Boot, G4NJH.
--

At airtime, it is not known if BBC 6 plans a follow up report giving the negatives of BPL. An interesting article on Broadband Over Powerline communications is available by clicking the link marked "powerline communications" on the RSGB website at www.rsgb.org. (GB2RS)

**

RESTRUCTURING: DENMARK GIVES HAMS 70 MHZ

Amateurs in Denmark have been given permission to operate on the 70 MHz band.   This, according to OZ2M who says that three frequencies are available at 70.025, 70.050 and 70.100mhz.

Individual applications have to be filed for the relevant frequencies and the maximum power is 25 watts, but there are no other restrictions. In other words, the 70 MHz allocation is available to all license classes in Denmark and all modes may be used. (UBE)

**

RESCUE RADIO: FIRES DAMAGES TWO REPEATER INTERTIES

Back here in the United States, Arizona wildfires have damaged two repeater newtworks. Blazes wiped out repeater relay links on Mount Lemmon, Arizona, for both the Zia Connection and the Cactus Intertie. Both are wide area linking networks. The fires occurred in mid July. (Repeater Owners Remailer)

**

RESCUE RADIO: ECHOLINK ASSISTS DURING HURRICANE CLAUDETTE

Traditional ham radio communications during Hurricane Claudette in Texas in July were augmented by an Echolink connection keeping key players in constant contact. According to the ARRL Letter, the Nacogdoches Amateur Radio Club used Echolink to tie together coastal repeaters, the National Hurricane Center, the National Weather Service, the Texas Department of Public Safety and most coastal emergency operating centers. Club spokesman Tim Lewallen, KD5ING, said that at the height of the storm, there was "almost constant" activity on the link, mostly between the National Hurricane Center and ham spotters providing real-time, first-hand reports. (ARRL)

**

ENFORCEMENT: $8,000 FINE AFFIRMED FOR FAILURE TO INSTALL EAS EQUIPMENT

The FCC has affirmed an $8,000 fine against WENA of Yauco, Puerto Rico. This for the stations failure to install Emergency Alert System equipment. The FCC says that Puerto Rico is a possession of the U.S., and is therefore governed by the it's Regulations and rules. The complete story is in cyberspace at: http://hraunfoss.fcc.gov/edocs_public/attachmatch/DA-03-2360A1.doc (CGC)

**

AT THE COMMISSION: FCC OFFERS FREE WiFi TO VISITORS

The FCC says that it will provide free wireless Internet access to visitors at its Washington, D.C. office, but there are a few caviats. Visitors must bring their own hardware and software and can use the service only in two specific locations. The FCC alao says that it won't provide any technical support. More is on-line at http://hraunfoss.fcc.gov/edocs_public/attachmatch/DOC-237306A1.doc (FCC)

**

RADIO POLITICS: PRINTER ERROR IN AMSAT BALLOTS

An error by AMSAT's printer has resulted in a reprinting and remailing of ballots for the amateur satellite organization's board of directors.

The CQ website reports that the mailing included biographies for candidates from a past election. As a result, the original white ballot cards sent out with the first mailing will not be counted. If you never mailed yours in simply disguard it.

Only the replacement yellow ballot cards sent in the second mailing will be accepted as valid votes by AMSAT members. These are due at AMSAT headquarters by September 15.

By the way, AMSAT is not ouut any money on this one. The printer bore the total cost of the reprinting and remailing. (ANS)

**

BREAK 2

This is ham radio news for today's radio amateur. From the United States of America, We are the Amateur Radio Newsline with links to the world from our only official website at www.arnewsline.org and being relayed by the volunteer services of the following radio amateur:

(5 sec pause here)

**

NAMES IN THE NEWS: A WEB PAGE FOR NIKOLA TESLA HISTORIANS

In the world of electronics and telecommunications, inventor Nikola Tesla was one of the more mysterious of our early technological pioneers. His experiments and demonstrations caused some to believe he was a genius, while others had to wonder if he was engaged in witchcraft.

Much of what he wrote nearly a century ago still evades our understanding. If you're intrigued by the man and his specific visionary approaches to physics, you can visit his selected writings at www.tfcbooks.com/tesla/contents.htm (CGC)

**

NAMES IN THE NEWS: KA3HDO PROMOTED AT NASA

Amateur Radio on the International Space Station Chairman Frank Bauer, KA3HDO, has been promoted to the highest technical rank accorded a NASA scientist or engineer. Bauer, who works at NASA Goddard Space Flight Center in Maryland has been named as a Special Technical or S-T. This, in recognition of his record of exceptional technical achievement in the field of guidance, navigation and control.

KA3HDO's promotion came through in time for him to be appointed to the NASA deputy administrator's new blue ribbon panel on Alternatives to the Orbital Space Plane. Bernard Seery, chief of the Mission Engineering and Systems Analysis Division in the Applied Engineering and Technology Directorate, said Bauer's new ST rank formally recognizes him as a lead guidance, navigation and control expert at the Agency level. (ANS)

**

HAM RADIO IN SPACE: AN ALL HAM CREW FOR ISS EDITION 8

The ARRL reports that both members of the recently-announced Expedition 8 crew for the International Space Station are hams. Astronaut Mike Foale, KB5UAC, will be the crew commander and science officer. Cosmonaut Alexander Kaleri, U8MIR, will be I-S-S flight engineer and commander of the Soyuz capsule used to transport the crew members to and from orbit.

Both Foale and Kaleri are veterans of the Mir space station. They'll be joined briefly by a third ham, Spain's Pedro Duque, licensed in the U.S. as KC5RGG, who will represent the European Space Agency. Duque will return to Earth with the departing Expedition 7 crew. The crew exchange is scheduled for mid-October. (ARRL)

**

INTERNATIONAL-UK: HAMS AT GASS 2003

Amateur Radio will be a part of a major science exhibition down-under. Q-News Graham Kemp. VK4BB, reports:

--

The Great Australian Science Show (GASS) will be held in conjunction with National Science Week at the Melbourne Museum, and amateur radio is to be on display for three days.

WIA Victoria with the help of its member clubs are participating in the show, for three days from Saturday 16, Sunday 17, and Monday 18 of August. The Melbourne Museum is open from 10am to 5pm.

Displays of IRLP, Morse code, VHF Transceivers, Crystal sets, ARDF equipment, Satellite tracking software, Power Point Computer Displays and more are planned.

--

Again, those dates are August 16, 17 and 18 at the Melbourne Museum in Melbourne Australia. (Q-News)

**

ON THE AIR: UK HAM TO DO SUMMIT BACKPACK

On the air, word that Richard Newstead, G3CWI, is planning a long solo ham radio backpacking trip across the hills of South Wales this month. His objective is to activate 15 of the hills in the Brecon Beacons National Park on 40-meter CW for the U-K's Summits on the Air award program.

The walk will be over 90 miles with a nearly 25,000 feet of ascent. In addition to the High Frequency radio gear, G3CWI will be carrying all his own food and camping equipment. The walk is expected to be completed by the 17th of August. (RSGB)

**

ON THE AIR: RUSSIAN POLAR MOUNTAIN EXPEDITION.

And speaking high locations, word that the Russian Robinson Club plans to be active as R3RRC/9 from August 14th to the 25th from the Polar Ural Mountains. Their operations will be on both the H-F and VHF bands. If you can read Russian, more information is available on the web page link you will find in this weeks print edition of the Amateur Radio Newsline report. More is on-line at www.hamradio.ru/rrc/AWARDS/rma.htm
QSL via UA3SGV: Andy Blinushov, P.B. 180, Ryazan-35, Russia, 390035.
(OPDX)

**

DX

In D-X, word that M0GMT, and DJ9AO, are teaming up for an ambitious DXpedition to Cambodia running through the 18th of August. hey will use the callsign XU7ACT for normal operation and XU7ACU for the WAE CW Contest on August 9th and 10th. QSL's for both calls go via G3SWH. (GB2RS)

And N6XIV/KH9 is expected to be active again from Wake Island for about three weeks. This will be his last Wake Island work assignment for 2003. He operates on SSB only whenever possible during his very limited spare time. (GB2RS)

Lastly, word from Great Britain that nominations are being sought for the G5RP Trophy. This is an annual award to encourage newcomers to High Frequency D-X'ing and is awarded for making recent rapid progress in D-Xing, which only newcomers have the scope to do. Nominations should be sent to Colin Thomas, G3PSM, by e-mail to hf.chairman@rsgb.org.uk Nominations must be received by the 31st of August at the latest. (GB2RS)

**

THAT FINAL ITEM: THE NIGERERIAN SCAMMERS ARE AT IT AGAIN

And finally this week, theres another scam involving Nigeria and this one is targeting Amateur Radio. But this time a ham has outwhitted the alleged scammer. We have more in this report:

--

It all started about a month ago. That's when Jeff Novak, KB3DIV, of Lucinda, Pennsylvania, placed an ad on the QRZ dot com website to sell his Yaesu VX5 hand held. And in a follow-up posting to that website, Novak tells the story of what happened next.

KB3DIV says that he was soon contacted through e-mail by a person identifying himself as James Cruise. Cruise who stated he was from Africa and that he wanted to purchase the unit.

To make a long story short Cruise insisted that a contact here in the United States would send Novak a check for 4800 dollars. Cruise wanted

Novak to deduct the purchase price of his HT along with shipping cost and send him a moneygram for the difference.

Soon, Novak received a bank draft for the 4800 dollars. Several phone messages were also left on Novak's cell phone from Cruise. These urged KB3DIV to quickly send him the difference and H-T.

But Novak became very suspicious. So he called the F.B.I. and explained what had transpired. They told KB3DIV that the supposed bank draft is a actually a credit card check and most likely already void. Also that the person calling himself James Cruise was most likely a scam artist. In other words, had he cashed it and sent Cruise the balance, the chances are that his bank would have dinged him for the amount of the bounced check and he would have been out his VX5 to boot.

But in this case the targeted victim was allot smarter than the alleged con artist. He asked the F.B.I. what to do. It advised Novak to destroy the check. He did, and also informed the person calling himself James Cruise that the deal was dead. And when it was all over, KB3DIV still had his VX5, and it was the person allegedly trying to scam him that was - proverbially -- left holding the bag.

For the Amateur Radio Newsline, I'm Mark Abramovich, NT3V, in Philadelphia.

--

Score one for a rather smart ham.

**

NEWSCAST CLOSE

With thanks to Alan Labs, Amateur News Weekly, AMSAT, the ARRL, the CGC Communicator, CQ Magazine, the FCC, the Ohio Penn DX Bulletin, Radio Netherlands, Rain, the RSGB and Australia's Q-News, that's all from the Amateur Radio Newsline(tm). Our e-mail address is newsline @arnewsline.org. More information is available at Amateur Radio Newsline's(tm) only official website located at www.arnewsline.org. Go To USPS URL:
http://ircalc.usps.gov/
Use Calculator to determine overseas postage (not the same as domestic)

To Brazil
Airmail Letter Post 4 - 7 Days $0.80 Max. length 24", Max. length, height, depth combined 36"

If you want to include return postage - tis a different problem.
Because the USA has 600,000 Amateurs and Brazil has only about 27,000 many USA DXers send return postage to help from driving the DX stations broke.

Without the return postage the DX may send it via the bureau. See bureaus below:

For return postage --- See URL:

http://www.qsl.net/n6dhz/irc-chart.html

Has how many dollar bills to send or how many IRC's, so the DX has sufficient postage to return your card. For Brazil, a dollar or one IRC will be sufficient.

An IRC is available at the US Post Offices (Main and Big ones) and an explanation of what they are is at URL:
http://www.upu.int/irc/en/index.html

Another way is:

You will likely work many Brazilian Stations so a better way is to work a dozen or more and send them via the ARRL outgoing Bureau -- URL:
http://www.arrl.org/qsl/qslout.html
There you can send 10 cards or less for just $1.00
But you must be an ARRL Member

The incoming ARRL Bureau system (no ARRL Membership required) can be found at URL:
http://www.arrl.org/qsl/qslin.html

If you work even a few DX stations and want the cards -- then join the ARRL incoming bureau system.

Lot more to QSLing

AC6V Has a book on DXing and devotes a whole Chapter to QSLing -- See his site at URL:
http://ac6v.com/DXSAMPLE.htm

73 es GD DX
The Old DXer
AKA the "Keyboard in the wilderness" who must remain ANON

A standard post card or envelope under 1 ounce will cost $.80 going to Brazil. If you go to your post office, they can sell you an $.80 stamp or put a meter strip on it with a value of $.80.

I'd recommend that you request the post office put a meter strip on it instead of a stamp. US stamps have a tendancy of being stolen off of envelopes in some countries, resulting in the mail never making it to the intended receiver. Some mail clerks will get a little ticked off at having to make this extra effort, but it's for the best.

Hi All,

Any sucessful builders of the DDS VFO from the QEX 97 magazine (design by Curtis WB2V) ?

I have the old version of the PC board and I am using the version 3a PIC program by Bruce (AA0ED). The changes on the PC board on the pin2 of the PIC side (as suggested by Bruce) have been made. But I realized that there are some changes to be done on the PC board at the AD9850 side. These are not available on the web.

Kindly send me the details by mail or can be posted on this site.

-Thanks in advance
Vasudeva (VU3BIP)

I remember seeing something about that problem abut can't find the answer. Try looking at the site where you downloaded Digi Pan or do a google search.

There are some DX nets that can be interesting. And you can work DX fairly easily.
All times are approx. and in GMT
1200: 14.226 is the Southern Cross DX net.
Right after that night about 1400 or 1500 is the W7PHO Family Hour DX net.
About 1700 or 1800 there are two nets on 15 meters. 21.335 and another at 21.345

In the afternoons about 2100 or so there is another DX net on at 14.243.
There is the HHH Net on every night at about 0600 or 0700 on 7.235
And there are the Century Club nets on 40 and 80 meters in the evenings.
3.905 and 7.230 I think. Also in the winter they have a 160 meter WAS net.
You can go to the Century Club web page and get their info.
There are many 10-10 nets all over. I imagine that the 10-10 or 10-X main has a web page.

I looked at the specifications for an old pair of Maxon GMRS 210+3
radios, and thats exactly what I want. Its programmable, has two sets
of commonly used frequencies and is pretty powerfull. Does anyone out
there make something like the 210+3? From Maxon or anybody else.
Thanks!

Hi all,
I am having a spot of bother with prescaler chips. Basically I need to find one at the right price and availability. US$5 each is reasonable, but where from? Is there one available that is not obsolete?

I live in Sweden and my local component shop is ELFA (Swedens answer to RS). They don't sell ANY digital divider that operates above 50MHz, except for the 74F163 and I cannot come up with a reliable interface circuit to couple an oscillator into it at over 100MHz.

I found the MB501 (MC12022, SP8704) but it is obsolete and cannot find a reliable source. I bought a couple, but that source dried up. All I need is a divider chip that will accept a small signal up to 150MHz, is available, cheap(ish) and will divide down to under 10MHz so that I can use CMOS to process a synthesiser. A parallel-load synthesiser chip with in-built 150MHz prescaler would do.

I have used "Teleport" to download over 50,000 pdf datasheets without any luck. I have gone through most of them, but it takes a fair bit of time. If anyone has a helpful suggestion I would appreciate it.

BR from Harry - SM0VPO

Man, if THIS ain't a trip -- a well-known, over-rated internet homebrew tech
asking for help for a simple prescaler. Hey Harry, don't you know that the basic
freshman-lab-grade Class B or C amplifier is nothing more than a divide-by-2
counter? If you have a bunch of 2N2222's, 2N2907's, or any transistor with an Ft
above your high-freq limit, you have a divide-by-(n x 2) counter. Any advanced
homebrewer should know that stuff cause it's basic theory.

And for you to post such a question in alt.radio.pirate.... that's pretty
pathetic, Harry.

> Any Ideas??

Hard to say. Some said ME or 2000 could be the problem. I had this
problem recently on a 98 box, but the program I had the problem with
was a direct X program that relied on dx drivers. I would think
digipan used the normal windows sound drivers. Anyway, for some goofy
reason, the program I tried didn't like my existing dx drivers,
although every other dx program I use, did. . So I got on the net and
d/led the latest drivers for my card.
For some goofy reason, it fixed the problem. So anyway, you might try
the latest drivers for your card just as a test. MK

If you can live with a larger and binary division, there would be
a prescaler that likely does work to that frequency limit in any
digitally tuned FM broadcast radio. I have not looked up the
upper frequency limit on these, but of course their needed range
isn't much lower than your upper limit. I don't have a specific
part number, I'm not even sure how much variety of ICs are used
in these applications, but just about any scrap digitally tuned
radio would offer up something. And if you need to find something
commonly available but not rely on scrounging, then open one
up and find the NTE replacement for the prescaler.

I'd be inclined to use a CPLD. The Xilinx XC9536 would be good to over 150
MHz and a suitable synchronous counter is quite trivial.

Hi,

I had bought a RadioShack HTX 202 HT back in January of 1993 new, and has worked well for me. I just turned the radio on a few minutes ago and got an Er 1 message. Seems like about five years ago I got the same thing and they changed out an internal battery in the HT. I was just looking through the Radio Shack Web Site and seems like they do not sell an HTs, was wondering if they could still service this or if I could get this internal battery somewhere and change out myself, also I remember vaguely of having to hold certain button while turning on the HT in order to reset the HT. Any help on solving this would be great. Jamesidea@juno.com

Thanks,

J M B   KS4UU

A simple search on deja.com for "htx-202 er1" would have given you the answer:

From: Clint Bradford (clint.bradford@atdbbs.com)
Subject: RE: HTX202 Er1

View this article only
Newsgroups: rec.radio.amateur.equipment
Date: 1997/02/09

>>My HTX202 reads out "Er1" on the display and is beeping at me. Has
>>anyone had a similar problem? Any fix?

HTX-202 Error Codes (taken from a Radio Shack memo)

ER1 indicates an internal RAM error. It appears when the memory backup battery is dead, when something has caused the memory contents to become corrupt, or as a result of physical or static electric shock. To clear this error, turn off the unit. Then turn it back on while holding down the "function" and "D" buttons. This clears the memory. If the error returns after you clear the memory, service is required.

Hi,

They are listed at -

http://www.mouser.com/catalog/615/217.pdf

and NEC have a data sheet on-line if you do a quick Google.

I should point out that they are really only simple dividers with none of the front-end bits necessary to make a complete prescaler. I was thinking of using one with an old Racal 1991 VHF counter that has the built-in maths capability required to enable a non-decade pre-division.

Cheers - Joe

If you purchase their optional geo-database software, you can load
other locations into the Street Pilot. Note that available memory in
the Street Pilot may be a limiting factor.
Good luck!
nbr

I'd add a prior step: Fully discharge the batteries.

Rob

There is no way to replace the built in map (base map)
You can however load the detailed maps of Europe on the memory card
(did you get one?) to get street level maps and door to door routing,
I hardly ever need the basemap.
You can also do all the SW upgrades that are on the Garmin website,
they are for all versions of the SPIII and concern routing and display
options rather than basemap stuff.

Good luck.

Not easily... the only procedure that could work is reprogramming the
internal memory chip, which would require desoldering it.

The big audio amps need very short pulses of power, and they combine
the large capacitor with the heavy gauge wires mentioned:

> "Keyboard In The Wilderness" <KITW@forest.com> wrote in message
> news:nhL%a.4824$S_.966@fed1read01...
>> John FYI -- from a recommended book:
>> always best to run two heavy gage wires ... directly to the battery

Perhaps a capacitor would be helpful if doing CW rather than any
modulated carrier scheme with its longer power demands, but most
radios seem to have sufficient capacitance if your power wiring
is sufficient to meet their average high demand.

```

I have a SignaLink SL-1 for sale that has only been used to decode, never transmitt. It is in excellent condition and comes with an un-terminated connector (RJ45 on one end, open on the other), jumper wires, the original manual and original box.

Asking $30.00, you ship.

Please contact me off list if interested.

This past year in Dayton rumours were circulating that the Hamvention
might be moved to Columbus, Ohio. Has anyone heard anything more on
this?

===HFpack Events 18 OCT 2003 at Pacificon===
HFpack. The HF Portable Group.
http://www.hfpack.com

HFpack Pedestrian Shootout 2003
HFpack Portable HF Forum
HFpack Snack 'n Drink Session

HFpack Zombie Walk 'n Talk Session

Pacificon 2003 Convention in San Ramon California USA
Friday 17 Oct through Sunday 19 October

HFpackers from all over the world will converge at the annual HFpack events in California. The HFpack Pedestrian Shootout 2003 is different this year, and includes measurements of complete Pedestrian Mobile backpack systems. The new rules will be announced soon. The HFpack Portable HF Forum is a powerpoint presentation and live demo of state-of-the-art portable systems by HFpackers. The HFpack Snack 'n Drink gives everyone a chance to relax and talk together. The HFpack Zombie Walk 'n Talk is a casual evening /PM session with portable gear outside in the beautiful California environment.

See Map and information on HFpack's Website.
http://www.hfpack.com
The HFpack talk-in and intercom frequencies are:
18157.5kHz USB and 144.320 MHz FM Simplex (PL 100)

Saturday 18 October 2003
11:30AM to 2:00PM HFpack Pedestrian Shootout 2003
Location: San Ramon Central Park, Bollinger Canyon Road
Pack a lunch. Bring your best Pedestrian Mobile pack.
Frequencies: 5371.5kHz USB, 14342.5kHz USB.

Saturday 18 October 2003
3:45PM to 4:45PM HFpack Portable HF Forum
Location: San Ramon Marriott, Forum Room "Salon G"
Powerpoint presentation by KQ6XA. Live Demos by HFpackers.

Saturday 18 October 2003
5:30PM HFpack Snack 'n Drink
Location: Pasta Pomodoro restaurant, 146 Sunset Drive,
next to Marriott Hotel
Gather with fellow HFpackers around the patio tables.

Saturday 18 October 2003
8:45PM HFpack Zombie Walk 'n Talk
Location: San Ramon Marriott hotel front lawn.
Frequencies: 5371.5 USB, 7242.5 LSB, 3997.5 LSB

Bruce:
While working the QCWA booth on Hamvention Sunday afternoon I heard
a PA that DARA had signed a two-more-years agreement with the
family that owns the HARA Arena. Consideration has been given to the
Ohio State fairgrounds here in Columbus - but I heard that the two-year
window gained by the Dayton extension was necessary because of the
scheduling of events already on the fairgrounds calendar - I also
heard that Columbus was the 'leading contender' because of the huge
capacity of the fairgrounds (100,000 is a normal day during the fair)
and its proximity to the airport - only 10minutes away. And good
hotel/motel availability would exceed the demands of the hamvention -
But fer a cupla years we will still visit Hara.... NOTE: no official
annnouncement has been made by DARA...just sumthin 2 chew on.

Come on over to the Gainesville Texas hamfest this saturday! Flea market opens for early set-up at 5am saturday morning and general public is in at 7am!
All you radio operators in north Texas and Southern Oklahoma load up all your unused radio gear! There will be indoor tables for $10.00 and outdoor tailgating will be a mere $6.00
The location is the Gainesville civiv center which it located right off of I-35 at the California Street exit on the west side of I-35 directly behind the Taco Bell.
Talk in is on 147.340 or 442.775.
Let's make this a great event! COME ON DOWN!

Hello all,

I'm looking for an ear mic / earbud. I'll be hooking it up to my computer, any interface is ok with me. Main function is going to be playing music. After that, voice reckognition. Very occasionally for realtime conversations.

Theres two pretty much opposite needs i have for this. First, it needs to be able to handle whisper cases. I'd like to be able to take brief notes with this system while in class. Then on the other hand, I do a good bit of biking (the pedal kind) and would like for whatever solution i get to work while biking, both in terms of being able to deal with noise and providing enough volume to hear whats happening.

I'm vaguely considering a bluetooth device. the HBH-60 would be the absolute upper limit for bulkiness I could accept. The nokia looks decent. The Bluespoon digital is just too expensive, but man does it ever look sweet. I'm highly skeptical that i'd get half decent music listening with thse devices. I do not want to have to push a button to talk! I also need something which will stay affixed to my head, doesnt have to endure serious abuse, but should let me rotate my head ariously. Lastly, its just another battery to charge. This last problem i can cope with, but the othersare serious barriers to entry for me.

The BT4000 looks great for noise cancellation. HBH-60 looks like it has good sound quality incoming. Bluespoon looks like the master of recording. Do any bear little enough weaknesses to be worthy of consideration?

If the bluespoon digital could catch whisper's, live up to its expectations for sound filtering, and provide adequate sound, i might actually be willing to make the investment.

Are there any 802.11b products?

The thing is, I'd be just as happy with a "bone-transducer" ear mic; of the wired variety. A VOX unit capable of picking up whispers, ignoring some background noise and providing decent (good would be nice) sound out would be... heavenly. I dont really care about a stinking wire.

Whats the deal with the secret service air tube variety... the ones that have external elements with the coily air tube? What purpose does that serve?

Anyone have suggestions for what to look for. I really need help!
Matt

PS: Very sorry for crossposting. This is a very wide hard to deal wit htopic, and I'm hoping to tap a diverse group for help with it.

Ear buds?

For not a lot of money:

Sony EX-70 ear buds - Bright but clean, Very private with good inherent rejection of outside noises.

>After that, voice recognition.

No experience.

>Very occasionally for realtime conversations.

A completely different problem than your first two items. Usually needs a radically different approach.

> There's two pretty much opposite needs i have for this. First, it

You have zero experience with the current SOTA in voice recognition, right? I think that if you had any real-world experience with the slings and arrows of voice recognition you'd be laughing at yourself right now.

I think its pretty well known that figuratively having your cake and eating it too is impossible.

I am too. I don't really see enough data rate for perfectionist listening.

Rather than trying to solve three of the thorniest audio-related problems of the early part of the 21st century for $1.98, maybe you should get some inexpensive experience with portable listening and see where that takes you.

Amateur Radio Newsline(tm) Report 1358 - August 22 2003

From the 2003 Huntsville Hamfest and from our studios in New Orleans, this is Amateur Radio Newsline report number 1358 with a release date of Friday, August 22 2003 to follow in 5-4-3-2-1.

The following is a Q-S-T. I'm Don Wilbanks, AE5DW, reporting.

We begin this weeks newscast with the sad news that one of the voices so well known to ham radio will be heard no more. This, with word that Amateur Radio Newsline's Vice President and senior anchor Roy Neal, K6DUE, has passed away.

Roy was 82 when he died on Friday, August 15th at a hospital in High Point North Carolina. He had undergone heart valve replacement surgery three days earlier. According to his family, Roy was at peace at the end and did not suffer.

In both the worlds of broadcasting and of Amateur Radio, Roy Neal was a legend. He began his career at WIBG radio in Philadelphia. After military service in World War Two, he returned and helped pioneer the emerging medium called television at station WPTZ. He then joined the National Broadcasting Company where he spent most of his career producing and reporting for Network News. His specialty was science and aerospace.

But to hams, Roy will always be remembered as the person who brought manned Amateur Radio into space through the SAREX and ARISS programs. His close friend and NBC colleague Alan Kaul, W6RCL, joins us later in the newscast with more on Roy's many contributions. (ARNewsline, Philadelphia Broadcast Pioneers)

**

IN THE NEWS: JIM HAYNIE ON BPL

Roys Death came just as the Huntsville Alabama Hamfest was getting underway. One of the major topics hams were talking about is he growing debate over B-P-L or Broadband Over Powerlines. One of the people most concerned is ARRL President Jim Haynie, W5JBP:

--

Jim Haynie, W5JBP: "Broadband Over Powerlines is important, and just as I said on our website - this is bad. This is not good for Amateur Radio and I don't know how we are going to lick it. Quite frankly, and I want to tell you that right now."

--

Haynie made his comments to a packed audience at the hamfest's ARRL Forum. He says the League is doing everything possible to try to convince the FCC to not proceed with rule making B-P-L a reality. (ARNewsline)

**

RESTRUCTURING: HAM RADIO AFTER MORSE CODE

Jim Haynie also shares his thoughts on a subject dear to many hams: Whether Amateur Radio should or should not keep Morse code. Stressing that he speaks for himself and not the League, Haynie says code should be a requirement for the Extra Class license:

--

Jim Haynie, W5JBP: "What if we were to have three classes of licenses? Entry, General and Extra and Entry got phone privileges on he current Novice bands? And that's all.

So we ask questions on the exam about just that. They could only use 100 watts store bought radio equipment. Possibly even a two-year expiration date.

Generals - same thing except no new expiration date. The same privileges they have today. But for Extra we retain the 5 words per minute code requirement."

--

Not everyone agrees with Haynie. Scotty Neustadter, W4WW, is Chairman of the Question Pool Committee for the National Conference of Volunteer Examiners and this is his personal view:

--

Scott Neustadter, W4WW: " This is not your fathers or your grandfathers ham radio. Things have changed. Technology has changed, and I think that - to an extent - that we have to change with them. We have to recognize our history and in no way am I - nor do I know of anyone else ho is advocating any abolition of the right to operate CW on any Amateur band where you can operate it today.

What I do know is that there is a whole lot of people saying that it does not make allot of sense anymore that I require that you be able to do that. I think that's the distinction that we have to keep in mind.

--

While the debate over Morse Code in amateur radio's future goes on _ Jim Haynie points out that what will be decided remains a long way off_perhaps years. (ARNewsline)

**

HAM RADIO HONORS: W6JAY RECEIVES 2003 YHOTY AWARD

As enthusiastic hams began pouring into Huntsville's Von Braun Civic Center Saturday morning _ one of the Hamfest's biggest moments was taking shape. The Huntsville Hamfest is the setting for an exciting yearly event_and that's the presentation of the annual Amateur Radio Newsline Young Ham Of The Year Award. This year's winner is 17-year-old Jay Thompson, W6JAY, of Santa Ana, California:

--

Jay Thompson, W6JAY: "When I first started I did not think that thre was allot to do in Amateur Radio, but the longer I am a part of it , I

realized that there is much more that I could do. And I know that as much as I have done so far, I know that there is still kore out there for me. So I'll keep trying to acomplish more and maybe Ill become even better at Amateur Radio in the future."
--

CQ Magazine is one of the award's principal underwriters. Editor Rich Moseson, W2VU, says that_while Jay stood above fellow nominees_many other young hams are big achievers, as well:

--

Rich Moseson, W2VU: "Every year we review applications and nominations from a variety of people. The person you see standing here on the stage is not the only really good kid who has done allot. He's just risen the crop a little bit. There are a whole lot of other young people out there in ham radio doing great things, and we congratulate all of them."

--

The Amateur Radio Newsline Young Ham Of The Year Award is in its 17th year. Vertex Standard and CQ Magazine are the Award's principal corporate underwriters.

That's it from the 23003 Huntsville Hamfest. The rest of the newscast will come from our New Orleans studio, but first this. (ARNewsline)

**

Break 1

From the United States of America, we are the Amateur Radio Newsline, heard on bulletin stations around the world including the 145.600 MHz repeater of the Hiway Amateur Radio Club serving Durban South Africa.

(5 sec pause here)

**

RESCUE RADIO: THE BLACKOUT

Ham radio came to the rescue as cellphone systems totaly failed during the recent North-East blackout. Bill Pasternak, WA6ITF, has more:

--

A New York Times article said it this way: When technology failed on a massive scale, some old-fashioned broadcasting stepped into the breach. This, as ham radio operators took to the airwaves to reach emergency workers.

The technology that failed was the North-East power grid that provides electricity to cities like Cleveland, Detroit and New York. This in turn lead to communications failures as numerous cellular telephone sites without generators or battery back-up - went away -- the afternoon of August 14th .

According to an ARRL Bulletin, with cellular systems overloaded or out altogether, the incident turned into a test of Amateur Radio's capabilities to operate without commercial power. The New York City-Long Island Section Emergency Coordinator is Tom Carrubba, KA2D. He estimates that ham radio operators handled 800 to 1,000 messages from Thursday afternoon until early Friday.

Diane Ortiz, K2DO, is the ARRL Public Information Coordinator for the area. She took to the air when power went down in her Suffolk County community. Ortiz called up an informal VHF net. Over the next 20 hours hams passed about 500 pieces of traffic. In addition to handling messages for people stranded in the city, amateurs also relayed other useful information. This included such items as which stores or gas stations were open.

In the Big Apple itself, ARES teams provided communication support for Red Cross Emergency Response Vehicles set up at transportation centers in Manhattan. ARES members also accompanied Emergency Response Vehicles to fire calls. RACES was activated in the greater New York City area after a state of emergency was declared.

Across the Hudson River in New Jersey, a net linked the Red Cross lead chapter N2ARC in Princeton with other chapters. Further to the West, Michigan ARES teams assisted emergency operations centers and the Red Cross.

In Ohio, Section Emergency Coordinator Larry Rain, WD8IHP, reports that all ARES organizations in the Northern tier of the stated were activated.

For millions of people in the Northeast and Midwest, the August 14th power outage took away access to wireless voice, e-mail and the Internet. The failure of the cellular system was especially evident. Nextel Communications spokesman Chris Grandis said that the company needs electricity to power its cell sites, but when you don't have that, it's out of his company's control.

The same held true for virtually every other wireless provider, few of which bother to have emergency power at cellular and wireless Internet sites.

For the Amateur Radio Newsline, I'm Bill Pasternak, WA6ITF.

--

The bottom line: The traditional forms of communications failed, but hams were there to lend a hand. (ARRL, NY Times, others)

**

RADIO LAW: FCC DECLINES TO RECONSIDER ITS HUMAN EXPOSURE TO RF RULES

The FCC has declined to open an Inquiry into updating its human exposure to RF signals rules. In particular, the petitioner in this case wanted the Commission to consider possible health hazards not covered by the current rules, including non-thermal effects and the effects of long-term low-level RF exposure.

According to the CGC Communicator the FCC dismissed the petition, arguing that any such evidence should be presented to other, more appropriate expert agencies. The Commission also noted that its current human exposure rules have recently been upheld by the Second Circuit Court of Appeals. This, in the face of similar arguments by other petitioners. The complete story is in cybrspace at http://hraunfoss.fcc.gov/edocs_public/attachmatch/FCC-03-191A1.doc (CGC)

**

WRC'03 FALLOUT: GERMANY GOES CODE FREE

It's another week and another country has joined the no-code revolution. Following Switzerland, the U-K, and Belgium, Germany is the latest country to announce that it is abandoning the Morse code test as a requirement for HF band operation.

According to the website of the German national amateur radio society, the DARC, from the 15th of August radio amateurs in Germany with a CEPT Class 2 license are allowed to use the High Frequency bands using their existing callsigns. Further details were to follow, the website said. (GB2RS)

**

RESCUE RADIO: OREGON HAM RECEIVES HONOR FOR GOING THE EXTRA MILE

Back on this side of the Atlantic, an Oregon ambulance dispatch coordinator, EMT and amateur radio operator has been named a recipient of a "Star of Life" award. This, from the American Ambulance Association.

Scott Waggoner, KC7DHJ, of Clackamas County was nominated for the honor by his co-workers in recognition of the many extra tasks he has undertaken at AMR's headquarters in Portland.   Among other things, KC7DHJ was cited for his help in setting up portable repeaters during search and rescue operations, his treatment of minor injuries suffered by firefighters and his overtime work on an American Medical Response ambulance. (CGC from OregonLive.com)

**

ENFORCEMENT: UNCOORDINATED REPEATERS TAKEN OFF THE AIR

It took three letters and allot of patience on the part of the FCC but a repeater interference problem in Stockton California has been solved. This, as Thomas G. De Lasaux, WA6SEK, removes his repeater from the air.

The matter goes back to September 9, 2002, when the FCC notified De Lasaux that his operation of uncoordinated repeaters on 224.660 and 441.275 MHz was causing interference to coordinated repeaters on the same frequencies in his are. By letter dated May 5, 2003, the FCC informed De Lasaux that the information he submitted in regard to the initial inquirey did not demonstrate coordination for either of the repeaters. Also, that until he was able to demonstrate current coordination, the primary responsibility to prevent interference.

At that time the FCC requested De Lasaux inform the agency within 20 days what steps you were taking to resolve the interference issues. On July 1, 2003, the FCC notified WA6SEK that we had not received a response to the May 5th letter, and enclosed an additional complaint. The July 1 letter afforded De Lasaux an additional 20 days to respond, and stated that if the matter were not resolved by July 25, we would initiate enforcement action against his license.

On July 22nd, De Lasaux notified the Commission that your repeaters operating on 224.660 MHz and 441.275 MHz had been shut down and would remain so. The FCC has now terminated all further action in this matter. (FCC)

**

ENFORCEMENT: FCC AFFIRMS $10,000 FINE AGAINST NY PIRATE

The FCC has affirmed a $10,000 fine issued on July 23rd of 2002. This, against the Reverand Yvon Louis in a case the case involves an aleged series of unauthorized FM broadcasts made from Louis' Calvary Tabernacle in Brooklyn, New York.

The FCC says that over the course of several months in 2001, Reverend Louis reportedly transmitted on 93.7 MHz, then switched to 88.1 MHz after getting caught. But it was not over yet. He then used 90.1 MHz after getting caught again, then reverted to 88.1 MHz in open defiance of the FCC order to stay off the air.   (FCC, CGC)

**

RADIO HAPPENINGS PAROCHIAL SCHOOLS TO REMOVE CELLULAR ANTENNAS

Bowing to health concerns from parents, sixteen schools operated by the Catholic Diocese of Brooklyn will eliminate cellular antennas mounted atop buildings and church facilities. The on-line edition of the New York Post reports that one parish stands to lose $18,000 a year in rent money used to offset the school's operating costs as a result of the change. (CGC)

**

COMMUNICATIONS FOR THE HANDICAPPED: BLIND STUDENTS LEARN TO NAVIGATE USING NEW GPS TOOL

A group of blind high school students visiting Catholic University in Washington D.C. recently shouldered specially equipped laptop computers. This, as they navigated about the campus and visited a pizza restaurant led by voice commands and the Global Positioning System.

A $1,000 Global Positioning System add-on to the BrailleNote keypad showed the students that getting around a college campus is suddenly much easier than it used to be. The complete story is on line at www.washtimes.com/business/20030729-093916-2006r.htm (CGC)

**

WITH THE HANDI HAMS: SUMMER CAMP ON THE AIR

Handi Ham station W0EQO, will be on the air during the summer Minnesota Radio Camp from August 23rd through August 30th. You can look for W0EQO on several different bands using CW, single sideband, FM, and digital modes. Also listen in cyberspace for an EchoLink net on Monday evening at 2400 hours GMT. The HandiHams will respond to all QSL requests for all contacts, including EchoLink contacts. (HandiHams)

**

BREAK 2

This is ham radio news for today's radio amateur. From the United States of America, We are the Amateur Radio Newsline with links to the world from our only official website at www.arnewsline.org and being relayed by the volunteer services of the following radio amateur:

(5 sec pause here)

**

INTERNATIONAL - HOLLAND: NEW PREFIXES FOR THE NETHERLANDS

A New call sign prefix went into effect in the Netherlands on August 7th. On the High Frequency bands, the PA, PB, PC, PF, PG and PI prefix callsigns will now be be heard with one, two or three letter suffixes. On VHF and above, the PD, PE and PH are the prefixes, again with one, two or three letter suffixes. For example, the former PBZ0AIU, who sent in this news story, is now PC2A. (PC2A via GB2RS)

**

DX

In D-X, word that GM0GNY, is active as 4K0GNY from an oil drilling and production platform in Azerbaijan. He will be there starting the 20th of August for around a month. Look for him on daily on 40, 20, and 17 meters and QSL as directed on the air. (OPDX)

**

THAT FINAL ITEM: A FINAL 73 TO K6DUE

At the beginning of our newscast, we told you about the passing of a member of the Amateur Radio Newsline family. Roy Neal, K6DUE, died August 15th following heart surgery. One of the people who knew Roy best is Alan Kaul, W6RCL. Roy and Alan worked together at NBC News, and on projects benefitting amateur radio. Alan looks at the life of a man who was an institution in American broadcast journalis, as well as a driving force in amateur radio's conquest of space:

--

When Roy Neal, K6DUE, died last week, he was possibly the best-known ham in America. He left an indelible imprint on Amateur Radio.

Roy, more than anyone else, was responsible for getting ham radio aboard manned space craft and each new mission is testament to his legacy. His efforts earned Roy awards from the Dayton Hamvention, they designated him Ham of the Year and from CQ-Magazine, which this year named Roy to the Amateur Radio Hall of Fame. He also received honors from The American Radio Relay League, and other groups and served as chairman of two key AMSAT committees.

Roy was a good guy. He was my friend and colleague at NBC News.

I met Roy in the 1960's when I was working in Seattle and he came to town to report on aerospace giant Boeing. After I moved to Los Angeles and joined NBC News in the 70's, Roy and I collaborated on a lot of news reports.

As a correspondent Roy was best known for his coverage of the U-S Space program _ he was a friend of the original astronauts _ and often reported from both the launch site at Cape Canaverral and NASA Mission Control in Houston.

Not many people know this but Roy was also the author of a book about America's missile system_. called The Ace In The Hole. It was written at the height of the Cold War.

In the 1970's, Roy teamed with television producer Dave Bell, W6AQ, to launch the first of several documentaries about amateur radio. Number One was a 16-minute film, Moving Up to Amateur Radio. Followed a few years later by The World of Amateur Radio. Dave Bell remembers Roy as the ultimate professional:

--

Dave Bell W6AQ: "Of all the on-camera talent that I have known, Roy was the most assured and had the smallest ego of all of them.

He was a true professional when it came to the news. Everything was always true. Everything was straight from the shoulder and there was no compromise.

Roy was one of the old-school news guy. He grew up in the television business and he understood it better than anybody who is working in it today."

--

In the 1980's Roy helped convince NASA to put ham radio in Space aboard a manned flight of the Shuttle. That first ham-astronaut was Owen Garriott, W5LFL, on board STS-9. Garriott's story of the 1st DX-pedition in Orbit was told by Roy in the television documentary Amateur Radio's Newest Frontier.

--

Audio from ARNF: "This is the story of an expedition. The story of STS-9. The Columbia. And these are the explorers: John Young - the commander. Brewster Shaw the shuttle pilot. And the scientists Dr. Ulf Merbold, Byron Lichtenberg, Robert Parker and Dr. Owen Garriott -- an Astronaut who is also Amateur Radio operator W5LFL. This is an expedition to probe the outer limits of science and Amateur Radio's newest frontier.

--

Roy's next project was called SAREX - Shuttle Amateur Radio EX-periment, followed by the New World of Amateur Radio which profiled a new ham, teen-ager Kelly Howard, N6PNY. She's now all grown up, married and has kids of her own. She fondly remembers working with Roy Neal.

--

Kelly Lenhert (ne Howard) N6PNY: It was all so exciting, but it was also overwhelming. But working with Roy made me feel so comfortable. He made me feel competent in what I could do. He took me under his wing and he was really supportive and he got me to do what I needed to do to make the film and bring out the best in me."

--

Roy's last documentary was called Ham Radio in Space. Roy's interest was a natural fit with AMSAT. Roy's close friend AMSAT Vice President Frank Bauer, KA3HDO, thinks of K6DUE as his mentor.

--
Frank Bauer KA3HDO: "One of the things that Roy taught me was how to distill information into basically sound bites, if you will. I remember one time where we had to give a presentation - at Dayton - and we had 20 minutes. I told him that I did no know how he could so that, and he said: `Frank, if I can do the whole world on the news in 30 seconds, you can do this in 20 minutes.' So Roy taught me a whole lot from an executive perspective because he was a true executive."
--

Another AMSAT officer who worked closely with Roy is Robin Haighton, VE3FRH, the President of AMSAT North America.

--

Robin Haighton VE3FRH: "The space program itself is in good hands, but there is no doubt about it that we will miss that leveling confidence that Roy always brought to the meetings and the discussions. He made friends with everybody. The moment you met him you felt that here was a man you could trust."

--

Other comments have come in from all over the world From New Zealand, the past president of NZART, Jim Meechen ZL2BHF sent his condolences. As have numerous other Newsline listeners. Another of Roy's friends, Bob Heil, K9EID, had this to say.

--

Bob Heil K9EID: "I'm going to miss his spirit. He had a spirit about him that when you heard him on the air, you stopped tuning. This was something special you were listening to. And it wasn't always the tone of his great broadcast voice. It was his spirit. He was always in an up-mode about this hobby."

--

Roy was in the first generation of television newsmen who began their craft after World War Two. He started in Philadelphia and then moved to the West Coast where he helped found the NBC News bureau in Los Angeles. That was during the days of the old John Cameron Swayzee Camel News Caravan.

Roy was at ease in front of a microphone _ and could talk to millions of television viewers as easily as he could talk to the ham across town. On camera, he had the uncanny ability to read to time, precisely to time. When I produced updates for NBC Nightly News and Roy was the on-camera talent, I would time the newscast and tell Roy how long he would have to report the story.

I'd say something like this: "Roy, can you do it in 19 seconds?"

And Roy would always reply, "You know I can old buddy."

Roy liked that phrase "old buddy." He used the phrase to address friends and co-workers for some time. As for the updates - Roy always got them right. He would stop talking just an instant before we'd have to switch back to the network.

By the time he retired in 1986, Roy had worked out of the Los Angeles news bureau for almost 35-years. He'd probably written millions of words, and brought his audience uncountable hours of news and information.

But even in retirement, Roy Neal didn't stop doing what he did best. He was no stranger to listeners of Amateur Radio Newsline who knew him as a tireless volunteer giving freely of his own time to report the latest information -- always signing off in his own stylized way.

--

"This is Roy Neal, K6DUE. Thanks for listening and 73."

--

73, Old Buddy _ I really hate to see you go.

I'm Alan Kaul, W6RCL, reporting for Amateur Radio Newsline.

--

Roy leaves his wife Pat, and sons Mark and David. Services were held August 19th at the Wesley Memorial United Methodist Church in High Point, North Carolina.

In lieu of flowers the family requests that donations in Roy's mame be made to the Astronaut Scholarship Foundation at the Astronaut Hall of Fame. The mailing address is 6225 Vectorspace Blvd, Titusville, Florida, 32780. Please mark your envelope to the attention of Linn Le Blanc.

And this final thought. Yes, we at Newsline have lost a very dear friend. More important -- so has all of Amateur Radio.

73, Roy. None of us will ever forget you. (ARNewsline, W6RCL)

> rejection of outside noises.

I have some excellent sennheiser's i swear by. Why i cant remember
their model number, i do not know. *shrug*. I was trying to indicate
that whatever solution i get should be capable of playing sound as well
as recieving.

> >After that, voice recognition.

> No experience.

> >Very occasionally for realtime conversations.

> A completely different problem than your first two items. Usually needs a
> radically different approach.

By virtue of it being VOX, as opposed to approaches which can be PTT?
Thats the only difference i can think of, from my admitantly naive
understanding. Good sound out should be good sound out, quality voice
recogition should parallel- to some extent- voice capture.

> > There's two pretty much opposite needs i have for this. First, it

> I think that if you had any real-world experience with the slings and arrows
> of voice recognition you'd be laughing at yourself right now.

I'm so naive i dont even know what SOTA is!

But yes, whisper case of text transcription is a bit excessive. I'm not
entirely sure why i listed it, must've been the time of night. Voice
reckognition of text is going to be least use. Any whisper cases I'll
have I'll simply need to record such that I can at least tell whats
being said. 99% of voice rec will be a 10 - 40 word dictionary of
commands. Based on my experience last year working on a StrongARM based
PDA with horrible sound input, the worst imaginable mic, and a two bit
voice rec. program, I really cant imagine I'm demanding that much.

I'm going to be using a full blown computer for voice reckognition,
allowing some liberties in post processing and the benefit of top of the
line software.

The signal to noise ratio should remain tolerable (remarkably close) in
both accounts. This problem has been solved by many units, so I'm
heard. The problem is dynamic range. Which is classically far less of
a problem.

I think a lot of these problems are solved with a decent bone induction
ear mic. I have no information but what dribbel I can dig up on the
internet about these devices unfortuantely, no real experience. The
main question seems to be how adequate their vox operation is, and what
sound quality they give for the user.

Laptop and various sound input peripherials are en-route, and being
ordered. As someone who cant move ten feet without my music though, I'd
like to say I have some small grounds for experience. But hopefully
this will give me a lot more.

I am willing to spend $350 or so, IF the solution meets my needs. It
better be damned good for $350.

Matt

Hi:

I have a weeks worth of experience with an all in the ear microphone on a bike ride across the state of confus.... err Iowa. It was my experience that if there was any wind entering my mouth while the radio was transmitting that the wind noise would appear in the transmitted audio. At times the wind noise would totally obliterate the voice sounds that were the intended transmission.

From several years of experience on a bicycle the best that I found was a boom microphone with a little bit of foam around the microphone element and an earbud for the received audio.

I even tried a throat microphone and if it is not placed exactly in the correct spot the audio becomes totally garbled. And it pushes on the throat when one is possibly breathing hard.

The most comfortable by far though was a speaker microphone clipped to my shoulder so that I could hear the radio and grab the microphone easily when I needed to. Only problem there is if the microphone is dropped and it and the cable get into a wheel something bad is going to happen.

Good luck on your search for a way to do what you want to do.

Hi all I am after some parts for the Icom M-800 HF Marine Radio

I need a remote controller unit with all the leads and I need another set of connector leads and a mic Oh and the proper DC Leads :0)

does any one out there have any of these parts or any contacts for these parts ????

I have two Radio bodies and one controller but no connector leads or mics ..

The controller part number is EX-803 Remote Controller
DC Power cable for Controller 12v-1 amp OPC-089A
Interface Cable for Controller OPC-172A

Main Unit Power Cable 12v-30 amps OPC-077

Also is there a mod available to get general coverage TX ???

Please feel free to reply to my email.

maleaton@bigpond.net.au

My Kindest Regards to the Group.

First of all, forgive my cross posting. I was not sure where would be best.

I am a new ham. I have been looking around for some mobile 2m radios to put in my car. Some of them I see are capable of 50w 65w or 75w transmit power. Would I need to do any kind of MPE calculations for radios that transmit above 50watts for mobile radios? Considering that an antenna mounted on the top of the car and that exposure would be only momentary to anyone I drive by.

Hi...I've been looking around for one of the older Swan Transcevers...It
is The Model 250C
6 Meter Unit, with if possible the Matching AC Supply...I'm not looking
for a basket case, however. the radio does not have to be Mint either !
 Also the price has to be reasonable...or else I might as well go out
and but one of these new Icom mobile radios with multi-mode VHF-UHF-6
meters-and HF to boot !!...for some $ 725.00
Anyway if someone out there has one of these radios ...please drop me a
line and we can go from there...OK

Thanks a Lot
Carl

I am trying to build, or at least cobble together, a battery pack for a receiver. I will only need one (1) amp of power. The battery will have a one (1) amp fuse on both the lead in and out of the radio just for safety. What I have not been able to understand is what amp hours are. I need a twelve (12) volt battery that will last a while, or at least five hours, and be rechargeable. I have been looking at UPS battery pack, or even small car batteries. Any help? Thanks.

Matthew

Not a valid statement. The amp (ampere) is a unit of current, not power.
The watt is a unit of power. Power is equal to current times voltage.

While delivering one ampere? Then a 5 ampere-hour battery would just barely make it.

I'm wondering if anyone can help me track down a problem with a SW radio I just bought at a garage sale? It's a Panasonic RF-B300 (portable), and when I tested it at the garage sale all bands worked fine. But after I brought it home the MW band would just barely pick up my local station and nothing else (HF and FM still worked fine). I took the back off to check for loose wires on the ferrite antenna, but everything looked OK. In fact, everything inside looked really solidly built on this radio. I put it back together, and when I turned it on the MW band

was working loud and clear, picking up stations from all over. I
turned it off, but half an hour later the MW was dead again (except for
our local station). I hadn't moved it or bumped it in the time between
when it was working and when it wasn't.

Does anyone have any ideas of what could be wrong? Like I said, the HF
and FM bands work fine, and the MW band can barely pick up my local
station (but nothing else). Here's a link to some info on this receiver:

http://www.dxing.com/rx/rfb300.htm

Thanks,
Dave.

Hi:

If your radio truly draws one Amp of current while operating then to operate for one hour in the ideal world a one Amp/hour battery would be needed. Now, with the knowledge that this is not an ideal world, it will likely take about a 1.2 amp/hour battery to operate your radio for an hour.

To operate the radio that you describe for five hours may take a battery of about six amp/hour capacity.

Most batteries are rated at a twenty hour discharge rate. If the current is drawn from them at a higher rate then one will not get as much power out of them as one would at the slower discharge rate.

By a twenty hour rate I mean a one amp/hour battery will put out .05 amps for twenty hours before the voltage per cell is at a level where it is declared discharged.

The voltage that is declared to be discharged also depends on the type of battery construction one has. Nickel Cadmium has a voltage per cell that I believe is rated as discharged when it reaches 1.0 volt. Gelled electrolyte and other lead acid types of batteries use a different voltage per cell. And the NiMH batteries, although close to NiCD are slightly different.

Simple answer to your question looks like a twelve volt gell cell of about six amp/hour rating to operate your radio for five hours.

Well, just a follow up on this. I gave in and went to the local car stereo installer and had them do the job. While I was at it, I had them install a small (3") 12V fan for some extra air flow. I wanted to install the rig in an enclosed area in the console that was just wide enough for the rig, about 10" deep and about 8" high. This "pocket" was all plastic - including the back - however there was nothing behind the pocket under the dash. The installer cut a small hole for the fan and tied it so that if the car is on, so is the fan. It's pretty quiet most of the time as well.

Anyhow, the fan moves about 22cf/m of air into this pocket and out the front right across the heat sink of the radio (the entire bottom of the rig on the Yaesu 8800). It keeps the rig nice and cool even in pretty heavy duty cycles at 20W or so. I haven't run the rig "wide open" for any length of time yet, but I'm willing to bet the rig would still stay pretty cool.

Thanks for all the input. I'm much happier not having wires running around the cabin into the cigar lighter. Now that everything is wired, I have the lighter adapter to use in my wife's car when needed for those short trips.

Anyone know the approximate HV
level on a 220 loaded upto 400 ma on SSB?
SSB voltage level is ~2250 volts. Is this an excessive drop?
This is almost the same as the CW voltage level.
The manual states the level is 2100 volts loaded on CW.
I'm sure there is a normal level. Perhaps not.

How long will the feed line be?

I prefer the coax for the shorter runs. Actually I'm using about 250
feet of RG-6 with an antenna mounted pre amp with excellent results.
The TV antenna is about 40 feet below my 2-meter array and full power
does not normally bother it although antenna orientation does seem
important.

Technically yes. There is a site that will do this for you. I have
lost the link, however a search should find it.

I should show that you are within limits. (A 5 watt HT held next to
your head is worse then a 50 watt transmitter 8 feet away.)

Dan

I recommend cleaning the bandswitch (the switch with which you select HF/MW/FM). Spray contact cleaner on it (on the "works" of it, inside the cabinet)and operate the switch a bunch of times.

I got my present can of contact cleaner at Radio Shack (RS # 64-4315). The downside is that's around nine bucks for a little can-- kind of pricey if you only need one spritz. Ask around among your technical acquaintances if anybody'll give you a spritz.

Or just try operating the switch a bunch of times without the contact cleaner-- a contact may have oxidized from age, and operating the switch does a kind of wiping action that may clean it.

Is it considered bad form to send a QSL card larger than the 3.5x5.5
standard post card size? I haven't been able to find any inkjet postcard
stock in anything but a 4.25 x 5.5 and I've wanted to print my own.
Tnx

For what it worth from the ARRL:

A review of the cards received by the ARRL Outgoing QSL Service indicates that most fall in the following range:

Height = 2-3/4 to 4-1/4 in. (70 to 110 mm) Width = 4-3/4 to 6-1/4 in. (120 to 160 mm)

The IARU Region 2 has suggested the following dimensions as optimum:

Height 3-1/2 inches [90 mm]   Width 5-1/2 inches [140 mm]

Well if they send you an SASE the larger size may not fit. Basically when they've sent the envelope and postage, it's not only a sign that they want your card but it like it unmarked by the postal service (and unmangled).

What I do is set up my layout in Word so that it is 3.5 x 11.5 and cut the stock to that size after printing.

Thanks for the help Gerry. I tried the "operate the bandswitch a bunch of times" method when I first got the radio, but it didn't seem to help.
   I inadvertantly discovered that turning on the dial light will almost always bring the MW band back, but after the radio is shut off for 30 minutes or so, it's gone again. I've been getting some help from people at rec.radio.shortwave, and one guy thinks that turning on the dial light may be bumping the voltage of a circuit with a defective transistor, making it work temporarily. I plan on going over all the solder connections just to make sure it's not a bad joint, but other than that I'm afraid it's beyond my ability to diagnose. There is a local radio repair shop I can try, so maybe they can help if it's not too expensive.

Thanks again, and I'm open to any more thoughts.
Dave.

> I recommend cleaning the bandswitch (the switch with which you select HF/MW/FM). Spray contact cleaner on it (on the "works" of it, inside the cabinet)and operate the switch a bunch of times.
>
> I got my present can of contact cleaner at Radio Shack (RS # 64-4315). The downside is that's around nine bucks for a little can-- kind of pricey if you only need one spritz. Ask around among your technical acquaintances if anybody'll give you a spritz.
>
> Or just try operating the switch a bunch of times without the contact cleaner-- a contact may have oxidized from age, and operating the switch does a kind of wiping action that may clean it.

I would send you to www.symantec.com which has tools for removing the viruses roaming now that infect your machine without being opened in email attachments and links to the real patches put out by Microsoft.

I find it difficult to believe that anyone in this day and age would open any attachment that comes through email without knowing who it is from and exactly what it is but it seems folks are still doing that. There are two emails right now that are cleverly done. One looks to be a returned message from your server or Microsoft that you sent out. IT ISN'T!.   The other claims to be and looks like a patch from Microsoft. Microsoft NEVER NEVER NEVER sends out patches.

If you don't know, you can right click on messages and look at their properties. That is one way you can see if an attachment is not legit but you have to know enough to recognize it.

> hours.

>

The best thing to do when sizing the capacity of your battery is to obtain a set of discharge curves from the batteries manufacturer. When a battery says it has a 6 amp/hour rating that means they discharged the battery at 6 amps and it took an hour for the battery to drop to the minimum voltage. 6 amp/hour rating does not mean that discharging it at 1 amp will take 6 hours. Nor does it mean that discharging it at 12 amps will take 30 minutes. Neither of these is the case, that's why it's best to have discharge curves.

Also be mindful of the type of battery you choose. For example a car battery is not designed to draw low amperage. Drawing low amperage and then charging again will dramatically shorten the life of the battery. If you continuously do this. Be sure you find a battery that is suited for your application

look inside an old computer switching power supply, they typically have two
such beasts
at 200mfd to 470 mfd depending on what was on hand at the moment.

A Phone patch will give you an 8 ohm input and a (usually) 600 ohm output on
```

the "radio" side, and a telephone connection, usually level protected on the other side.

A Hybrid phone patch, (which is what most but not all amatuer phone patches are) will let you tranmit and recieve to the phone line at the same time. It provides a Null adjustment to cancel your signal back to you.

There will be a level meter on the front, as well as gain controls so you don't over drive the phone line. When you set the service switch on the rear, the meter is used to adjust the null.

Due to an old requirement to keep a record of phone patches made, many of the units have an output connection to go to a tape recorder.

You can find them on Ebay for under $50. The units for older radios will have a different impeadence for the microphone side.

Apologies to Steve, Mark, Michelle, and the gang at rec.crafts.metalworking and rec.woodworking---you folks are definitely *NOT* trolls.

With that out of the way, let the word go forth that Guy Richards has found other NGs besides this troll-infested morass named Google. If you guys from metalworking & woodworking are smart, you'll jump ship too.

Twisty, behave yourself during your stay in the Crossbar Hotel... and no more jamming the airwaves when they parole you!

Aaron, cheer up... maybe one of these days, Uncle Sam will give you a real badge and make you a real G-man! But you absolutely must stop sending out those bogus communications-violation notices if you want that badge... Uncle Sam gets a wee bit upset when you do that.

Hagrinas... dude, you should stop holding back and write that book of yours. Don't be stingy, share some of that knowledge with the rest of us! You might even have a shot at a Nobel!

Laura... ah, you never learn. That's because you CAN'T learn! Now of course, you're going to put up a whole shitload of replies to all those hacker NGs you belong to, but the joke's on you, sister... because **I'll never read 'em**, hahahahaha!!! You want attention, but I'm not going to give it to you (and neither does anyone else, judging from all the no-reply messages you posted on that virus NG). Damn shame, you could get a job someday if you'd ditch your shitty attitude... but hey, it's not my fault your kitty died.

Last (and certainly least), to Ed... you could have really hit it big with that car-restoration biz of yours. But alas, you thought the booze tasted so good... one tequila, two tequila, three tequila, floor. *hic*

Now watch, you dumbass trolls are going to reply to this post, because you think I'm going to come back and read it. Post reply, slave. Hit send button, slave. I won, slave. Go ahead, waste all the bandwidth you want... it is all in vain. ALL IN VAIN, trolls.

If you have something to tell me that's so damn important, you can e-mail me directly with your usual unoriginal drivel. I just toss all that crap straight into the delete file anyway. Shot wasted... you lose.

Now, GOOD RIDDANCE, trolls!!! Hahahahahaaaaa!!!!!

Guy Richards

I am building my own.  Was hoping to learn a tried and tested circuit.

I got the receive and opto isolator working.  Am trying to find the
right xmit attenuation now.

Steve,

Thanks for your explanation... But I think it really made me figure out the real question I want to know:

- I know the definition of ground plane you gave below. My question is: When I don't have a "large conducting plane or flat surface", what (or where) is my reference???

- I understood the explanation of differential and common mode signals too... But, when you study electromagnetic compatibility (EMC), you learn that both kinds of signals are present in your feeding cable (that come from mains, let's us suppose...). Why the common mode signal is there, if it should not be there (theoretically)??? What is the "cause" (thinking in terms of cause and effect) of this kind of sinal propagating in the lines?????

Now, I think we're getting closer to the answers...

Best Regards,

Muriel

Subject: Amateur Radio "outside the box"
Message-ID: <20030727093735.14537.00000832@mb-m04.aol.com>
Xref: archiver1.google.com rec.radio.amateur:5635

Amateur radio "outside the box"

Although there are many possible amateur-radio activities, Hams tend to focus on a certain group of activities. Often, they are followed in the manner accepted by tradition.

The typical Ham activity is making short QSOs for contests and awards. Contests are events where Hams try to make as many contacts on specified bands as possible. Awards are often given by how many locations are contacted ("worked"). For example, there are Worked All States, Worked 100 countries, etc. Notice that traditional Ham radio awards are given for the number of contacts or for how many contacts in a given time period.

This is a competitive activity. Hams compete to obtain the best contest score, or to obtain award certificates. Hams seem to have this type of mode of operation, and it seems to be the same at almost every club. I have nothing against competition. Also, I have nothing against Hams doing what they enjoy doing. But, I would like to point out that there are other types of competition possible. And there are other types of activities and interests.

Because no such clubs exist right now that cater to these interests, there is no avenue for one to pursue these interests. Things like expense and the large amount of time it takes for an individual (vs a group who share an interest), tend to not allow these new interests to surface. Also, the current group of Hams wants to do things their way and have little acceptance for different types of activities. By not providing an avenue for others to pursue their interests, these other Amateur-radio activities do not get done. Some people would become frustrated when they go to clubs and no one shares their interests. This has the effect of reducing the number of people that stay in the hobby.

Here are some other possibilities in amateur radio.

More radio direction finding challenges.

The gaming aspect of this activity is appealing to some. Also, it uses more physical activity than sitting at a station making contacts.

Homebrewing challenges.

Lets have some homebrewing challenges. How about building small circuits, e.g. using SMT? I don't see small batteries at Hamfests, so I know this isn't being done. How about ATV using a homebrewed project?

Often Hams will not show interest in a project, just because it doesn't hook up to their radio. Just because a particular rf project may not involve a radio (for example, radio controlled planes), shouldn't make it off limits. If its rf, its still radio. How about radio controlled planes, Doppler radar, or VHF/UHF amplifiers?

APRS.

Lets get more people using the capabilities of APRS. All I see at Hamfests is a map with active locations showing. New interesting applications should be tested. Perhaps tracking a radio in a car. How about having both cars move, and one follows the other using APRS. Most Hams do not do this. This would be an interesting group activity.

Training.

Lets have dedicated training. Either in the clubs, or as training seminars for better amateur radio operation, emergency preparedness, etc. Clubs often just have one lecture and then some club business. Better to have some demo setups and have people use some radios. More training should be offered. However, I don't know how many Hams would like that or would be willing to pay for training. Topics could include: generator power, connector assembly, antenna tuning and setup, troubleshooting. Perhaps some rf measurements training. Maybe some circuit design topics.

DXpeditions.

Enjoy a DXpedition. One thing I have noticed is that Hams often go to DXpeditions and don't do anything other than operate radios. At one club meeting I went to, one person gave a presentation about how he went to this exotic location and all he did is setup antennas, and make contacts. He had nothing to say about that location. At a Hamfest, I saw a film of another group of Hams going to another country and all they did is setup antennas and make contacts.

I went to a DXpedition - definitely a vacation spot- with a group of Hams. I saw this tendency firsthand. They did exactly the same thing! I wanted to go to the beach, take a drive, etc., but the Hams were only interested in making radio contacts on various modes.

I don't see the point of the DXpedition. Were they doing a duty to that location, making sure the location is activated and gets QSOs? Working the location for a few hours qualifies as getting the benefits of working that location. There is no need to work the location for 8+ hours. They made contacts for hours throughout the day and through Saturday night.

It seems the only non-radio activity Hams participate is in eating. (I did manage to get a few road trips because I volunteered to pick up food. Most of the Hams stayed at the shack.) They missed out on the scenic beach, the small town atmosphere. What's the point of going to a vacation location if the experience is the same as working QSOs at home? There needs to be some balance.

Yesterday, I went to that club's cookout. As usual, the club was mostly older males. There were one woman. She asked what we did at the DXpedition. Perhaps she might attend next year's event. One of the people that went there said all they did is operate radios. The woman asked, "Is that all you did? You didn't go to the beach or anything?" I imagine, going to a vacation spot and not doing any vacation stuff is not appealing to women and young people. Also, the idea of making repeated contacts at a radio is boring to some people. Ham radio has a social component as well as a technical component. If you make the social aspect intolerable, few will want to stay in the hobby. Ham radio probably loses a lot of people this way.

Meetings at different places.
Hams have club meetings and other events. Often, these events are food related. Barbecues, weekly Saturday breakfasts, etc.

My suggestion is that instead of meeting weekly to eat, why not meet at a new "fun" place each week. How about the park, a boat ride, etc. Make it a new place every week. Cost is not the problem. Often these events cost less than the overpriced breakfast buffet. It may take some work (mostly scheduling and informing people), but not much. And it's well worth it.

Meet a Ham.
And lets try to contact Hams, not just short QSOs to work bands or locations for awards. This includes developing lasting contacts. And even the possibility to meet your contact off the air.

Lets overcome one's limitations, compete, and have fun. Feel free to add to this list. Feel free to do amateur radio "outside the box".

Just acquired a Kenwood TS-930S but did not get any manuals with it.
Can someone tell me where I can get a relay output to key my SB-200
amplifier? There are REMOTE and TRANSVERTER plugs on the back of the
rig so I assume there is a relay closure back there someplace. Any
help would be appreciated.

On the Icom-735 there's an accesory jack on the back. Pin 4 is "Input
to modulator stage for AFSK signals".

Does anyone know the voltage level that is supposed to go in to this
input?

I'm trying to hook the radio up to a PC for PSK31 mode.

Thanks for your help.

Never mind.  Thru trial and error I found that a 56 k ohm resistor does
the job nicely inline with my sound card line out.

I'm a newbie to digital modes on HF, and I have a frequency offset
question. For software I'm using MixW.

Say my radio is set to 14.070 MHz and I find someone calling CQ up two
kHz on the waterfall using FSK31. If I want to reply, to what frequency
should I set my radio?

Does the same offset apply to all digital modes? I suspect it does for
all USB transmissions.

Thanks for your help.

There are REMOTE and TRANSVERTER plugs on the back of the rig so I assume there is a relay closure back there someplace. Any help would be appreciated.

Just like any other Kenwood HF rig, the 930 is using the 7-pin DIN REMOTE connector for an amp interface.

Pinout:

1. (speaker out) n/a
2. amp relay common
3. (PTT standby) n/a
4. amp relay transmit (closed on TX)
5. amp relay receive (closed on RX)
6. ALC input from amp
7. +12V DC on TX

You do not have to adjust your radio. Just click your mouse on the

waterfall display where you want to send / receive. With MixW you can
open additional receive windows by right clicking on the waterfall.

Well, I copied it from my 850 manual, so I don't see how it could be
wrong for the later models. What is the pinout then?

Even worse is that in a device which actually includes cables, connectors and transmission lines is
that some of the differential signal gets transformed into a common mode signal and some of the
common mode signal gets transferred into a differential mode signal. Differential mode circuits are
officially defined in terms of their 4 transfer gains (Add, Acc, Acd and Adc) as described by
Middlebrook in his book on differential amplifiers. Judging from the lack of literature which
mentions the common to differential and differential to common mode transfers then I suspect that
it is not a well known phenomena by much of the electronics community.

Does any one know where I can get a wiring diagram for running a Yaesu FT-840 on the PSK-31 mode? I'm a home brewer and an unemployed electronics engineer so I have plenty of time on my hands and would rather build than buy anything other than the required connectors.

Techman,

Thanks for your contribution... As I thought, the transformation of
common mode to differential mode is a mistery (at least to us!).

Can someone help us with these doubts??

Regards,

Muriel

No big magic there David. Just abt everyone on PSK drives their rigs via the mic connector. Go to < http://www.digipan.net/ >, download the freeware and see the help files for building cables for the computer to soundcard interface. You may need an interface box too if you have rf loop problems, but that is not always the case. Try the easiest route first then go from there...Hope to cu on the screen soon...73 de Jay N3DQU

here is an equivalent circuit

```
  .---------+------ 100 ohms------100 ohms ------
  |         |
Vcommon    |                                     Vdiff
  |         |
  |         '------ 100 ohms---+--100 ohms ------
  |                            |
  |                          99900 ohms
  |                            |
  '----------------------------+--- round
```

1 volt of common mode voltage at the left
becomes 1 mV of differential voltage plus .9995 volts
of common mode voltage at the left.

Are you familiar with linear algebra and eigen vectors?

I just purchased an Icom IC-746 PRO and it sounds like people are talking in a tin can. Specifically on 2 meters. It seems to slowly go from good sound to "tinny". Any suggestions on this mammoth control panel of the 746.

Thanks
Chris Emerson W1JTO

Hi Chris!

Don't have a 746 PRO but have the same problem with my 706 MarkIIg when on two meters and have the NR (DSP noise reduction) turned on. Just turn the DSP off and that should solve it. I run the NR when using the rig on SSB and turn it off when working FM (not needed there)

Hope this helps es 73!

Will

Roy,

Please, don't come with "ready answers"... This way, this thread looks like a i]undergraduated class where the teacher wants to show its very deep knowledge to his humble pupil... That a thing for past centuries...

Until now, everybody answered sincerely, wanting to know a little bit more (not everything) about this subject and its premisses.

I'm asking questions about physical explanations to this phenomena:
common mode currents and differential mode currents. Don't come with a
bad designed draft of a circuit trying to tell me that I missed some
classes of algebra... Man, this is ridiculous.

Sincerely,

Muriel

Patience, eager student.

If my response sounded arrogant or condescending,
I apologize profusely, for no such intent existed.

Think of me as a dottering old fool who sometimes
asks painfully obvious questions.

Now, please tell this dottering old fool if
you understood the circuit and if you are
comfortable with Eigen vectors.

I wish to use my Drake power supply to run my Heath SB101
# Can I find a male Jones plug to plug into the power supply cable?
# If so, can anyone point me to a vender.
# Does the Drake power supply (for the TX4C) has enough
   12 volt filament current to run the Heath SB101, apprx. 5 amps?
Thanks for any help on these questions Darrell Darby WA4USO

> Can someone help us with these doubts??

Quite often they are caused by imbalances in the two "paths" that convey the common and differential mode signals through the various circuits of the system. In other words the effects on a single ended signal conveyed using one path is different to that when the single ended signal is conveyed using the second path. Imbalances include things like transmission lines being of different characteristic impedances for each path in the same section of the circuit, amplifiers having a different gain for a signal applied to one input than the other, transmission lines where one either leaks of picks up interference signals more than the other in the same section of circuit or baluns that have slight amplitude or phase imbalances on the balanced side.

You can make a start by analysing a differential amplifier where the voltage gain on input 1 with input 2 grounded is slightly different to the voltage gain on input 2 with input 1 grounded. Now apply both differential mode and common mode signals to this amplifier and find out exactly what the output is.

Roy,

First, Sorry if I seemed aggresive... trying to communicate with
written words sometimes is complicated... I'm a just a student, always
trying to learn more, and when people come with answers like yours I
always have the feeling that this someone is getting out of the focus
of the question... But it's Ok! I'm learning...

Well, I actually did not understand your schematic circuit... Could
you give an example to make things clearer?? Well, I had my classes of
algebra yet, and eingenvectors are not monsters to me (at least, I
think!! :-)

I'm waiting for your replies...

Regards,

Muriel

That gives us two ways to proceed. Lets do the vector space stuff first. By the way, I am a terrible two fingered typist, so if something doesn't make sense, there is a good possibility that I miswrote. Sometimes I come across like I have rabies or some dementia.

```
>>>> .---------+------ 100 ohms------100 ohms ------
>>>> |         |
>>>
>> Vcommon    |                                      Vdiff
>>
>>>> |         |
>>>> |         '------ 100 ohms---+--100 ohms ------
>>>> |                            |
>>>> |                          99900 ohms
>>>> |                            |
>>>> '----------------------------+--- round
>>>>
>>>>1 volt of common mode voltage at the left
>>>>becomes 1 mV of differential voltage plus .9995 volts
>>>>of common mode voltage at the left.
```

Well, let me get into the Eigen vector first.

I think others have set up the physical situation. Just to repeat, there are three "conductors". Two are the intentional transmission line. The third is called ground or return or neutral.

```
V1in   -------------------------------- V1out
V2in   -------------------------------- V2out
ground -------------------------------- ground
```

"Ground" might be an actual intentional conductor that runs along with the other two and it might be a large conducting plane of copper and it might just be the Earth itself and in some cases we take ground to be a conducting sphere with infinite radius of which we are inside, or as I like to say it the "Rest of Creation" (the ROC). For convenience, lets say that our intentional pair has an input side (the left side) and an output side (the right side). In general, V1out depends on both V1in and V2in. Likewise, V2out depends on both V1in and V2in.

So here is the vector space stuff. Take the pair of voltages at the input to be a vector in 2D space (V1in,V2in) and the pair of voltages at the output to also be a vector in 2D space (V1out,V2out). This may be obvious and it may not be obvious, but the output vector is just a linear transformation of the input vector. This is profound. If true, then all the truths that you know about vector spaces and linear algebra must apply to these voltages.

So, if we have a linear vector space transformation, then it probably has Eigen vectors. In particular, if the the two lines of the pair are identical and symmetrically placed with respect to the ground conductor, then the Eigen vectors are the common mode (V1in + V2in) and the differential mode (V1in - V2in).

Now, if the two lines are slightly different from each other, the Eigen vectors (or Eigen modes) are not exactly the common mode and the differential mode, but often those are close enough that we just go ahead and pretend that they are.

So if we put in a V1in, V2in pair of voltages, we can decompose those two voltages into the common mode and the differential mode, multiply by the respective Eigen values (common mode gain and differential mode gain) and we know what comes out.

I'll stop there. Let me know if this make sense.

Achilles: I wish my wish would not be granted.
           < an undescribable event occurs >
Achilles: What happened? Where's my Genie?
Tortoise: Our context got restored incorrectly.
Achilles: What does that cryptic comment mean?
Tortoise: The system crashed.

Hello all ,

who has some info about hi resolution smallband SSTV . I looked at google
but can't find any information about it .

Many thanks ,
Tom

There were many issues with the Pro, but I think Icom has resolved most. Did
you check with Icom service?

Roy,

Thanks for your explanation of "the basic that is not so basic as we use to think".. For the first time, I'm beggining to understand the meaning of "ground plane", specially with the concept of R.O.C. (very good indeed!)..

Now, the mathematical part: So, I have two vectors of input and two vectors of output. With them, I can extract the "transfer function" of the pair of conductors? Is that right?

And, depending on this transfer function, it generates more or less common or differential mode, right?

Please, if you can, send me a numerical example of our hypothetical situation, to make things clearer. If it's difficult, you can e-mail it right to me...

Thanks in advance and Regards!

Muriel

Buxcom has the RASCAL, $20.00 USD kit, easy to assemble and very well documented, pictures and diagrams even a little solder. Order the correct cable for the radio and with in about an hour construction you can be on the air, Buck even supplies a CD with free software for digital modes. Have been using one for over two years, and never had a problem. You can't find a lot of these parts at Radio Shack any more, and places like DigiKey and Mouser have $25.00 minimum order.
http://www.packetradio.com/psk31.htm
Also for set up please view this page so you don't splatter all over the band!

A differential mode circuit can be considered as a black box with 4 signal terminals plus ground. The ground terminal is simply used as a voltage reference point for both the common mode and differential mode voltages and may or may not be connected to anything inside the black box itself. In fact there might not be a real ground anywhere near the black box at all. The black box has two ports each of which are comprised of a pair of terminals. Port 1 is the input and uses terminals 1 and 2 and Port 2 is the output using terminals 3 and 4. Both ports are capable of conveying both common mode and differential mode signals.

At the input (Port 1):

The differential mode voltage is   Vdm1 = V1-V2
The common mode voltage is   Vcm1 = (V1+V2)/2
The differential mode current is   Idm1 = (I1-I2)/2
The common mode current is   Icm1 = I1+I2

At the output (Port 2):

The differential mode voltage is   Vdm2 = V3-V4
The common mode voltage is   Vcm2 = (V3+V4)/2
The differential mode current is   Idm2 = (I3-I4)/2
The common mode current is   Icm2 = I3+I4

All terminal voltages are referenced to ground.

In an ideal circuit there is no common mode to differential mode or differential mode to common mode conversion so the output voltages are related to the input voltages by two gains, Add which is the differential mode voltage gain and Acc which is the common mode voltage gain. These gains are dimensionless quantities that can take any value. In many circuits Add is intended to have a significantly higher value than Acc as supression of the common mode signal is often desired.

Therefore:

Vdm2 = Add*Vdm1
Vcm2 = Acc*Vcm1

In a real circuit signal mode conversions takes place which are described by Adc the common mode to differential mode voltage conversion gain and Acd the differential mode to common mode conversion gain. They are also dimensionless quantities that can take any value. Adc and Acd are likely to be completely different values as a circuit may convert between modes better one way than the opposite way.

Therefore:

Vdm2 = Add*Vdm1 + Adc*Vcm1
Vcm2 = Acc*Vcm1 + Acd*Vdm1

In a nutshell this describes the general operation of a differential mode circuit.

To determine the four voltage gains the circuit should be stimulated with a pure differential mode signal and have both its differential mode and common mode output voltages measured which will give Add and Acd. Next the circuit should be stimulated with a pure common mode signal and have its common mode and differential mode output voltages measured which will give Acc and Adc.

The magnitude of Adc gives an indication on how susceptable to interference the circuit is and the magnitude of Acd gives an indication of how much interference the circuit generates.

Another figure of merit for a circuit that is intended to suppress the common mode input voltage is the common mode rejection ratio or CMRR which is Add / Acc and normally quoted in DB as CMRR(dB) = 20log(Add / Acc).

minor didactic point: you have two voltages at the input
which are components of a 2D vector, but other wise that is
right.

> And, depending on this transfer function, it generates more or less
> common or differential mode, right?

"generates" can mean several things, so I prefer to say
that the linear system (the transmission system) yields
Eigen modes that in many useful cases are exactly or
approximately the common mode and the differential mode.

> Please, if you can, send me a numerical example of our hypothetical
> situation, to make things clearer. If it's difficult, you can e-mail
> it right to me...

OK, this is a sort of analogous dc circuits. I don't
recall if you said you are familiar with dc circuits, but
here goes.

First a nice system

```
V1in ---- 45 ohms -----+----- 45 ohms ---- V1out
                        |
                      10 ohms
                        |
V2in ---- 45 ohms -----+----- 45 ohms ---- V2out

ground ----------------------------------- ground.
```

so, if you do the equations you get

(V1out - V2out) = 0.1(V1in - V2in) and

(V1out + V2 out) = 1.0(V1out + V1out)

so in this system, the Eigen vectors are (1,-) and (1,1) and the associated Eigen values are 0.1 and 1.0 or as an electrical engineer would say, the differential mode gain is 0.1 and the common mode gain is unity.

If you put in V1in = -V2in = 1, the common mode of the input vector is zero and the differential mode is 2. So we expect the output common mode to also be 0 and the output differential mode will be +0.2

Here is a system with a slight impairment

```
V1in ---- 45 ohms -----+----- 45 ohms ---- V1out
                        |
                      10 ohms
                        |
V2in ---- 45 ohms -----+-+--- 45 ohms ---- V2out
                          |
                        1000 ohms
                          |
ground ------------------+---------------- ground.
```

In this system, a pure differential mode input will produce and output that is mostly differential mode, but there will be a small common mode component. Like wise, an input that is purely common mode V1in = V2in will produce and output that is mostly common mode, but it will have a little bit of differential mode. The system does have eigen vectors and they are almost but not quite the common mode and the differential mode. At this point, it becomes a matter of judgment as to whether you can ignore the slight deviations or not.

I am selling ten (10) RCA 5876 NOS/NIB pencil triodes.

A picture is available at http://members.aol.com/ecc81/yardsale

Asking $100 for all ten. Prepayment by USPS money order, please. Or pay with PayPal and I can ship them out immediately.

INTERESTED? Please respond BY EMAIL to <OvrReactor@aol.com>, do not post.

Best regards,
Tom Mitchell

Good Evening,
Being relatively new to HF,
I was wondering if anyone knows of any HF nets that I might listen for.
The ARRL's listing is severely in need of updating their net listing.

One example of a net that I know of:

DAY: Tuesday
TIME: 8 PM EASTERN
FREQUENCY: 28320 USB
DESCRIPTION: Great South Bay Amateur Radio Club 10 Meter Voice Net (Long Island, NY)

Any Suggestions Greatly Appreciated.

You got it. I don't use any special gear here at all . Just speaker out to line in, and line out to the radio mike in. In my case, I use a homebrew mike setup on my icom, and I have to use a small preamp to have enough drive. My mike element plugs into the base of the mike stand. So it makes it easy. I can plug my line out to it also instead of the element. I also lower the gain a bit with a small trimmer inline. I use this setup for all digi modes. I work some PSK31, etc, but I probably work more SSTV than anything when it comes to that setup. Being I'm totally windows sound card driven these days, everything I do uses the same setup. I also have DSP and spectrum analyzer programs, counters, psuedo O-scopes, etc.. Sure makes it easy. Back in the older days, I used to use a hammcomm setup, but it's been pretty much dropped now. I see no need to use outboard interfaces unless you have a specific need. The only thing you really have to consider is gain to your radio mike input. Most need the gain reduced a bit for clean operation. You do have some control from the windows volume though. MK

I'm not sure what you mean by "smallband", but there has been some tinkering with the HD-SSTV. Digsstv, etc. I tried some of that here, but my puter was too slow. "500 mhz". I found out real fast you need some brute CPU horsepower and plenty of RAM if you want to do any good at that. Quite a few people were trying it out on 75m at night, including Art Bell and his bunch over on the west coast, but they seem to have sorta fizzled out on it lately. Either that, or I just haven't been listening enough. The software was experimental, and I *think* the makers pulled it off the net for now, but I'm not sure. Search for DigSSTV and HD-SSTV and see what you get. When it's working right, the results seem to be very good. But like I said, you need a 2 gig plus CPU if you want to be with the program. I'm fixing to upgrade before too long. Probably closer to 3 gig than 2.
BTW, the sound of it is like a modem trying to connect, but having a hard time, if you hear it on the air. A horrible sound...:/ I've been sticking with the older SSTV until I have the puter to run that stuff. The analog has plenty of modes and res's these days, and does pretty well for gov use. MK

You don't find that one since the ARRL only lists nets that are of a
PUBLIC SERVICE interest. Club chat nets are not listed.

Comment On This News Group

There is a lot of good stuff here, but also an incredible amount of junk.

Another place to reasonably discuss Amateur Radio is at the Yahoo Groups.

http://groups.yahoo.com/

Search for "Amateur Radio" get over 1200 places to discuss your interests, mostly without flames, insults, off-topics, false information, and the stupidity that is prevalent here.

Lots of Elmers have left here and are now on Yahoo Groups.

Just FYI

I used to monitor DX Clusters over 2-meter packet radio, this I understand. I see now that it has moved to the internet via Telnet. Very cool!

However the Microsoft Telnet client kind of sucks for this. Mostly because it doesn't echo my keyboard input.

Does anyone know better [free] software with which to monitor the DX Clusters? Seems the nodes around here are running on AR-Cluster.

I'm trying to understand how this all works so one other related question. I notice the DX spottings coming from all over the world. How did this come to be and how does it work? Where does the local node connect to the others?

Thanks for your help.

Alright, I am really utilizing these newsgroups for the upcoming hamfest. Just picked up a ts-820s. Looking forward to receiving it and reading the manuals before operation. (Sometimes I wonder if XYL has influenced me with that). I

would like to know some testing equipment I will need to get this rig in flight so that I can pick them up at the hamfest. I was reading some posts that talk about tuning the rig and it sounds like fun, albeit treated with respect like all high power electronics, but also more than a simple voltmeter will be needed. Any suggestions?

I had a TS-820 in the 1980's -- followed by a TS-830S --- 830 was a much better rig IMHO.

The TS-820S service manual will specify the test equipment needed.
For the manual See URL: http://ac6v.com/manuals.htm

I would borrow the test gear unless you forsee the need for same for future and other uses.

I would wait until I had the manual to see exactly what TE is needed -- but:
Just off the top of my head.You would need:

Signal generator -- up to 30 MHz (low drift is desireable)
Frequency Counter up to 30 MHz.
Audio generator - maybe.
VTVM or Solid state version with RF probe -- you can make a probe -- see URL:

http://www.geocities.com/om6523/

Variety of tuning tools -- to tune the IF and RF cans.
Lots of goofy ones here hex, slotted, others. A non metallic slotted screwdiver also.

Oscilloscope would be helpful as I recall.
Maybe more but this would get you started.

Some of the Heathkit late models TE (solid state) are very resonable.

An SWR and power meter will be useful for maintenance as well as operating and loading into antennas.

A Heath Dummy load is useful for off-the air transmitter adjustments.

URL http://www.geocities.com/om6523/ is for a TS-830 but the TS-820 is similiar.

TWo caveats -- there is high voltage floating around in these rigs -- careful !!!

Never tweak down on the tuning slugs to where they start to bind -- you'll have a devil of a time unloosening them.

Good Luck

You could also try a software-defined repeater called EchoStation

http://www.k1rfd.com/sc/

all you need is a computer with a sound card.

Take a look at SpotCollector, a member of the freeware DXLab Suite.

SpotCollector can be simultaneously connected to four telnet clusters, the DX Summit web cluster (via IRC), and a VHF/UHF packet cluster (via external TNC). Spots are placed in a database where they can be filtered and sorted in real-time. Multiple spots of the same DX station on the same frequency are merged into a single entry, making it easier to see what's going on. When combined with other members of the Suite, spots can be automatically plotted on a world map, and color-coded based on whether or not a QSO with a spotted station is "needed". Double-clicking on a spot will QSY your transceiver to the correct frequency and initialize a log entry.

Like all members of the DXLab Suite, SpotCollector is available via www.qsl.net/dxlab .

The wife just told me that the old set of Bon jovi had three large
satellite antennas, and she read on a US paper that they are going to
scrap them or sell em off cheap...

By the looks of a picture i saw they must be about 6m at least ..

I wonder what the cost of shipping to the UK would be ....

let alone trying to fit in my back garden ..

anyone know Jon Bon Jovis email address ??????

Mike

A) there could be an automatic time limit on approval, not sure as the

Yahoo Groups I moderate do not use this feature.

They are either completely open for all to join (moderator can remove
a problem poster) or closed, such as a Board of Directors, where only
the moderator can add someone directly.

B) some perceive a hotmail account as suspicious, and filter out
everything from a hotmail address and some other domains. Observation
on my part, not agreement.

Happy trails,

Amateur Radio Newsline™ Report 1353 – July 18, 2003

Amateur Radio Newsline report number 1353 with a release date of Friday, July 18th 2003 to follow in 5-4-3-2-1.

The following is a Q-S-T.

WRC 2003 says no more Morse but it may be years before codefree operation comes to the USA. Find out why on Amateur Radio Newsline report number 1353 coming your way right now.

(Billboard Cart Here)

**

INTRODUCTION

G’day and welcome to the first Amateur Radio Newsline report ever recorded in Australia. I’m this weeks host Graham Kemp, VK4BB, at the Q News studios in the city of Brisbane. And our first story as you might expect has to do with WRC 2003.

**

WRC FALLOUT: S.25 AND A CODEFREE USA

The now concluded World Radiocommunications Conference may have rule that Morse Code is no longer a world standard for getting a high frequency ham license, but don't expect it to disappear very quickly in the USA. That's because there's lots to be done by Congress and the FCC before any action can or will be taken. Our team coverage starts here:

--

I'm Bruce Tennant, K6PZW in Los Angeles.

The International Telecommunication Union has dropped the international requirement that amateurs operating below 30 MHz must first pass a Morse code exam. According to the CQ website, this was among several actions related to amateur radio taken by the World Radiocommunication Conference and reported by the International Amateur Radio Union. The change took effect on July 5.

According to the IARU, the new language of International Radio Regulation Article 25.5 now reads: "Administrations shall determine whether or not a person seeking a license to operate an amateur station shall demonstrate the ability to send and receive texts in Morse code signals."

This leaves the question of requiring a code test optional for each government licensing authority. According to an IARU explanation, several countries still feel the code is important as a license requirement and wanted to be sure that any country dropping it did so via what it called a positive decision not to require Morse.

In the United States, FCC rules continue to require passage of a 5 word-per-minute code test for access to the amateur bands below 30 MHz, although it is widely expected that opponents of the code requirement will quickly file petitions with the FCC to drop it.

How long will it take? Amateur Radio Newsline's David Black, KB4KCH, has that part of the story from our South East bureau in Birmingham Alabama.

--

Nobody can be quite certain when or even if the Morse requirement will disappear in the United States, but here's the way it has to play out thanks to the way our government works.

Since the agreements reached at WRC '03 are essentially an international treaty, the document has to be ratified by the United States Senate. Depending on their workload, that could happen before years end or it could be put off into the 2004 session or even beyond.

Senate approval has to take place can the FCC begin the process under the Administrative Proceedures Act and issue a Notice of Inquiry. A Notice of Inquirey or N-O-I is the first step in the rule making process to make any change and gives the general public a chance to voice its opinion. And by public we mean every American. Not just ham radio operators.

If there is enough interest shown in going ahead then a Notice of Proposed Rule making will be issued that again invites public comment. This will be followed by another time period for reply comments by those who might have arguments to counter what some initial commenters have to say. Then matter goes to the staff to prepare a Report and Order or Memorandum, Order and Opinion that is circulated to the five Commissioners who run the agency. If they approve, then the change become law on a date specified in the document.

So once again the rhetoric question of how long? Here's our guess. About two years minimum from the time the Senate ratifies the accords, but only if the FCC decides to proceed immediately there after.

Why two years? Well as Fred Maia W5YI of the NCVEC pointed out to us, since Novice Enhancement some two decades ago, just about every major change in the structure of ham radio has taken about two years. Fred is a pretty good Washington watcher and his guess is 2005 at the earliest. But for now, we will all have to just wait and see.

For the Amateur Radio Newsline,. I'm David Black, KB4KCH, reporting.
Graham..

--

As we go to air, the ARRL Board of Directors is meeting to discuss the WRC '03 agreement and its impact on the U-S Amateur Service. Next week the people who give ham radio tests -- the VEC's will be meeting with the FCC to do the same. (IARU, ARRL, CQ, FCC, ARNewsline(tm))

**

WRC FALLOUT: SWITZERLAND GOES 100% NO-CODE

Meantime, Switzerland may be the first country in the world to take advantage of the revised Radio Regulations. According to the website of the Swiss national amateur radio society, the licensing authority there will be writing to all Swiss CEPT Class 2 amateurs to give them "provisional authorization" to immediately start using the High Frequency bands.

Meantime the Radio Society of Great Britain says that nations Radiocommunications Agency has already stated that it will bring in code-free High Frequency licences as soon as it is practical to do so. An announcement will be made as soon as permission is given for United Kingdom Full and Intermediate Class B amateurs to start using the H-F bands. (RSGB)

**

WRC 2003 FALLOUT: IMPROVED EMERGENCY COMMS - WORLDWIDE

Ham radio emergency communications also got a boost at WRC '03. Jeramy Boot, G4NJH, is in Nottingham England with more:

--

Paul Gaskell, G4MWO, the RSGB Radio Communications Voluntary Services National Co-ordinator, has pointed out the enhancements to amateur radio emergency communications that have come about due to the revision of Article 25 of the ITU Radio Regulations.

Article 25.3 now reads: "Amateur stations may be used for transmitting international communications on behalf of third parties only in the case of an emergency or disaster relief. An administration may determine the applicability of this provision to amateur stations under its jurisdiction."

This is a notable change from the old wording, which was: "It is absolutely forbidden for amateur stations to be used for transmitting international communications on behalf of third parties."

Paul says, "A completely new regulation, Article 25.9A, has been approved, a provision which needs no explanation: It reads: 'Administrations are encouraged to take the necessary steps to allow amateur stations to prepare for and meet communication needs in support of disaster relief.'"

It is hoped that administrations will make regulations that facilitate amateurs preparing for emergency situations and providing communications in emergencies and for disaster relief. This was an important IARU objective.

Jeramy Boot, G4NJH

--

Reports from the 2003 World Radio Communications Conference and its impact on Amateur Radio can be found on the IARU website. Its in cyberspace at www.iaru.org. (RSGB)

THE WAR ON TERROR: FCC ESTABLISHES OFFICE OF HOMELAND SECURITY

The FCC has taken another important step in helping to fight the war on terrorism. This as the agency names James Dailey as Director of the its newly established Office of Homeland Security.

Operating under the Enforcement Bureau umbrella the FCC Office of Homeland Security will deal with many emergency related issues including those involving

Amateur Radio. It will also oversee the establishment of an Emergency Relocation Board or E-R-B. The E-R-B will deal with the evacuation of FCC headquarters with little or no advance notice as well as overseeing the relocation of selected FCC staff members. More is on the web at: http://hraunfoss.fcc.gov/edocs_public/attachmatch/FCC-03-167A1.doc and http://hraunfoss.fcc.gov/edocs_public/attachmatch/DOC-236436A1.doc (CGC Communicator)

**

RADIO LAW: AB-1228 SIGNED BY GOVERNOR

California hams now have their own PRB-1 “like” protection. This as Governor Gray Davis signs Assembly Bill 1228 on Monday, April 14 th.

Assemblyman Bob Dutton and his staff shepherded the measure through the Local Government Committees and the floors of both houses of the legislature. It eventually passed without a single dissenting vote. The new law officially recognizes the doctrine of Federal preemption as outlined in PRB-1 over Amateur Radio antennas and their support structures as now being California state law.

In his cover letter to the California Legislature, Governor Davis took time to acknowledge the numerous Californians who are licensed amateur radio operators. He said that each year these volunteers give thousands of hours of service to the state and local governments. He added that since the September 11, 2001 attack on America, the state has also have come to rely on them and appreciate their commitment to the security and well being of all those living in the state.

California is the 20th state in the nation to adopt PRB-1 like ham radio anenna legislation. (ARRL SW Div. Bulletin)

**

RESCUE RADIO: RACES VS. FIRES ON THE 4TH

Radio Amateur Civil Emergency Service volunteers acted as dispatchers for the Huntington Beach, California, Fire Operating Center over the July 4th holiday weekend. Operating from the city’s Central Net Training Center, eleven members of the towns own Radio Amateur Civil Emergency Service took incoming fireworks related calls from the public, verified addresses, and dispatched the appropriate fire patrol arson investigator teams.

But thats not all. Two communications volunteers were also assigned as spotters on the roof of City Hall. Two other hams got the experience of a lifetime when they lucked out and were attached to the Huntington Beach Police Department eye-in-the-sky helicopter.

Equipped with digital cameras interfaced to two-way ham radio gear, the field team transmitted live slow-scan television images from their lookout locations to the Fire Operating Center and the Huntington Beach Police Department sub-station command post. Glorria Morrison, who is the city’s Emergency Services Coordinator said that everyone is proud to have such an extensive network of dedicated and skilled communications volunteers in Huntington Beach. (KH6WZ)

RESCUE RADIO: VARACES PULLS OUT OF VA STATE EOC

Meantime, a big change in emergency communications support has taken place in the state of Virginia. Amateur Radio Newsline's Don Wilbanks, AE5DW, has the rest of the story:

--

The tug of war between the independent VARACES Incorporated and the ARRL affiliated Virgina state ARES and RACES group has tipped in favor of the ARRL group. This, according to the latest Repeater Journal that reports VARACES State Emergency Officer Tony Amato, KR4UQ, annouced in March that he and other officers were withdrawing support of operations at the state Emergency Operations Center in the city of Richmond.

VARACES had been providing staffing for the E-O-C since 2001. This following its split from the ARRL after the League's Executive Committee removed Lynn Gahagan, AF4CD, from his post as Virginia Section Manager. Amato, who had been Gahagan's S-E-C cited difficulty in working with the states Department of Emergency Management Operations Director Fred Vincent. Amato claimed that Vincent would not make a clear choice between his group and the ARRL. For his part, Vincent had stated a desire to work with volunteers from both ham radio groups.

For the Amateur Radio Newsline, I'm Don Wilbanks, AE5DW, reporting.

--

Those leaving have been replaced by a ham radio group organized by the local Richmond Amateur Radio Club. (Repeater Journal)

OMARC 2003 TECH CLASSES IN SEPTEMBER

Steve Hajducek, N2CKH, says that the The Ocean-Monmouth Amateur Radio Club of New Jersey will again sponsor Amateur Radio Technician theory classes this fall. Classses beginTuesday, September 16th at 6:00pm and will continue through November. All training and testing will be held at the InfoAge Center in Monmouth County, New Jersey. For more information and directions go to www.qsl.net/n2mo on the World Wide Web. (OMARC)

**

NEW FOR HAMS: GLOBAL OVERLAY MAPPER

Tim Makins, EI8IC, in County Roscommon Ireland says that what is perhaps the most comprehensive set of world prefix maps ever assembeled is now freely available. This, in the demonstration version in his new Global Overlay Mapper software.

Makins says that Global Overlay Mapper represents a new concept in the field of maps for radio amateurs. That the software is packed full of features for all Amateur Radio enthusiasts, including seven Continental maps, 27 Sub Continental Maps, country outlines, 2204 maps of major cities C-Q zones, ITU zones, time zones and much more.

The on-line demo-version comes with with two fully featured maps to view. Online purchasing of the whole package is availasble in four major currencies. Download for use on your own computer and try it at www.mapability.com or www.qsl.net/ei8ic (EI8IC)

**

YOUTH RECRUITMENT: SPECIAL OFFER FROM HAMTESTONLINE.COM

The HamTestOnline website has announced its new Youth in Amateur Radio program, which gives eligible school, scouting and youth amateur radio clubs a 50% discount on website subscriptions for students 18 and under.

HamTestOnline says that its offering this discount to support activities aimed at bringing kids into amateur radio such as the ARRL's The Big Project. For more information on the HamTestOnlineT website's Youth in Amateur Radio program, visit www.hamtestonline.com or send an email to K1RV@hamtestonline.com (Press release)

FOR YOUR READING PLEASURE: UNDERSTANDING, BUILDING AND USING BALUNS AND UNUNS FROM CQ

If you're interested in how antennas work but don't know an unun from an onion, Understanding, Building & Using Baluns & Ununs from CQ Magazine should be part of your ham radio library.

The new book by Jerry Sevick, W2FMI, is the successor to his earlier work, Building & Using Baluns & Ununs. The new edition includes new tutorial material, designs and explanations of how and why they work. And like its predecessor, this book provides a unique opportunity to learn about the application of these devices to dipoles, Yagis, log periodics, Beverages, antenna tuners and countless others.

Interested? You can find out more and place your advance order on line at www.cq-amateur-radio.com. Orders may also be placed by phone -- Monday through Friday -- 9 a.m. to 5 p.m. Eastern time at 1-800-853-9797. (CQ)

5 MHZ FOLLOW-UP: OPERATING TRENDS DEVELOP

A follow-up now on what’s taking place on the new domestic United States 5 MHz allocation. As reported last week, opening night on July 3rd saw many stations making rapid contacts and cooperating together for an enjoyable operating experience. Now, according to noted High Frequency back-pack operator Bonnie Crystal, KQ6XA, the novelty of the 5 MHz channels has settled down to a usable level for calling and QSO’s.

Writing to the q-r-zed dot com website Crystal notes that 5 MHz daytime propagation out to 250 miles is good, although summer noise limits the comfort level when working the 50 Watt domestic stations. Nights bring good D-X and regional propagation, but lightning storms tend to make it harsh in some areas.

But her most important observation is that of a very positive trend. KQ6XA says that hams still are acting like they are on their first date, treating the new channels appropriately and showing off their best operating habits. She says that they are observing the kind of brevity in operating procedures commonly used on a high-level VHF repeater or regional linked F-M system.

Crystal adds her hope that in the future 5 MHz will continue to be an example of the best ham radio good operating techniques and behavior. From listening on the air, many others appear to agree. (qrz.com, ARNewsline (tm))

INTERNATIONAL - AUSTRALIA: 5TH ANNUAL IARU REGION 3 ARDF GAMES ANNOUNCED

The IARU Region 3 Amateur Radio Direction Finding Championships will be held Friday, November 28th to Wednesday, December 3rd in Ballarat Australia.

Ballarat is a large provincial city in the state of Victoria. The Victorian ARDF Group, which is organizing the event says that it is expecting up to 100 participants from member societies in IARU Region 3 including Japan, Korea, China, New Zealand, and Australia. Guest competitors from other IARU Regions are also invited to attend in the world-wide Friendship categories.

This years championships are hosted by the Wireless Institute of Australia, with the WIA Victorian Division sponsoring this important event. Full details including competitor and volunteer registration forms can be found in cyberspace at www.ardf.org.au (WIA)

**

AWARDS: WORK A COLORADO MOUNTAIN

Two new awards are now available for ham radio contacts to and from the

14,000-foot mountains of Colorado. The Summit Award is earned by making contact with 10 or more stations operating from the peaks. The companion Pinnacle Award recognizes operation from 14,000 foot summits, requiring radio operation from 5
or more of the peaks.

Award recipients will receive an attractive, colorful certificate with name, call sign and the number of peaks worked or activated on it. A $5 fee is required to cover the cost of the certificate and any associated expenses.

To get yours, first hold the QSO's and then take your web browser to www.Colorado14erEvent.org. Questions should be directed to Paul Ermisch KB0LUR by e-mail to awards@colorado14erevent.org. And colorado14erevent is all one word. (K0NR)

**

DX

In DX, keep an ear open for GM3PPG stroke P to be active on 160 to 10 meter S-S-B from South Uist through August 8th, including the RSGB IOTA Contest on the 26th and 27th of July. The island counts as EU-010 for the RSGB Istands on the Air awards program. (GB2RS)

And R1PQ will be on the air from the Novaya Zemlya Archipelago through the 25th of July. Activity will be on 40, 20, 15 and 10 meters using CW, SSB, PSK and RTTY. The operation commemorates the British, Russian and American polar convoys between 1941 and 1944 and will have two stations active 24 hours a day. (GB2RS)

**

THAT FINAL ITEM: 73 TO THE W5YI REPORT

And finally this week we pause to bid farewell to a competitor and a friend. This, with word that the W5YI Report ham radio newsletter has ceased publication with it's July 15th issue. Bill Pasternak, WA6ITF spoke with Fred Maia whose call sign appeared on the famed publication and they reminisced about the past:

--

The W5YI Report was the last of the paper ham radio newsletters delivered by the postal system. At one time there were three. The very first was H-R Report from Ham Radio magazine in 1974. It was eventually taken over by Burt Hicks, WB6MQV and renamed the Westlink Report. Hicks ran it for 13 years before closing down in January of 1995.

The ARRL Letter came into being in 1981 as a public version of the previously private ARRL Directors Letter. It initially dealt only with matters of interest to League members, but over the years has developed into a high quality publication covering every aspect of the hobby with items of interest to members and non-members alike.

W5YI Report was started by Fred Maia, W5YI in the late 1970's. This, as an information provider to the Richardson Wireless Klub near Dallas Texas. Other hams who saw it asked Fred to make it available to them:

--
Audio only at www.arnewsline.org
--

Initially Fred did not charge for those who supplied him with self addressed stamped envelopes. Eventually his subscription list grew to a point where Fred had thousands of envelopes in his home and the numbers were getting out of hand. So he decided to simplify matters by converting to a paid subscription operation.

--
Audio only at www.arnewsline.org
--

And as soon as word got out that Fred was accepting subscriptions, they came pouring in. And the rest -- as they say -- is history.

In 2000, Fred sold his company that included the newsletter, but agreed to stay on for three more years with the W5YI Report. He set this summer for his departure. July 15th was the publication date he selected and that's now past:

--
Audio only at www.arnewsline.org
--

If you are a paid subscriber to the W5YI Report, fear not. Fred has you covered. He has arranged for the remainder of your subscription to be covered by C-Q Magazine based on the value of the remaining portion of your subscription. And if you already get C-Q, your subscription will be extended by the appropriate number of issues.

For the Amateur Radio Newsline, I'm Bill Pasternak, WA6ITF, with my longtime ham radio friend Fred Maia, W5YI.

--

And what about Fred? He is not going away by a long shot. To find out what he has planned for his own future and his thoughts on the future of ham radio, be sure to tune into this weeks RAIN Report. Its on-line in streaming audio right now at www.rainreport.com and on the phone at 847-827-7246

Hi Craig
I run a yahoo group and find that @hotmail and @yahoo are common email addresses for spammers. Perhaps the moderator has set up a system that filters these out.
On my group the first posting by any new member comes to me, if it's spam out they go, harsh but sadly a necessity in today's world of "enlargement" drugs etc.

Craig wrote:

Actually, I had meant but not explained well enough, that if the moderator does not approve it with a certain time, perhaps it automatically gets returned.

If the moderator is on vacation, as is the case with many in the US this month, perhaps this happened.

You could also establish a Yahoo identity, through Yahoo Groups, to
join the group without revealing your ISP address.

Happy trails,
Gary (net.yogi.bear)

Consider 20 meters. Shorter antenna (with qrp, antennas are important). Less static and noise. Plus, better distance than 40 or 80.

Go to the Ten-Tec web site, and look at the qrp rigs there, especially the 1320. (They're having a sale now).

Vectronics is a little wiggly, when it comes to electronics. A Ten-Tec rig would score you better service and quality.

Have fun...

Bob

For one thing, I have been to Hamfests and I have enough knowledge to back my opinions.

Also, I would take the challenge of showing me different. If you know of a Ham radio event that does not fit the profile, the lets see. I can't move to CA, so I don't know about Old DXer's claims.

Ham radio is 95% male, 25% overweight, 50% older (perhaps). They like to contact people on the radio, but not in person. And they don't encourage technical skill. They just want to contest and do Morse code. I've been to many Ham radio clubs, Hamfests, and Ham gatherings. These are the Ham radio demographics and you cannot deny that.

I did ask how Hams could wake up so early for a breakfast, addressing the
anti-social nature. Also, I did make the point that it is mostly male, and the
other Ham acknowledged that. Other than that, I need to make more of my points
face to face, even if I don't get re-invited.

I won't go to a Ham radio meeting and say a significant percentage of Hams are
fat, for obvious reasons.

Normally I wouldn't bother to reply.  However, if only 25% are overweight
then they are doing good as over half the general population is carrying
excess weight.  And since 50 % of the general population is older, it's
quite reasonable for half the hams to be older.

I think this is the same troll that's failed in another news group by the
way.

It seems your goal is for simple construction and you feel QRP/CW is the way to go. Seems like you are not fixed on QRP itself, just as a means to begin building circuits.

If you are a newcomer there are easy enough kits to build that don't require CW. Overall they would be less complex since they don't require learning Morse code.

FM broadcast transmitters require few parts and they can get you experimenting right away. They can be modified for VHF frequencies also.

There are schematics out there and they can work on Shortwave/HF that only require a few stages. Just as simple as a Morse code kit, such as well advertised rock-mite Morse code transmitter. Also ATV can be build simply enough.

There are many ways you can go that are easy starting projects that don't require CW.

I'm about to take a cruise around Europe, and am taking my VHF/UHF HT with me (I've gathered all the details I need to operate legally).

I'm programming my radio for the trip, and have started to notice that repeater pair in Europe seem to be coordinated across the continent.
A quick look at this page will show what I mean:
http://home.hccnet.nl/w.l.hoogenboom/relais.html

I've been programming each country on my trip separately, but is it necessary? What if I simply programmed the "Rx" and "RUx" pairs for all possible combinations, and leave it at that? I can keep a note handy with something like "Athens, R1, R7" on it. Any drawbacks to this?

Also, if anyone's done this before and has some tips, it would be great. My rig is a TH-D7, so I hope to do some APRS as well while I'm there, as well as some satellite.

John

Washington, D. C. 20554

In the matter of Amendment of Part 15 of the Commission’s Rules to allow certification of equipment in the 24.05 – 24.25 GHz band at field strengths up to 2500 mV/ m

ET Docket No. 98- 156

MEMORANDUM OPINION AND ORDER

Adopted: July 15, 2003 Released: July 21, 2003
By the Commission:

INTRODUCTION

1. By this memorandum opinion and order, we deny the petition for reconsideration filed by the National Association for Amateur Radio (ARRL) [1] in response to our Report and Order in this proceeding. [2] We affirm the decision to allow the unlicensed operation under Part 15 of the Rules of fixed point-to-point transmitters in the 24.05 - 24.25 GHz band at field strengths up to 2500 mV/m. We reject ARRL's argument that such operation will result in an increased risk of interference to licensed amateur operations.

BACKGROUND

2. In the Report and Order, the Commission amended Part 15 of the Rules to allow unlicensed operation of fixed point-to-point transmitters in the 24.05 - 24.25 GHz band with field strengths up to 2500 mV/m. [3] The Commission also adopted strict frequency stability requirements to limit out-of-band emissions to minimal levels. [4] The Commission further decided that such devices must use directional antennas with gains of at least 33 dBi or a main lobe beamwidth not exceeding 3.5 degrees. [5] In taking this action, the Commission concluded that it is in the public interest to allow such operation on an unlicensed basis to supplement the growing demand for licensed point-to-point facilities that satisfy important communications needs.

Notes

[1] Petition for reconsideration filed by the National Association for Amateur Radio (ARRL), also known as The American Radio Relay League, Incorporated.

[2] Amendment of Part 15 of the Commission's Rules to allow certification of equipment in the 24.05 – 24.25 GHz band at field strengths up to 2500 mV/m, ET Docket No. 98-156, Report and Order, 16 FCC Record 22, 337 (2001).

[3] Report and Order at ¶7. 47 CFR § 15.249 (b)(1).

[4] Id. at ¶15. 5 Id., 47 CFR § 15.249 (b)(3). The Commission also licenses transmitters in the 24.05 - 24.25 GHz band under Part 90 of the Rules. 47 C. F. R. § 90. 103.

For example, the Commission concluded that increasing the field strength limit would promote greater use of Part 15 unlicensed devices for emergency restoration of communications in disaster situations, low-cost telecommunications delivery in rural areas, and other beneficial applications.

3. The Commission declined to adopt ARRL's proposal to require manufacturers to maintain detailed records of unlicensed transmitter installations operating with the parameters authorized in this proceeding and to supply this information periodically to ARRL for coordination purposes. It found that ARRL had failed to demonstrate a sufficient potential for interference or to provide any other basis for such a requirement. The Commission also reaffirmed its initial decision to exclude the 24.00 – 24.05 GHz sub- band due to the potential interference to primary amateur satellite operations and the uncertain operating characteristics of future amateur satellites in that band.

DISCUSSION

4. Petition for reconsideration. In its petition, ARRL argues that the power level and antenna gain/ beamwidth figures adopted in the Report and Order for fixed point-to-point equipment operating in the 24.05 - 24.25 GHz band are inappropriate for unlicensed operation under Part 15 due to the potential for interference to licensed amateur services. [6] In particular, ARRL is concerned about interference to the terrestrial amateur weak-signal stations that operate at 24.192 GHz within the 24.05 – 24.25 GHz band and notes that these stations utilize the same sensitive receivers as do amateur satellite communications in the 24.00 – 24.05 GHz sub band. ARRL contends that unlicensed fixed point-to-point operation in the 24.05 - 24.25 GHz band with 2500 mV/m and antenna gains of 33 dBi will create a "significant interference potential" to these licensed amateur services. [7] While admitting in their reply that it is proper for the Commission to make a determination of interference potential in each case, [8] ARRL asserts that the Commission improperly drew the line in this proceeding. [9] ARRL argues that the Commission's authority to authorize unlicensed operation under Part 15 is limited by Section 301 [10] of the Communications Act to instances where the Commission finds that there is not a "substantial" or "significant interference potential" to licensed services. [11] ARRL further argues that Section 302 (a) [12] obligates the Commission to limit the interference potential of RF devices, and creates no exception to the Section 301 licensing requirement for devices that have significant potential for interference to licensed radio services. [13] ARRL contends that if a RF device is found by the Commission to have a significant

Notes

[6] ARRL petition at 2.
[7] ARRL reply at 1 - 5.
[8] Id. at 3.
[9] Id. at, e. g., 17, and generally.
[10] Section 301 generally provides the statutory basis under the Communications Act for licensing the operation of “apparatus used for the transmission of energy or communications or signals by radio . . .” 47 U. S. C. § 301.
[11] ARRL petition at i, 5, and as clarified in ARRL reply at 1 - 5.

[12] Section 302 (a) states that “The Commission may, consistent with the public interest, convenience, and necessity, make reasonable regulations (1) governing the interference potential of devices which in their operation are capable of emitting radio frequency energy by radiation, conduction, or other means in sufficient degree to cause harmful interference to radio communications; and (2) establishing minimum performance standards for home electronic equipment and systems to reduce their susceptibility to interference from radio frequency energy. Such regulations shall be applicable to the manufacture, import, sale, offer for sale, or shipment of such devices and home electronic equipment and systems, and to the use of such devices.” 47 U. S. C. § 302 (a).

[13] ARRL petition at 1 and 7; and ARRL reply, generally, at 1- 5.

----

interference potential, it is improper for the Commission to rely upon the requirement to cease operation under Section 15.5(c) [14] in cases where harmful interference is being caused. [15] It also asserts that devices such as those authorized in this proceeding serve the same function as licensed point-to-point microwave services, and therefore require individual licenses. [16] Finally, ARRL requests that we “reconsider and reverse the portion of the Report and Order that addresses the Commission’s jurisdiction to authorize unlicensed operation of radio devices which have significant potential for interference to licensed radio services pursuant to Section 302(a) of the Communications Act...” [17]

5. On the other hand, as clarified in its reply, ARRL explicitly states that it does not challenge the Commission's general authority to authorize unlicensed operations under Part 15. ARRL also concurs that the Commission can make reasonable regulations regarding Part 15 devices pursuant to Section 302(a) of the Act. [18] Indeed, ARRL notes that it takes no issue with the bulk of the Part 15 decisions made by the Commission over the years. [19] ARRL states its belief that, below some interference potential, it is appropriate for the Commission to authorize unlicensed operation under Part 15. [20] In particular, ARRL accedes that the question of where to draw the line between licensed operation under Section 301 and unlicensed operation under Part 15 is "not a fixed, bright-line determination premised on an ERP or EIRP level, or a fixed field strength.” [21] ARRL further states that the line is "dependent in every case on those factors, plus, for example, duty cycle, bandwidth, antenna gain or loss, emission type, deployment area, and the number of devices to be deployed." Finally, ARRL acknowledges that "the Commission is the proper authority to draw the line in each instance, just as it does now."

6. Opposition. In opposition to the petition for reconsideration, the IEEE Project 802 Local and Metropolitan Area Network Committee (IEEE 802) and the Information Technology Industry Council (ITI) argue that the Commission properly concluded that the potential for interference

to licensed services from the systems authorized by the Report and Order is sufficiently low to allow their operation under Part 15. [22] ITI argues that, unlike the 24.0 – 24.05 GHz band, which is designated primarily for amateur satellite operation, the 24.05 – 24.25 GHz band is shared with Radio Location Services, Earth Satellite Services, Part 90 Private Land Mobile devices, Part 18 Industrial, Scientific and Medical (ISM) equipment, and Part 15.249 radio devices. [23] ITI notes that the systems authorized in the Report and Order for unlicensed operation under Part 15 in this frequency range are highly directional point-to-point systems. Consequently, ITI argues that, even operating at 2500 mV/m using narrow beam directional antennas, these line-of-sight systems, should not pose any undue or significant threat to licensed amateur operation. Opponents also uniformly disagree with ARRL's interpretation that Section 301 posits a bright-line "significant interference potential" threshold for requiring individual licensing. They argue that the Commission properly exercised its authority in the Report and Order to authorize unlicensed operation under Part 15 in this proceeding.

Notes

[14] Section 15.5(c) states: “The operator of a radio frequency device shall be required to cease operating the device upon notification by a Commission representative that the device is causing harmful interference. Operation shall not resume until the condition causing the harmful interference has been corrected.” 47 USC § 15.5(c).

---

7. Decision. At its most fundamental level, ARRL asserts that the Commission improperly concluded in the Report and Order that the unlicensed operation authorized therein would not create an increased risk of interference to licensed amateur services. Specifically, ARRL argues that unlicensed point-to-point operation in the 24.05 – 24.25 GHz band at 2500 mV/m creates a “significant” or “substantial” interference potential to licensed amateur services. We reject that proposition and, in doing so, also find the remainder of ARRL's petition to be without merit.

8. We affirm the central technical finding made in the Report and

Order, namely, that devices having field strengths up to 2500 mV/m and conforming to the specified directional antenna requirements are suitable for unlicensed operation under Part 15 in the 24.05 – 24.25 GHz band. In particular, we affirm the conclusion that devices operating within these requirements will not increase the interference potential to licensed amateur services in the band. [24] The Commission found that the use of a directional antenna would change the shape of the radiated field but not increase the total geographic area being radiated. In other words, while signals will travel further along the narrow path of intended communication, the signals will be limited in all other directions. [25] The Commission found support for this rationale in other proceedings which find that a directional antenna requirement would ensure that the area over which harmful interference can occur is equivalent to what would be caused by a transmitter using an omni- directional antenna operating at a lower output power. [26] The Commission further rejected arguments by ARRL that the decision strayed from an earlier Commission decision in Docket No. 79-337 that denied a request to allow low power, fixed systems in the 24.05 - 24.25 GHz band. [27] In light of the much higher transmitter output power levels involved in that proceeding (up to 100 mW, as compared with typically less than 1 mW herein), the Commission found that the interference concerns addressed in Docket No. 79-337 were significantly greater that those at issue in this proceeding.

9. Due to the very narrow transmit antenna beamwidth authorized in this proceeding, an amateur receive antenna is highly unlikely to be illuminated by an unlicensed transmitting antenna unless the two antennas are oriented in direct alignment. In the event that a boresight alignment occurs, any interference that might result should be readily identified for remedial action because of the fixed nature of the unlicensed operation authorized in this proceeding. Furthermore, as noted in the Report and Order, Part 15 field disturbance sensors are already permitted to operate at field strengths up to 2500 mV/m in the 24.075 - 24.175 GHz band segment. [28] These devices have been authorized for years with no adverse impact on other users in the band, including amateur operations. [29] Consequently, we agree with ITI that these line- of- sight systems authorized in the Report and Order, even operating at 2500 mV/m using narrow beam directional antennas, should not pose any undue or significant threat to licensed amateur operations. [30]

10. ARRL presents no new information concerning the interference potential of the devices authorized in the Report and Order and merely reargues its contention that the interference potential is so

----

great as to be inappropriate for unlicensed status under Part 15. We find that ARRL's arguments do little more than disagree with the technical analysis and conclusions in the Report and Order concerning the interference potential of the operation authorized therein. Bare disagreement, absent new facts and arguments, is insufficient grounds for granting reconsideration. [31] Furthermore, petitions for reconsideration are not granted for the purpose of altering our basic findings or debating matters that have been fully considered and substantively settled. [32] The resolution of the issue regarding the interference potential of operation with 2500 mV/m has been the central question of this rule making from the outset. Full opportunity for all affected parties to comment has been afforded and we have fully considered all relevant matters in the record. In the absence of any new information, and in light of our review herein of the analysis and judgments made in the Report and Order, we find ARRL's arguments about the increased interference potential to be repetitive and without merit.

11. According to ARRL, Section 301 of the Act requires individual licensing whenever there is a finding by the Commission of a significant interference potential to licensed services. Consequently, under ARRL's interpretation of our statutory authority, the purported violation of Section 301 has no basis unless we accept ARRL's proposition that the interference potential with 2500 mV/m is so high in this particular case as to be inappropriate for unlicensed operation under Part 15. As affirmed above, we reject the assertion that there is a significant interference potential from the unlicensed operation authorized in the Report and Order. Because we find no such significant interference potential, we need not reach ARRL's statutory argument.

12. ARRL also asserts that devices such as those authorized in this proceeding may be used to serve the same function as licensed point-to- point microwave services, and therefore must be licensed. [33] However, ARRL provides no support or rationale for the proposition that a device is per se disqualified from unlicensed operation solely because it may be used for a similar function as provided by another service that might be licensed. We find ARRL's contention in that regard to be without merit.

13. Finally, ARRL requests “that the Commission reconsider and reverse that portion of the Report and Order which addresses the Commission's jurisdiction to authorize the unlicensed operation of

radio frequency devices which have significant potential for interference to licensed radio services, pursuant to Section 302 (a) of the Communications Act...” [34] Citing paragraph 12 of the Report and Order, ARRL argues that “... the Commission is incorrect in its assumption that it has unfettered jurisdiction pursuant to Section 302(a) of the Communications Act to authorize unlicensed devices, regardless of the interference potential of those devices to licensed radio services.” [35]

14. We reject ARRL’s characterization of the Commission’s decision in the Report and Order. In paragraph 12 of the Report and Order, the Commission cited Section 302 of the Act as a basis for our authority to adopt rules governing unlicensed operations under Part 15. By way of explaining that authority, the Commission noted that the operating requirements of Part 15 appropriately provide a means for allowing unlicensed devices to share spectrum with licensed services with little risk of interference to licensed services.

Notes

[31] See, e.g., Regulatory Policy Regarding the Direct Broadcast Satellite Service, Memorandum Opinion and Order, 94 FCC 2d 741, 747-748 (1983) (citing, e.g., WWIZ, Inc., 37 FCC 685, 686 (1964), aff'd sub nom., Lorain Journal Co. v. FCC, 351 F. 2d 824 (DC Cir. 1965), cert. denied, 383 US 967 (1966); Florida Gulfcoast Broadcasters, Inc., 37 FCC 833 (1964); Employment Practices of Stations -- Charlotte, NC Market, 77 FCC 2d 1 (1980); WEOK Broadcasting, 4 Rad. Reg. 2d (P&F) 503 (1965)).
[32] Id.
[33] ARRL petition at i and 24.
[34] Id. at 1.
[35] Id. at 4 - 5. 5

Significantly, ARRL concurs in its reply that it is appropriate for the Commission to make reasonable regulations regarding Part 15 devices pursuant to Section 302(a) of the Act. [36] The technical operating parameters adopted in the Report and Order are designed to ensure that the interference risk will not be increased to licensed amateur services and we affirm that the rules adopted in the Report and Order are reasonable for regulating the unlicensed operation that was authorized under Part 15 in this proceeding. ORDERING CLAUSES

15. Accordingly, IT IS ORDERED that pursuant to Sections 4(i), 302, 303(e) 303(f), 303(g), 303(r) and 405 of the Communications Act of 1934, as amended, 47 USC §§ 154(i), 302, 303(e), 303(f), 303(g) and 405, the petition for reconsideration filed by ARRL IS DENIED.

16. IT IS FURTHER ORDERED that the proceeding in ET Docket No. 98-156 IS TERMINATED. FEDERAL COMMUNICATIONS COMMISSION Marlene H. Dortch Secretary

I am looking to buy user and maintenance manuals/circuits for the ITC
SA-1000 (100KHz - 1GHz) Spectrum Analyzer (circa early 1990's)

I understand that ITC was based in California and are now defunct. If you can assist with photocopies or PDF format, please advise cost and availability.

Thanks

I haven't seen much specific advice on this type of "DXpedition", so I thought I'd ask.

I'm from the US, and I'm taking a cruise around some European cities in the Med (France, Italy, Greece) and would like to do a little Ham stuff along the way. I don't have any portable HF gear, and the most amount of space I'd like to take up is HT-sized. (I've got a rock-mite, but my CW isn't good enough yet.)

My HT is a Kenwood TH-D7A(G), so VHF, UHF, APRS and FM satellite are open to me. I've read about and gathered the information and documents I will need on the trip for shore operations, and understand that to operate onboard I must get the permission of the captain.

All that aside, I'm looking for advice on operating in those countries, where the good repeater lists are, what I might expect, etc. This is the first time I'm operating outside the country, and could use some tips.

John

John I took my HT to Italy and operated under the CEPT Agreement -- served me well.

CEPT Agreement --- URL: http://www.arrl.org/FandES/field/regulations/io/

Operating Abroad -- URL: http://www.qsl.net/oh2mcn/license.htm and
http://www.arrl.org/FandES/field/regulations/io/recip-country.html

World Wide Repeaters URL: http://ac6v.com/repeaters.htm

I was denied operation aboard a Caribbean cruise ship -- just after 9/11.

Lately others I know were granted permission.

Learn a little of the country language "Such as I am an American tourist visiting -- USA callsign is ____"

VHFers may not speak English as well as the HFers. I had some success with Q Signals.
One Italian thought I was a bootlegger until I used Q-Signals.

Have fun.

The Old Dxer

Hi,

I was reading this thread and I found it opportune to ask some "basic" questions about some concepts, that I think that are not to "basic"...

Thinking in electrical circuit theory terms, what is a _ground plane_?? Is it just model or has a physical effect indeed?

The concepts: differential and common mode. These signals are in all "real" circuits, or are just model used to represent non-intuitive concepts? How they are generated/created?

Just to begin the discussion...

All the very best!!

Muriel

Ground planes are real. Best examples are in microwave circuits where the ground plane is usually very close to the transmission line in a stripline circuit. Look up references.

Usually at low frequencies the ground plane is considered to be at infinity for most circuits, except for transmission lines and coaxially to multi-axial cables.

Subject: Stay away from "Antenna Warehouse"
Message-ID: <20030723114538.07099.00000323@mb-m12.aol.com>
Xref: archiver1.google.com rec.radio.amateur:5615

I recently purchased a dualband base antenna from these clowns. In the auction, they stated free shipping. When I won the auction and wanted to pay, I asked to have the antenna shipped via USPS to my PO Box. All of a sudden, these scammers wanted $4.50 for shipping. I argued about it, but they told me either I have it shipped UPS for free (Their auction never stated UPS shipping only), I pay $4.50 for shipping by USPS, or they would cancel the order. I finally agreed, only because I wanted the antenna. I posted Neutral feedback because the item was fine and arrived in a timely manner, but they charged me the shipping. Now they're harrassing me. I blocked the email address from the first message they sent me. Because of this, they sent me the next email from another address.

Check out these two emails they sent me:

Subj: Interesting item on eBay web site item#3029570868: 6/8 dB 146/440 MHz. Dual Band Base FREE SHIP!
Date: 7/22/2003 7:28:06 PM Eastern Daylight Time

Thanks for your answer Joseph...

If possible, I'd like to hear from you about common mode and differential mode currents (or signals). They are always present in real circuits? My specific interest is in switched mode power supplies, its EMI generations mechanism and the resulting interference. If you (or someone else in this thread) could send me some information about this subject, I'd be glad.

Thanks in advance,

Muriel

> Is CW just FM without an audio signal?

No.
It's not Frequency Modulation.
It's not Amplitude Modulation.
It's not modulated at all.
It's just a Continuous Wave. (At least while it's keyed on. Of course,
intelligence is put on it by keying it on and off.)

You should use a receiver with a BFO (beat-frequency oscillator) to produce
an audible tone. Your FM receiver probably doesn't have one.

A ground plane is a (relatively) large conducting plane or flat surface. It is real. Think of a plate of copper. If we assign this to our reference potential, we can think of it as the ground plane. That is, it is at zero potential and all of our circuit voltages are referenced to it.

> The concepts: differential and common mode. These signals are in all "real" circuits, or are just model used to represent non-intuitive concepts? How they are generated/created?

These are also real. Given two conductors, if you apply a +V to one and -V to the other this is a differential signal(assuming |-V| = |+V|). They are used all over the place. Television 300 ohm "twin-lead" transmission line. The power lines running all over the country - and into the house (at least in the US).

Given two conductors, if you apply +2V to BOTH conductors (as if they are one) and use such a ground plane as a reference, this is a common mode signal.

> > Is a two conductor transmission line such as the 300 ohm parallel flat type cable used for VHF antennas being used to convey a differential mode signal that is at a large (approximated as infinite) distance from a groundplane capable of conveying a common mode signal as well ? A common mode signal can only be conveyed if one or both of the current carrying conductors is in proximity to a grounded structure. A two conductor transmission line conveying a differential mode signal has a virtual groundplane between its two conductors but does a common mode signal view this virtual groundplane in the same way as it views a real groundplane and travels along the transmission line or is it suppressed from the lack of a real groundplane ?

Hello,

I am looking for a "telephone patch", or something similar. I'm not into radios, and the application has nothing to do with radios, but I got the advice to ask here.

I want to be able to record a telephone call and on the same time myself provide the input signal (rather than talking into the handset). The reason is that I want to record a telephone call where I also can process my own voice when speaking, that is, speaking into a microphone, process the sound and then send it to the phone.

Some device with one audio connector in and one audio connector out would be perfect, and also of course some connection to the telephone, maybe to the headset connector.

There are simple and cheap devices where you can tap the conversation through an ordinary audio connector (less than $20), but I also would like to provide the input signal through a connector.

I am hoping to find something simple and inexpensive - preferrably less than $50. I am not into electronics so I won't be able to build anything myself; I am looking for a product to buy.

Thanks in advance.

Don't you realize they have to now visit the post office, wait in line, and pay for postage; rather then get the stuff picked up at the door for free via theft of their day job's UPS account

Does anyone have recommendations for interfacing an Icom-735 HF rig to a PC for PKS31 mode? The radio and PC both use the same AC outlet (ground). No TNC will be used.

Actually I'd like to try other digital modes too, so I wouldn't want the wiring to lock me into a particular mode.

There are so many different circuits to pick from so I'm confused.
Here's a few:

http://www.w5bbr.com/soundbd.html

Just use the VOX, or a 2N2222 transistor to a DB-9 COM port? Better yet an opto isolator! Heck, I don't know.

If anyone has done this I'd like to hear your opinion.

Thanks,
Bruce AF8F

> be 0dBm, where 0 is a reference to what power level ?

Decibels are a logarithmic unit.
Any number raised to the power zero is 1

therefore the log of 1 is zero.
decibels are tenths of a Bel
a Bel is the log to the base ten of a power ratio

in the case of dBm the reference power is taken to be 1 mW one milliwatt.

Therefore the ratio of any measured power to 1 mW is the thing that we want.
You have 1 mW of power so the ratio is 1mW/ the reference power 1 mW = 1

the log of 1 is 0
ten times the log of 1 is also 0
therefore 1mW = 0 dBm (the ratio to the reference power is 1)

that is: the power in which you are interested is equal to the reference
power of 1 milliwatt.

I hope that confuses you, :)

Paul here comes the "depends"

Some are good for general logging. Others are specialized like contesting,
DXing, etc. Some free, some pay.

Try the freebees and shareware and get a feel for what suits you and your
pursuits.

For logging programs a bunch -- See URL:
http://ac6v.com/logging.htm

I like Logger By Bob Furzer K4CY

Jamming Still Happening on the N9EE Repeater

Will the 146.640 ever be free of jamming?

Story By Robert Hartung - KE4JCD
Publisher of Hartung Press

Mr. Ronald A Wright, N9EE is no stranger to jamming on his repeater, for over 3 years the N9EE repeater has been plagued with jamming problems with no end in site... The FCC is also no where in site, and many keep asking the question, why? Refer to my story about N9EE on my new Amateur Radio News Page..

To hear what happen, run the recording..... This happen July 08, 2003 around 2 am....

http://www.hartungpress.com/hamradio/news/jammingonthe640.htm

The old Heath microphone I use(d) with my HW101 has finally died and
I need to get a replacement. Rather than trying to find another old
microphone for a replacement (e.g. off EBAY), I'd like to purchase a
new, current (reasonably priced) model microphone. Would appreciate any

helpful suggestions in this regard.

Beyond the microphone being high impedance (60K-100K?), and push to
talk, I'm not sure what I need to be looking for (or avoiding) when
looking through a current catalog of available microphones.

Thanks,
Paul
N6LQ

Hi all

Was wondering if there is anyone out there who can help? I have just purchased a 7 element ATN 18-30-7 log periodic that covers 18-30Mhz. I believe there is another ATN aerial with the same boom length of 6 metres that covers 14-30Mhz. I was hoping someone with one of these beasts could advise the element lengths etc so i can convert mine to cover 20metres. I assume i will need to rearrange the elements, drill alternate mounting holes and change some element lengths and make some crossover straps for phasing harnesses but thats just a formality. My aerial comes with a diagram of the element lengths etc so was hoping someone could scan and send. I could start from scratch and try and design a unit but this would save me a heap of time. It appears that ATN is long gone. Any help would be greatly appreciated. I have quite a collection of amateur radio related service manuals in pdf and or jpg format so maybe i can return the favour.

email for reference is tstone12002@yahoo.com.au

Thanks in advance.
Cheers
Tony

Well I use a Tennadyne T8 for 13.5 to 30 MHz. It is a 6 meter [18 feet] boom. I am not familiar with the ATN 18-30-7 LP.

But, LP design is based upon a specific ratio for adjacent lengths and element spacing. So, just 'fiddling' with adding elements and adjusting spacing gets to be serious business. You will have to re-space ALL elements on the boom, and increase the length of ALL the elements to achieve the desired ratios.

The ARRL Antenna Handbook has an excellent section on LPs. Buy or borrow a copy and read up on LPs. It's quite a project!

Was this one of the original EV microphones (as pictured in the Heath
catalogs)?

Dear Tony (VK2TS):

Nice to see a real antenna question from an actual radio amateur...

It seems to me that two of your choices are:

1. Distributing seven elements on the same boom using the same attachment points. All except the front (smallest) element could be lengthened by a constant ratio so that the rear (longest) element is self resonant at about 12 MHz. An estimate for the ratio by which elements are lengthened may be found by dividing 18 by 14.

Seven elements to cover the octave you are interested in on a six meter boom is OK, but a longer boom and a few more elements can provide less variation in VSWR with frequency and more gain.

2. It sounds as if the boom you have is of one piece. [One alternate scheme for the boom of a LPDA is to construct the boom in two pieces so that the boom is also the transposing transmission line.] I say this because you mention "crossover straps for phasing."

Thus an alternative is to leave what you have alone and extend the boom. Place additional elements along the extension spaced with the same ratio presently used and having lengths that progress with the same ratio presently used. This might involve the least amount of work and certainly would produce a better antenna. The extension of the boom might be a size larger than the present boom so as better to support the longer elements and so as to facilitate "splicing" to the present boom.

Extending is what I would do.

73, Mac N8TT

Hi Mac

The lengthening of the boom and the further scaling of larger elements does
sound like a damn good idea ! Thanks for the ideas,,,,much appreciated.

Cheers and 73's
Tony VK2TS

My personal preference is a pencil and an ARRL logbook. They are immune to computer crashes and much easier to learn and use.

Which is why I enter everything in both a computer log and a paper log book.
The computer log allows easy searches for prior contacts and sorting on
various criteria.  I use computer logging for contests as that is by far the
easiest way to track contacts and avoid duplicates.  After the contest, I
print out the contest log file and staple it in my paper log so I don't have
to manually write all that info in the paper log.

My favorite logging software is by N3FJP.

Windows 2000 and Windows XP are far more reliable than their predecessors; I
run Windows 2000 24x7 and haven't seen a crash or been forced to reboot in
many months. Logging applications have themselves become more reliable, with
built-in error-recovery and one-click backups. If you haven't tried one in
awhile, you might try again.

Hi,

First, let me say that I am new to Amateur Radio. I've had my license since February, but i've yet to purchase my first radio. I've decided on the Kenwood TM-D700A. I'm interested in APRS, Packet and 2M and 70CM operation for both voice and data. So i think that that radio will suit me well. My questions mostly are in reference to a suitable antenna/mounting solution. My plans are to utilize the radio for both mobile and base operations. Because of limited funds, my plan is to use a mag mount that I can put on a metal plate on a mast (homebrew) for base ops and mobile ops. I am interested in possibly focusing on an antenna for mobile 1st, then later getting a base dual-band antenna. Ok... now that that novel is out of the way, my questions. 1.) How important, in a mobile setup, is the ground plane (what exactly does it do)? What effect/performance differences would I see if we're talking about a mag mounted antenna centered on the roof of my car (2003 Ford Focus) versus mounting on the edge of the rear hatch, which would be on the side of my car? 2.) What are the pros/cons/differences between NMO mounts and UHF mounts? 3.) What kind of cabling should I be looking at considering the bands i'll be using? 4.) What tips do you all have as far as running the power and antenna cables?

If there are great websites that you all have found that you could pass my way are greatly appreciated.

Thanks in advance.

Jerky -- I'm just guessin as the header sez but from my experience:

"Jerky" <jerky@yourmom.com> wrote in message
news:cH6dnWJQjd49nI-iU-KYvA@comcast.com...

> Hi,
>
> First, let me say that I am new to Amateur Radio. I've had my license since February, but i've yet to purchase my first radio. I've decided on the Kenwood TM-D700A. I'm interested in APRS, Packet and 2M and 70CM operation for both voice and data. So i think that that radio will suit me well. My questions mostly are in reference to a suitable antenna/mounting solution. My plans are to utilize the radio for both mobile and base operations. Because of limited funds, my plan is to use a mag mount that I can put on a metal plate on a mast (homebrew) for base ops and mobile ops.

First a lot of VHF/UHF FM operation is thru repeaters and if they are local and nearby just about any antenna will work. Witness the very poor antennas on HTs that talk in to repeaters routinely. For 2M/440 DX work folks are often on SSB not FM. But if you want to access distant repeaters and extend your simplex range -- a gain antenna such as a Super Colinear may be in your future -- see
http://ac6v.com/antprojects.htm

But be aware of cross polarization -- for DXing repeaters and most FM base stations you want vertical polarization i.e., a vertical antenna -- most SSBers use horizontal polarization but not all by virtue of convenience.

You can have both a mobile antenna and a base antenna by buying a mag mount (or NMO) for the mobile and building a homebrew Base Antenna (easy and inexpensive)-- see URL:
http://ac6v.com/antprojects.htm
several to choose from -- the J-poles are popular.

> I am interested in possibly focusing on an antenna for mobile 1st, then later getting a base dual-band antenna. Ok... now that that novel is out of the way, my questions. 1.) How important, in a mobile setup, is the ground plane (what exactly does it do)?

The ground plane for most mobile antennas is usually the metal of the car. A vertical mag is only part of the antenna -- the system needs the other part -- the ground plane. So is important -- but a mag mount couples to the car metal to give satisfactory operation. I prefer a direct metal contact such as a hole in the roof and an NMO mount. Be careful in drilling a hole, modern cars have thin sheet metal and can buckle easily. If in doubt find the folks that install police and commercial radios -- they have special tools for this -- Motorola makes one such tool

>What effect/performance differences would I
> see if we're talking about a mag mounted antenna centered on the roof of
my
> car (2003 Ford Focus) versus mounting on the edge of the rear hatch, which
> would be on the side of my car?

My experience -- a NMO in the center of the roof gives a good 360 degree radiation pattern -- At the rear hatch -- it may suffer some attenuation in certain direstions, But you probabbly won't notice it when working local repeaters. I have had trunk lid mounts and center roof mounts and couldn't tell the differece for local repeaters. For the open road, perhaps the forward direction was down a bit with the trunk lid mount.

2.) What are the pros/cons/differences between NMO mounts and UHF mounts?

For VHF/UHF - probably not a lot -- the UHF may have a slightly less loss.

3.) What kind of cabling should I be looking at considering the bands i'll be using? 4.) What tips do you all
> have as far as running the power and antenna cables?

Use as large a coax as you can if you intend to run power -- check coax power ratings at URL:
http://www.cablexperts.com/cfdocs/tech_data.cfm
Since the mobile runs are very short, cable attenuation is very small. Again see the above URL: where you will note cable loss is dB/100 feet.

>
> If there are great websites that you all have found that you could pass my
> way are greatly appreciated.
>
Maybe visit a local Ham Store and check their books for Mobile -- but a lot of them are for HF mobile -- an entirely different ball game. And the Ham Store guys are very savvy on FM mobile operation -- be sure to talk with them.

Good Luck.
Remember I'm just guessin

Don't worry about going SSB on 2M and 70CM Starting out. I Have the D700 and it's an EXCELLENT Radio. It will do everything you need it to do, as a new HAM. I've been on VHF/UHF for 10 years and have yet to worry about SSB on VHF/UHF. Get your feet wet, and decide after that what way you wish to go. Most people use the 6M Band for VHF DX Anyways.

Get the D700, you won't be disapointed. Great radio, lots of features, APRS is a Blast, and you'll be able to hit LOTS of Local repeaters, unless you are in the boonies.

good luck.

PA-SitRep (Pennsylvania Situation Report) is developing a group of PA-SitRep Contacts, most of whom (51) are Amateur Radio Operators. We are currently seeking additional Amateur Radio volunteers. Here is our current list of PA-SitRep Contacts (the lists are divided by Western, Central and Eastern PA Regions):

http://www.pa-sitrep.com/contact.htm

PA-SitRep Contacts are asked to monitor emergency situations from their local areas and post emergency situation reports to the PA-SitRep Discussion e-mail list which is used, in part, for monitoring developing emergency situations. If warranted, PA-SitRep Administrators move the emergency situation reports to our main emergency alert PA-SitRep list where the alert is distributed to over 600 subscribers throughout the state of Pennsylvania.

Our ultimate goal with PA-SitRep is to build a significant enough network of Contacts throughout Pennsylvania in order to provide timely and accurate Emergency Situation Reports, free of charge, to those subscribed to our emergency alert e-mail distribution lists and any other interested groups or agencies - much in the same way that SKYWARN provides weather situation reports for the National Weather Service.

If you're interested in volunteering as a PA-SitRep, please visit the website to learn more:
http://www.pa-sitrep.com

If you like the sound of these, you might try the modern EV RE-16, with
a transformer to step the impedance up.

But even an SM-57 with transformer will probably make you very happy.

PA-SitRep does not report local/minor police incidents. The purpose of the list is to alert the participants of MAJOR emergency situations that would be of interest to the residents of Pennsylvania.

Thank God it's still legal for us to do that.

Tony,

Adding more elements seems like the only practical solution. You would probably have to add 6 -8 feet to the boom, and 2 more elements. Keep in mind the longest element will be about 38 feet long. That is why they make the 18 -30 MHz version. BTW, Tennadyne used to make an 18 -30, but I don't see that listed on their web site any more. You might want to check them out anyhow for any ideas.

Tam/WB2TT

Dear hams without manuals,

Available to donwload, the FT-840 manual plus *schematics* at:

http://www.pt2rod.qsl.br/hamradio/FT-840 (beware: big files!)

And, VX1-R manual and other stuffs at:

http://www.pt2rod.qsl.br/hamradio/VX1-R

Have fun! ;)

Hi,

I am looking for a supplier who can sell BH1417 in small quantity (<
10). Can someone help. Future-active does not sell less than 2000.
It's an FM stereo transmitter on a chip.

Also, is there any other alternative of BH1417 ?

Regards,
Yusuf

Hi:
I am looking for a manual and schematic for the Icom BC-79 charger. Also tried the Icom archives and only found references to the unit.
Can be scanned into PDF.

Agreeable to provide reasonable compensation.

TNX
Ken, wb4zoh

Why are hams pathetic, anti-social losers?

Just go to any hamfest and you will see mostly overweight males that dress funny, talk in weird jargon.

Look at Field Day. Lets search the bands. I got a QSO, lets log that in, perhaps give a signal report. Lets search for more QSOs. That contesting was so boring.

Those weird hams talking about weird amateur radio politics. Debating whether computer mode is "real" ham radio. Wearing shirts that say "without CW, its just CB".

Field day goes on through Saturday night. Hams that have nothing better to do than to operate radios on Saturday night. And hamfests go through Saturday night. What do they have there at night?, A rock concert, a dance? No, a Wouff Hong ceremony.

They'll have a radio setup there at Hamfests. Listen to 40m and you will hear hams operating on Saturday night. You can see some of them on ATV. Many hams will avoid going out, but they will be at their stations making random contacts.

Sadly, hams focus on contesting, not experimentation. So, its not even a technical hobby. Its just a bunch of pathetic old men contacting each other behind a microphone, but not meeting people in real life.

> Also, is there any other alternative of BH1417 ?

The BH1416 I believe might be similar but may not have all the same

features. You might find more info on alt.radio.pirate and at this
URL: http://members.tripod.com/~transmitters/
When you read the article, it mentions the New Japan Radio NJM2035
chip, which isn't a transmitter, since there is no RF oscillator, it's
just a stereo encoder. But it's simple to make an RF osc out of a few
transistors.

Very little you wrote here has any basis in fact.

Here are some facts - not assumptions

According to the U.S. Surgeon General, 61 percent of American adults are overweight or obese. So much for Hams are fat -- so are a lot of others.
The average American spends four hours a day watching television. That adds up to more than one day every week, two months every year, and nine solid years by age 65, that Americans spend glued to the tube. So much for

American leisure "Quality" time

All venues are full of jargon -- music, plumbing, truckers, law, medicine, bowling, Sports, et. al. -- guess you hate them too.

The rest of your spewing is all prejudice, Ham Hate and assumptions.

Learn how to debate and make a believable argument -- see How To Debate URL:

http://www.truthtree.com/debates.shtml

Pay particular atention to this one: Avoid argumentum ad hominem. Personal attacks on your opponent are an admission of intellectual bankruptcy. Your opponent in this case was Hams and you are here by in Chapter 11.

RF -- you need to take a good hard look at yourself

Why do you hate Hams ?

Why do you hate Fat People ?

Why do you hate people who spend their leisure time different than yours ?

Why do you hate people who use terms you don't understand ?

Why do you hate people who dress different than you do ?

Why do you hate hams who compete in contesting ?

Do you hate anyone who competes in something other than your narrow world ?

Why do you even bother with Amateur Radio if you hate it so much ?

Answer here __________

Clue: I am a H___ Monger

Stupidity Follows:

The attraction of the BH1416/BH1417 is that they have on-chip frequency
synthesizers PLL'ed to a crystal (or a resonator) along with all the
other parts you'd want in a FM transmitter (including emphasis network).
That's a big step up from the usual LC-oscillator-that-if-you-
put-your-hand-near-it-it-shifts-frequency oscillator.

Probably the only way to get your hands on a BH1416 or BH1417 is to buy
a commercial product that uses one and desolder it!

Motorola sells some PLL's (like the MC145170) that are much more readily
available (you can buy them from Digi-Key in small quantities)
and commonly used in hobbyist FM transmitters. You can even buy

them with a keyboard-to-microcontroller interface and PC board, e.g.

  http://www.dckits.com/

I haven't bought anything from dckits, but their experimenter packages
look attractive.

Tim.

> "Nosko S." wrote:

>

> This is RF and signals see transmission line structure and not wires.

I'm not getting what your point is here. I think you are saying first, that the common mode signal you want to send is RF. Therefore, we are indeed discussing my first situation -- namely the possibility of symultaneous differential mode and common mode transmission lines in a single structure.

RE: "not wires"
The transmision line we are discussing in this case *is* composed of wires, so that *is* what there is to "see". Placement of "wires" or if you prefer "conductors" in a regular configuration produces a structure capable of supporting RF waves and exhibiting wave-like behavior and we call these things "transmission lines".

> Unless the return path for the common mode signal actually is the
> virtual groundplane then it would have to use a third conductor and
> a third conductor at any finite distance from the two wire transmission
> line will create a transmission line type structure between the third
> conductor and the two wires of the transmission line.

Here we start to get a bit sticky, as you will see, as I develop the concept of the common mode transmission line, but you are saying what I previously said.

However, the "virtual groundplane" only exists for the differental signal. It is non existent for the common mode signal so the following makes no sense:

"...the return path for the common mode signal actually
is the virtual groundplane "

Ignore the virtual groundplane in discussions of the common mode of transmission.

The rest of this paragraph is what I had said "...a third conductor at any finite ...will create a transmission line..."

> No the transmission line is being used at RF and seen by both common and
> differential mode signals as a transmission line and not a piece of wire.

I'll take this as further confirmation that the common mode signal is indeed RF and you are trying to determine if a common mode transmissin line is possible here. I say yes -- by adding another "side" to the structure which will act as the "ground" part for the common mode transmission line. It only needs to be another, excuse my choice wire, but it is easy to visualize a third wire along with the twin-lead. This would make it "Tri-Lead". In fact the third wire could be the "hot" side and the two wires of the twin-lead could act as the "ground" side. In reality, this would amount to another quasi-balanced transmission. Pictures might help, but I'm not going to attempt it.

If on the other hand, we were to put a shield all around the twin-lead's two conductors (Which, BTW does exist) The new un-balanced transmission line would more resemble coax than a balanced line -- except that the common mode "center conductor" would consist of two parallel conductors.

Does that help any???

>Very little you wrote here has any basis in fact.

Mostly firsthand experience, which can be just as useful. Without demographic
data, facts are not establised. Some measures (eg overweight) are somewhat
subjective.

Mostly male is a fact. Proabably 95+% of hams are male. Older is generally
agreed on, although I have seen some young people - usually children of hams.

>So much for Hams are fat -- so are a lot of others.

I've noticed more hams overweight than in the general population.

>All venues are full of jargon -- music, plumbing, truckers, law, medicine,

>bowling, Sports, et. al. -- guess you hate them too.

Hams use jargon when they don't need to. Like ending face to face meetings by saying "73".

>The rest of your spewing is all prejudice, Ham Hate and assumptions.

No, its firsthand experience. I tried to find what I was looking for - a technical hobby. I tried to find the exceptions. I have been to 4+ clubs, several hamfests. The exceptions don't seem to be happening.

I would like to invite a newcomer to a hamfest and see what this person's opinion is.

I don't hate ham or fat people, but how does that help me?

>Why do you hate people who spend their leisure time different than yours ?

Because there's no NEED for that. Its just that it seems that amateur radio brings in the anti social people into the hobby.

>Why do you hate hams who compete in contesting ?

I don't hate those that enjoy contesting. Problem is that contesting is boring to me and that few enjoy the other potential aspects which I find interesting.

>Why do you even bother with Amateur Radio if you hate it so much ?

I initially was introduce to a Hamfest through a co-worker. At my first hamfest, I noticed right away that it was mostly male.

Believing it was a technical hobby, I looked for those that shared my interests. I learned that most hams are interested in operating, contesting, antennas, and CW. I tried several ham clubs. Seems like hams don't want to do the other potential aspects such as homebrewing, troubleshooting, direction finding, APRS.

>First poster -- are you not contacting others behind a keyboard, but not
>meeting people in real life.

No, I meet people in real life. The thing is hams avoid meeting people and stick to their radios, even at ham gatherings at other locations.

Ah now we are past all the attacks on Hams , maybe now we can get at the heart of the matter.

You need to find the technically oriented hams in your area. Maybe clubs, elmers, or a repeater. And believe me the ranks are filled with many engineers, technicians and folks who work in the electronics industry and are in pursuit of the technical aspects of the hobby.

Here in San Diego, we have the following:

A microwave net on 2M - once a week and a meeting once a month, they design, build and experiment with microwave techniques and go on mountaintops to test their equipment. The club owns quite a bit of older but expensive microwave test equipment and at meetings frequently discuss, calibrate and evaluate their new designs.

This group built a laser light transmitter and receiver -- modulated it and sent signals several miles across mountain tops.

A 3 week course (free) to non-technical hams where they build small QRP rigs from scratch. Also technical classes for upgrading licenses.

A ham help net held once a week on 2M where new or experienced Hams can get answers to technical questions and frequently have invites to go to someone's shack to measure antenna SWR, set deviation, circuit testing or repair, etc. This covers the gamut of DC problems to HF, VHF, Vacuum Tube stuff, antennas, circuits, batteries, computers et al.

I personally have helped dozens of new comers with everything from how to solder to aligning and repairing their equipment, called elmering and we have hundreds here who are ready and do elmering.

We have an antenna shootout once a year -- testing rubber ducks, homebrew antennas, etc.

We have periodic T-Hunts where one can learn how to DF a signal including building the equipment.

At field day -- not only do we contest, but we demo -- satellites, PSK31, RTTY, Microwave TV, APRS, QRP, Stealth Antennas, solar power, balloon antennas and more.

Our repeater is full of tech talk -- what is deviation on an FM signal -- what is bandwidth (not the same), what are these goofy number things in the solar report --- SFI, A, and K index. What is class B tube operation, what is noise figure, what is modulation index, how does an op amp work, how to design strip line, antenna gain -- --- on and on -- just a sample of what I heard in a week.

A local here has solved the problem of talking up the state on 6M (50 MHz) (just below channel 2 TV) and has 6 rhombic antennas - a Kilowatt and knows when he can use tropo to get signals several hundred miles away without LOS or ground wave or F or Es skip ! That's hi tech stuff as he has designed his own low noise receivers to achieve this.

Now the point is it makes no difference that the above activities are male female, young or old, fat or skinny, dress funny or in suits -- and in California suits are funny dress. We have a youth group net every week -- none over 18.

High school students here contacted the space shuttle and had to set up and understand the configuration and protocol.

At our picnics several times a year, folks there are as sociable as any
other folks who get together, same at club meetings.

Our club meetings frequently have a tech topic speaker, noise abatement, how
repeaters work, receiver specs demystified -- what's dynamic range?,
Frequency modulation vs SSB, building a poor mans spectrum analyzer, SSTV
using your home computer, SWR simplified, and on and on.

Seek and ye shall find -- or move to San Diego or Silicon Valley, CA

Get past all that stereotyping and build a project and ask on the repeaters
for ideas ansd advice.

Good luck

Oh one more thing as Columbo would say --- There is just one more thing ---
Many of those old, fat, sweaty, funny dressed hams -- helped put man on the
moon, fought the nations wars, helped outdo the rest of the world as the top
producer of technology, helped biomed give us the best in medical
technology -- indeed sme hams are CEO.s of hi tech companies. Tom Brokaw
called them - The Greatest Generation (I agree) You will have a tough act to
follow that generation -- hope you are up to it.

I have started a new Amateur Radio list. It will deal with the legal issues
that are currently challenging our hobby. The Amateur Radio Legal Issues List
was created for the dissemination and discussion of any and all local, state
and federal legal issues that are now facing, or will face, Amateur Radio.

I am not a lawyer, nor am I in the legal field. I have created this list
merely as a forum for discussion.

If you are interested in subscribing, please send a blank email to
<arli-subscribe@topica.com>.

73,
N0JAA

Here is an update on the 5th IARU Region 3 ARDF Championships.

For the uninitiated, ARDF is an Amateur Radio Direction Finding contest and is similar in many
ways to Orienteering - except that the control points are not marked on the map - they must be found using portable radio direction finding equipment.
Everything else is the same - map reading and compasses are essential, as is the means of strategy of getting to the controls as quickly as possible.
Even though it started as an amateur radio activity, you don't need to be an amateur to participate as you won't be transmitting. ARDF is active in many countries around the world.
For more on ARDF, see the web site: http://www.ardf.org.au

The IARU Region 3 (International Amateur Radio Union - Asia-Pacific region)
is

holding it's Amateur Radio Direction Finding Championships this year in Australia around the city of Ballarat, a large provincial city in the state of
Victoria.

The event runs from Friday 28 November 2003 to Wednesday 3 December 2003.

The Victorian ARDF Group, which is organising the event, is expecting up to 100 participants from member societies in IARU Region 3 including Japan, Korea, China, New Zealand, and Australia.
Guest competitors from other IARU Regions are also invited to attend in the world-wide Friendship categories.
The championships are hosted by the Wireless Institute of Australia (WIA), with the WIA Victorian Division sponsoring this important event.

Full details of the event including competitor and volunteer registrations can be found at:
http://www.ardf.org.au

Please register early as alternative accommodation will be limited due to another large national sporting event held at this time.

The proposed program in 2003 is:
Friday 28th November: Arrival Day
Saturday 29th November: Equipment Check & Opening Ceremony
Sunday 30th November: 2m ARDF Competition
Monday 1st December: Tour Day
Tuesday 2nd December: 80m ARDF Competition &
Award Presentations & Closing Banquet
Wednesday 3rd December: Departure Day

Ballarat is a historic gold mining town in North Western Victoria, but is only about 1.5 hours travelling time from Melbourne Airport.
Transport will be provided from Melbourne Airport to the Mt. Helen Victoria University Campus which is the event centre and accommodation.

A special event amateur radio station will be available for use by our visitors.

Competitors may enter the official Region 3 competition or the world-wide Friendship categories.
Team results will only apply for Region 3 competitors.

A and B teams (2 teams of up to 3) will be allowed in any age/sex category (over and above this further Region 3 competitors may be allowed in the friendship only category if there are vacancies).

VFOs built by the average FM Tx fiend are not stable because they are not properly built. With the proper construction and design, their stability is comparable to an FM receiver.

> Probably the only way to get your hands on a BH1416 or BH1417 is to buy
> a commercial product that uses one and desolder it!

I found these pics of a Tx using the BH1417, at this URL

http://www.xie-gang.com/fm.htm

I enlarged the PC bd and found the URL for the company that apparently makes the PC board. I found some Txes at the following URL, but because the English is "less than optimal", (a lot less), I'm not sure what they do or which is which. Just go to the main products page and check out the others, and see if you can muddle thru and find a kit.

http://www.texin.net/c-c2ac2b-e.htm

I found another project or kit using the BH14xx. I'm not sure which, because I couldn't find it in the English version.

```

Hello all,
I'm new to the group and to amateur radio... I've been a ham for a year now and just got my general ticket two weeks ago (now I get cw privileges, heh)... Anyway, I got licensed not so much to be an operator but as an excuse to spend some time building fun electronic junk... and to play some with CW which i've been doing for the last month or so... (I suspect the   "RFbusiness" from a few messages back is laughing by now).

Anyhow, some friends (IEEE-ham folk from UCSC) and I are looking to build a repeater... We're starting with the controller and I was wondering what the interface to the radios might be like. I don't exactly want to hack up my HT... can I buy something that's "repeater ready"? Any pointers would be great.

By the way, great to find this group...

Eric- welcome and congrads on the upgrade.

May be some info for you at URL:
http://ac6v.com/repeaters.htm#build
Several sites to explore.

Otherwise contact a nearby repeater club and ask who is the technical guru.
Most will be happy to yak about it.
Nearby repeaters can be found at URL:
http://ac6v.com/repeaters.htm

Be aware that repeater frequencies are coordinated -- your area coordinator
is probably TASMA -- URL:
http://www.tasma.org/

Humor of the day "A parrot repeats, FM repeaters translate (in and out
freqs)"

Hello Andre--

Sorry, I do not know of that movie.

There was another ham-related movie that was released around 1947 titled _The House on 92nd Street_ (hard to find these days). An interesting thing about it is that they presuppose radio knowledge on the part of the viewers that the typical viewer would not have--

--a NAZI spy ring delivers secrets to a ham on Long Island, and they believe that he is transmitting them to Germany. Actually, he's an American agent and he transmits them to another American agent, also on Long Island. (No mention is made of what frequencies are used.)

Leading to the climax of the movie, the NAZIs are starting to be suspicious, and they bring a radio expert to the house on Long Island. He looks at the transmitter and exclaims
"Look at that coil-- It is for 2 1/2 meters!!"
And thus they know that the transmissions are not reaching Germany. No explanation is given to the general public.

(There was a ham band at 2 1/2 meters (112 MHz) prior to the allocations for television signals in the spectrum.)

Is a two conductor transmission line such as the 300 ohm parallel flat type cable used for VHF antennas being used to convey a differential mode signal that is at a large (approximated as infinite) distance from a groundplane capable of conveying a common mode signal as well ? A common mode signal can only be conveyed if one or both of the current carrying conductors is in proximity to a grounded structure. A two conductor transmission line conveying a differential mode signal has a virtual groundplane between its two conductors but does a common mode signal view this virtual groundplane in the same way as it views a real groundplane and travels along the transmission line or is it suppressed from the lack of a real groundplane ?

I have been looking at the Heathkit hw-101, the atlas 210x, and various alinco mobiles. My main concern is cost. I only have 250-300 to spend on this unit. I am obviously not particular about type. Is it cheaper to get a mobile and use it as a transceiver or just get an old base station and use that? I am really quite interested in the old analog dial types. Any suggestions? CW is a must.

Thanks

I have no experience with the HW-101, but I have kept my 210X for many years because it is a very good radio that I can use as a back-up incase my present transceiver gets sick.

There is a console unit with power supply and VOX circuit built by Atlas for use as a base station. There is also an external VFO unit, also made by Atlas, with a digital frequency display. This unit makes it possible to work split. The frequency counter that drives the display can also be used as a test instrument if necessary.

The down side is that this radio does not cover the WARC bands, and it has limited coverage in the 10 meter band. Going purely from my tired old memory, I think that it only covers about 200 kHz. on 10 meters but you can diddle the local oscillator, using the counter in the external VFO, and set it to cover any 200 kHz. segment of your choice.

I hope this will be of some help.

73, Steve

Please answer one question - if, as you claim, you are a manager why do you get involved in the sharp end? Alternatively if you are an engineer, do you have some aversion to reading up on these subjects?

I believe what you are asking about is similar to the "phantom" circuits that used to be used in line communications.

Because I am the team leader and the technical expert at the same time. I
work for an organisation that allows engineers to take management positions
rather than relies on humanities types.

> Alternatively if you are an
> engineer, do you have some aversion to reading up on these subjects?

Information on differential mode circuits at RF frequencies is very sketchy
and thinly spread across lots of publications. Differential mode is normally
used for data communications or audio. There isn't even a standard
characteristic impedance for differential mode circuits at RF let alone any
specifically designed cables or connectors.

> I believe what you are asking about is similar to the "phantom"
> circuits that used to be used in line communications.

Telephone local loops operate in differential mode but are at audio
frequencies.

Hi,
I'm a new general ticket holder.
This weekend I bought a book entitled "Hello World, A Life in Ham Radio" by Gregory and Sahre. (Princeton Architectural Press, 2003).
It is primarily about a ham named Jerry Powell. Although to book is very elementary, I really enjoyed it--especially looking at the QSL's in color.
The book may have already been mentioned in this group.

you may want to post this one on one of the ham radio ng's

I believe that yes it can carry a common mode signal
and that that is usually undesirable and that it
is usually suppressed with a balun.

Yes.

>A
>common mode signal can only be conveyed if one or both of the current
>carrying conductors is in proximity to a grounded structure.
No it doesn't need a grounded structure, just a continuous return
path for the return current.  A grounded structure can serve
that purpose, but so can other things.  Continuity of the return
current pathway is the key.  (For AC signals, continuity can
be achieved through capacitive coupling for part or all of the
return leg.)

>A two
>conductor transmission line conveying a differential mode signal has a
>virtual groundplane between its two conductors
Yes.

>but does a common mode
>signal view this virtual groundplane in the same way as it views a real
>groundplane
No.  Differential mode virtual groundplanes will not serve as current
returns for common mode signals.  A "virtual" anything is an imaginary
construct used to simplify the physics or the math (or both) for a specific
set of conditions (boundary conditions, signal forms and symmetries &c).
The symmetry plane of the differential signals on the balanced wiring
has no such mathematically necessary relation to common mode signals,
and cannot be used as a simplifying model element when dealing
with common mode or any mode other than balanced differential.

Thank you for all the responses. You guys are most helpful. Here is my next step. There is the BRATS hamfest in Maryland that I will be going to at the end of the month. It will be my first fest. I'm rolling out of here at 2:00am to get there when tailgate sales begin. Are the products pretty good from hamfests in general. The radios I have my eyes on are the ts-520, ft-101, ten tec 555(not sure but if the price is right why not), and still the atlas 210x. What do i need to look for to keep from getting suckered. Hams are a pretty honest bunch from what I have learned, but I still do not want to be taken for a ride. I do have some electrical experience(avionics in the Navy).

Thanks
G. Doughty

Greg...when you arrive, see if the local club has a test table set up. If not, before you close a deal, insist that the rig be cranked up...lots of guys will have the items needed for that. Worst case, lug a dummy load and a known good wattmeter with you. Check each band, as some rigs are known for having bandswitch problems. If you don't have an antenna up yet or are using a wire, look for a good tuner, also.

I sold my Tempo One this way due to having it powered up...the new owner was able to see it work, albeit into a dummy load. BTW, if you see a CHEAP Tempo One and can't find another rig on your list, you might consider it...no WARC bands, but you might score one for less than $100. It is a Yaesu FT200.

Hope you get at good rig!!

Andrew

Nice work if you can get it - I've always avoided the cost account
side of being a manager, which seems to make up a significant part of
a manager's role in the bigger companies in Britain.

One bit of advice on hamfests: Timing.

Early on is when most of the good deals will happen. The other good
time is at the very end, when prices will drop on anything big and
heavy.

Happy trails,
Gary (net.yogi.bear)

*** The point of contention here is the word "proximity".

A) _IF_ you are talking about traveling waves along this "common mode" structure (And I assume you are) , then it will need a "near" return or "ground structure" to support the traveling wave as you surmise. A single wire over a ground plane will have a charactersitic impedance. The two conductors (with the same signal) can be thought of as a wider single conductor over a ground plane. This is a common transmission line structure and it is referred to as a "micro strip" and has been modeled and a characteristic impedance can be predicted (a flat strip, not two conductors).

So, you can send another RF signal along as a "common mode" signal if you provide a return conductor a controlled distance away -- such as a shield around the twin-lead. This would make it roughly equivalent to coax or perhaps a "stripline" also called "strip transmission line". The latter being a "center" conductor (usually flat) between two "close" ground planes. You'd have to match impedances as usual.

B) If, on the ther hand, you are talking about a low frequency/aka non-traveling wave, then any conducting return path will suffice. Like the old telegraph lines which had a single wite over ling distances between stations and used the earth as the return. So you can send power to a preamp that way or audio to a whatever also.

I'm not exactaly sure where Kevin is going with the 'capacitive coupling' idea.

>
> >A two
> >conductor transmission line conveying a differential mode signal has a

> and cannot be used as a simplifying model element when dealing
> with common mode or any mode other than balanced differential.

*** The differential mode "virtual ground plane" you refer to appears only for / to the differential signal. It is there because the differential signal is always "equal and opposite" and therefore there is a place equidistant from both conductors where there is no electrical field potential due to this signal.
NOTE the last four words of the last sentence. It is non-existent for the common mode signal. Maybe this is what Kevin said.

(I'd have to think about the magnetic field, but gut feel says it is also opposite & therefore has a virtual "magnetic plane")

Please don't start off on a tangent about G-line.

I was given a Tempo One. Along with 2 others for parts. It works with tube replacement, I borrowed a good one and swapped tubes one at a time till I got it working, So, I know which tubes are bad and those that are not. I was also given 2 other Tempo Ones for parts.

So, if you can trouble shoot and repair, You might want to ask at a local club meeting if someone has an older non-working radio to give away. Fixed It would make a good 2nd rig.

Just my opinion

Chuck

hi everyone.

i have never posted here before, or in any other radio-related newsgroup, but i figured now would be a good time to ask some questions about a field i am curious about for various reasons.

i hope you guys don't mind me posting to the rec.radio.amateur newsgroup, because it is partly about digital broadcasting...however i chose not to post to the rec.radio.amateur.digital newsgroup because my questions are mainly about general amature radio broadcasting.

now to the point.

basically my goal is long-range wireless-networking for a laptop. currently most if not all wireless networking is limited to about 100 meters from the receiver. i understand this limitation, but i would really like the ability to use a laptop with wireless-networking more than 100 meters away from my house.

what i really want is the ability to broadcast to about a mile or two away, or if im really lucky...10 or 20 miles--but i highly doubt that. my house is about a mile from some of the places i would routeinly use a laptop...my high school, the library, and the local coffee shop :)

i know of some of the ways to boost the typical wireless networking technologies...some legal, others not. but i would really prefer to stay within the bounds of the law.

what would i need to accomplish my goals, if it is at all possible. i have researched a little into this topic, but it doesnt seem to be too popular, which surprises me. microwave seemed good until i head about the costs. i cant afford a lot...perhaps 500$ (USA) at most to both send and recieve the signal. and if i heard right, microwave is line-of-sight, and i would really prefer omni-directional as most of the places i would use a laptop aren't located in a line. then i heard about shortwave, but i havn't heard that much about it. all i really know about shortwave is that it is used by many countries to broadcast radio around the planet. i hear that the broadcast works by the bouncing of the shorthwave signals in the atmosphere, but that without a high-power signal, reception is poor and spotty if your too far away from the broadcaster. other than those two technologies, i have little idea as to what i could possibly use.

if the method you guys suggest requires liscencing from the FCC or other organizations (i live in the USA -- Southern California) what are hte requirments/fees? will there be any tests i would need to pass, and how much is the fee? is it anually, one-time, etc?

if it isnt already obvious, im not very fluent in radio terminology or technology. my strenth is in computers.

i appriciate your time, and thank you in advance for any replies to this thread of mine.

thanks,

farrell farahbod

for a range of 10 - 20 miles you'd need a transmitter capable of at *least*
several watts... this would definately require a license .

Since regs don't permit greater power in that band
on those devices. You are left with directional antennas
on both sides. With a yage and direct line of site a mile
should be mo problem.

Note that this question is addressed in the last couple of issues of QST magazine. Here are the issues to consider:

1) Probably a show-stopper: it is illegal to use your Amateur Radio license for any commercial purpose whatever. That includes ordering books from Amazon.com, sending work-related emails, and possibly even forwarding banner ads to your laptop.

2) Some of the 802.11b frequencies are inside the license privileges of a ham, and can theoretically be used at higher power levels by hams.

3) Radiation exposure limits probably confine you to a few watts, if the antenna is near your body. Since 801.11b uses direct-sequence spread spectrum, you are confined to a maximum of 100 watts under all circumstances.

4) Amateur transmissions must be identified. The usual approach suggested is to make the network ESSID be your call sign. This limits you from talking to normal APs with different network IDs.

Your first best plan is to look at antennas, but that isn't likely to give you a mile. The Orinoco Gold card, and some others, have an external antenna jack, and you can experiment with beam antennas, AFAIK without any legal implications. That's what I'd do first.

> my house is about a mile from some of the places i would routeinly use
> a laptop...my high school, the library, and the local coffee shop :)

School: Get an access point and a DSL router, and set them up somewhere on your school's LAN. Much easier than beaming a signal to home.

Libary: Offer to provide wireless as a free service, and put an AP and router on their LAN, too. (In fact, this gives me an idea.)

Do the same at your parents' and in-laws' houses, but first get them to go with broadband.

Regards,
Len.

That was what I was tyring to say, in different words. Maybe between your explanation and mine the OP can get it.   I think your version is probably clearer on the EE stuff, I was trained as a theoretical mathematician first and then went into EE and I was replying more in math terms, which is probably less useful for most people.

Kevin

I'm probably not alone in thinking that it is ironic that this top-posting, unsnipped-quoting, telling-people-to-fsck-off troll is ranting about courtesy.

I know, Don't feed the trolls. I should know better.

The limiting case is when the return conductor is the universe. This is called a "G-line". Imagine a coax that gradually widens, like a funnel, until the center-shield separation is so large that it's essentially infinite, and the signal travels along a single wire in free space. A funnel on each end makes a smooth transition from coax into/out of a single-wire G-line.

Here's Ralph's:

> ... line-of-sight,

Now this will sound a bit strange, but there are several methods of communicating up to about 1 mile WITHOUT a licence. Radio Amateurs will try to tell you that you HAVE to get a licence to transmit. This is not so (and I am a radio ham!). Some methods below are omni-directional, but remember that most antennas are not omnidirectional. The only omnidirection antenna I know of is an "Isotropic" antenna, and that is entirely fictional, just like the square-root of -1, Father Christmas and DXing via a VHF repeater.

1 - Hammer two copper posts in the ground. Attach a wire to each and connect to them the output of an amplifier. Connect a modem tot he input of the amplifier. You will need to set the modem to "leased line" operation so it doesn't look for a dialling tone. The receiver station, 1 mile away, is two copper posts hammered intot he ground and connected to a small-signal amplifier input. The output of the amplifier is the input of the second modem. You should easily get 1-mile if both have the rods about 10 meters apart.

Disadvantages - It doesn't work too well in the dessert (I have tried it just outside Jeddah on the old Makkah road). It is not too brilliant in well built-up areas since you also pick up a load of mains hum. It may not be a problem for a modem, but it sounds bad on the ears. A filter?

Advantage - it DOES work well underground, if you can fid a place to hammer the electrodes. When experimenting in "Swildens Hole" in the Mendips there was a river following the cave (a stream, actually, but it seemed like a river when 1/2-way up an electronladder and it's pounding down on your helmet) and the electrodes can just be dropped in the water. Most caves just have rock.

2 - Modulated Laser transmitter and photocell receiver in torch / headlamp reflector, but this is quite directional. The laser can be modulated quite rapidly by bouncing it (reflecting) from one of the side electrodes of a Quartz crystal. They are plated with copper and allow you to modulate up to several 10's of MHz. The laser only needs to be a low-power 5mW or so visible-light laser. I used a 2mW to get over 100 feet this way.

When I tried a 25mW laser I had the police round (Grunty Fen, Cambridgeshire, 1988 - G8TGL). They said I had "crossed communication routes", but I was shining the thing on Ely Cathedral clock face (3 miles away), so I suppose I deserved what I got. Incidentally, I used this method to make a 4' square oscilloscope - HiFi driving speaker cones with mirrors mounted on them. Beam projected down garden and reflected by by mirror. HiFi channels driven from Apple IIe computer.

Disadvantage - not exactly omni-directional, or anywhere near it.

3 - Modulated infra-red LEDs. Can be made about as amni-directional as a 2-ele Yagi and you can modulate with a whole radio spectrum, up to about 10MHz. This means that instead of antennas you can transmit using your own private radio spectrum. Great for teaching boyscouts and newbies to hamradio how to operate a transmitter or training morse code. Use ordinary commercial/homebrew receivers and QRP transmitters. You can even add a part of the radio spectrum as background noise by connecting an antenna to wideband amplifier and modulating another IR LED. This method is great since the only radiation is modulated light for which you do NOT need a licence.

Disadvantage - if you shine each LED on the ceiling you can cover a whole church-hall using, sensitive receivers (mine was FRDX400) and each LED transmitter is a bank of LEDs - but it is crap outdoors, since you cannot see IR so you cannot focus or point the beam.

4 - Magnetic induction - If this were in reality "radio" then Mahlon Loomis would have been the father of radio in 1868, NOT the spaghetti-basher Maccaroni in 1904orsomethinglikethat. Basically, if you pass a DC current through a wire, you get a momentary DC current induced in a parallel wire, since the two are coils (transformer principle).

In 1970 (RAF Locking, and Tern Hill) I listened to my HiFi whilst in the bath in an RAF barrack block. The distance from my room to the "ablutions" (millitary talk for bathroom) was about 150 feet. I took a 20-foot length of 10-pair telephone cable and cross-connected the ends so I had a 20-turn coil of wire about 6-foot in diameter. I connected the two ends to the two speaker terminals of my HiFi and the ground to the centre-tap.

The receiver for this was a TV Line-Output transformer ferrite core (they come in 2 halves) stuck (glued) end-to-end with a rod of ordinary MW aerial coil between. In effect I had a 18-inch long ferrite rod; the middle bit thin. I wound about 600 turns of wire on the middle bit and connected that to a transistor amplifier. Voilla! I heard my stereo (now in Mono). Perhaps you can connect this system to modems? Dunno about the range, I had a VERY strong signal, but I never tried to exploit the range above the required 150 feet.

Dissadvantage - In those days ordinary hearing aids used valves and had a magnetic microphone. The corpral on the floor below me was megga pissed-off since he did not like Jethro Tull and "Groovin With Mr Bloe", but he never found out it was me, thank God! Today there are other magnetic thingies around. You may have other problems, but I am sure that the old corpral from Turn Hill is now dead. He was an "old codger" over 30-years ago.

Finally,
5 - Broadband - Get yourself a broadband connection from your local ISP and connect to your home computer. You should know the IP number. You could even try putting all your info on a single hard disk and taking that around with you. But these simple solutions are often not the most impressive when showing-off to visitors.

http://w1.859.telia.com/~u85920178/

Very best regards from Harry -

Can anyone tell me the spec's of the wall charger (NC-26b), I sure
i've got a charger in my spares box that can do the job rather than
buying another ....

looking for the cheaper option

Thanks

Mike

 - So is the kindom of Saudi Arabia -

Hi David,
You would be surprised just how much hamradio gear is used outside hamradio. Here are a couple of secret (real-life spying) uses that no-one knows about. In Saudi Arabia, the royal families used to use the 145-146MHz band for private communications, and they used only simplex FM. The first equipments they used were Trio (Kenwood) 2200GX handbag portables. I know because there were 2 of them unused in my workshop when I left there in 1993.

To get a hamradio licence in the kingdom you have to pass a 2-part test:
1 - Open your wallet - Riyals > brain cells.
2 - Call the king "daddy".

Radio hams over there did not use the 2M band, that was totally secret, even though there is still a repeater on R6 in Bahrain (or is it Abu Dahbi?). The 2200GX is a bit big and clumsy and not encrypted, so they have now exchanged the gear for Ericsson NMT, then GSM telephones. They had bought a few encryption modules, but they werebased upon sideband inversion and I showed that an SSB receiver could resolve a NBFM signal enought to understand the speech.

One prince in Riyadh (there are over 2000 of them inthe kingdom) had a "royal fleet" of luxury vans that can communicate anywhere within the kingdom (supposedly). They could not get more than 1 mile when I was called in from my workshop. The vans also used the FT101ZD with the FM board fitted (not the AM board). They had been given the frequencies by a Egyptian "radio engineer", the same engineer who had screwed a vehicle panel-mounting screw through the coaxial feeder cable whilst fitting the radios in the prince's vans. They were also trying to use NBFM on 1.8MHz using a 1.5-metre vertical whip antenna on the back. I showed them how to use SSB and set them up on 27MHz by changing one of the 10M band crystals.

I was shown out of the princes pallace and not-so politely asked never to return, for two reasons:

1 - I described a roof-mounted 1/2-wave antenna using household power cable, for communication to the vans (alternative to a ground-level receiver helical antenna). The Egyptian engineer convinced the prince that my knowledge was sadly lacking: I had used INSULATED WIRE for the antenna, and any fool knows "you MUST use bare wire to make contact with the air."

2 - The prince had bought a suitcase spy recorder. It was an NMT decoder computer / radio / cassette recorder that could be used to "target" a specific mobile. It would follow and record all calls to/from that specific mobile. It would even follow when the mobile was handed over to another node, then continue recording. The prince wanted me to take this spy equipment back to the UK (as hand baggage, through customs inspections) and exchange at the supplier it for another one that worked on the Saudi 450MHz system instead of the 900MHz it was equipped for. I refused.

Incidentally, the prince was also using hamradio gear (30MHz - 1.1GHz general coverage receiver) to monitor general 450MHz analogue telephone traffic, as well as monitor his own security forces. So, if it were not for hamradio gear then a lot of the security / eavesdropping equipment available would not be possible.

All this is 100% true, but I doubt if it will be believed. I wouldn't, and I was the one there.

Oh yes, I beleive you. Ive been to Bahrain and seen wogs like this first
hand...an outrageous abuse of privilege and frankly, I'm amazed they still
get away with it. I'll be the first to chuckle when the oils runs dry and
they go back to their goats and camels. See how fast the white prostitutes
and beermeisters leave the fleabags then eh?!?

This is RF and signals see transmission line structure and not wires. Unless the return path for the common mode signal actually is the virtual groundplane then it would have to use a third conductor and a third conductor at any finite distance from the two wire transmission line will create a transmission line type structure between the third conductor and the two wires of the transmission line.

No the transmission line is being used at RF and seen by both common and
differential mode signals as a transmission line and not a piece of wire.

Thats what I was thinking. In theory the virtual groundplane can be at a
completely different potential to that of a real groundplane.

>
> (I'd have to think about the magnetic field, but gut feel says it is also
> opposite & therefore has a virtual "magnetic plane")

Assume there are no magnetic materials in close proximity to the transmission
line so that the problem can be looked at in terms of its electric fields.

> What kinda of amp and what are you connecting to the amp ? What kind of
> modem ? I can understand the principle of this but what equipment are we
> talking about? Might seem dumb but had to ask!

Not at all a dumb question, only politicians ald solicitors ask dumb questions.
HiFi amplifier, perhaps around 50 watts RMS is about right for one or two miles.
The modem would be an ordinary old-fashioned modem that is connected between a computer serial port and a telephone line. In days of old, people used to connect to bulitinboards (BBS) via a modem and anyonecould have a BBS by just connecting a moden between the telephone line and computer, then running BBS software. A bit like a packet repeater. Most modems had several modes, such as "leased line". This facility allowed two modems to have a permanent and dedicated landline betweent he two, for example a multichannel (perhaps 960+)telephone MUX link. These lines have just 600 Ohm audio + E&M signalling. The "modern" 56K PC internal modem may not be suitable, but a 9K6 or 28K external modem (using todays terminology) would be fine. Even a "Baycom" modem or "Hammcom interface" would work, if the right software were available to drive it.

> Is there such a thing as a reciver station for bi-directional
communication
> ?! Again i don't understand the term of 'modem' here.

Modem is short for MODulator / dEModulator and it is nothing more than a data / audio interface for connecting together the serial ports of two computers. Serial data -to- audio tones -to- serial data. With this you can connect two computers together in such a manner that communications software can be used to share services between them, for example:
- slow (modified) LAN connection
- FX (DOS based) file transfer software
- Laplink (Windoze based) file transfer software

That which I first used was written in GW-Basic and took me about 40 minutes to work out the code. Gave me a "DOS" window tot he distant computer.

Hope that this helps. BR MOTUASROALB (Alias Harry)

> PSTN uses a single twisted pair, how can you seperate I/O from these? I'd
> like to give it a go.

Use two split-secondary transformers. In that way you can build a "Hybrid" to isolate TX from RX. Besides that, when I first experimented with this the modem I used was a "MyCom" (Jap pirate copy from the ME) that used 300 bauds. The TX and RX FSK tones were different so a little breakthrough was acceptable.

My experiments using 9K6 and 28K modems only used a "field telephone line" so the problems were somewhat fewer. I presented the idea, if you want to try it then you can grab the ball and run with it. I don't intend to do any more experiments with this, but I and I am sure many others, would be interested inthe results of your experiments.

Ok, so this thread has now become a discussion about the meaning of the
prefix "OMNI". So if God is only OMNI-potent and OMNI-present, then in which
planes does she not have influence or presence?

Ok, I know my theory. According to the "official" definition, an
omni-directional radiates or receives equally in all directions in only one
azimuth. An isotropic antenna is a hypothetical antenna that radiates or
receives equally in all directions. Isotropic antennas do not exist in
reality but are meant to represent a convenient reference antenna for
expressing or comparing the directional properties of real-world antennas.
But you know exactly what I meant.

Probably a very valid comment, but I am having a little trouble trying to understand just what you actually mean. Could you try re-phrasing it, perhaps by adding a few words? You don't appear to have written any.

OK, if you don't like like those ideas about mobile phones,

1)   Modify a �25 pair of PMR transceivers, should do 3km.

or

2)   Buy a pair of ISM transceiver IC's, e.g Chipcon, I got about

400m at minimum power (0dBm) cost about �8, or look into low power
radio solutions 433MHz modules.

Simon

Yeh! and another little point of interest, in the popular TV series "Z-Cars" the little Pye PF1 was both transmitter AND receiver. But I suspect that was just pretend, too, just the same as in the later episodes of "Dixon Of Dock Green."

Incidentally, did you know that the Pye PF1 was one of the biggest single sources of accidents among the bobby on the beat? When you pushed the PTT switch, the aerial rod shot out. Quite a number of bobbies got the aerial up the nose and some even lost the little plastic bit up there. Nasty!

BR Harry

I asked a question about the decibel a few threads back, how can the power be 0dBm, where 0 is a reference to what power level ?

Notice the "m" after "dB". It's a standard unit referenced to 1mW (to which
the "m" refers). 0dBm is simply 1mW.

Hi,
I am a newbie with a two week old general ticket.
What, in your opinion, is the best logging software?
Thanks,
Paul Armes
KD5LAR

Take a look at DXKeeper, a member of the DXLab Suite. You'll find reviews of DXKeeper at http://www.eham.net/reviews/detail/2215, and reviews of the full DXLab Suite at http://www.eham.net/reviews/detail/3139 and http://www.eham.net/reviews/detail/2210 . On DXZone, DXKeeper's rating is 8.32 based on 85 votes (on a scale from 1 to 10, with 10 being best) .

Like all DXLab applications, DXKeeper is free, and available via http://www.qsl.net/dxlab/ .

73,

Dave, AA6YQ

Looks like he means that the antenna isn't made for 220mhz, plain and simple.
There may be a quad band antenna that would work, however, I would question if
it would be wise to use 220 mhz on a modified HT if it wasn't designed to be
used on 220 mhz.

I live in a flat-roof house with a straight eave of sufficient length to accommodate a 40m dipole antenna. I am considering installing the antenna under the eave which is roughly 10' above ground level. Will this work?

Sure.... just expect it to be a bit touchier to tune and less effective.
You'll still make plenty of QSO's all around the country. I once used a
below-ground antenna... and could work almost all of the US with it. It was
just an end-fed piece of random legnth wire strung around the basement walls,
hanging from nails in the sill-plate. It sufficed until I had time to get
something better up.

These things will have to be recharged every couple days to work, so,
once the criminals figure that out, they become useless.

I suppose it could be configured with a low-battery warning so that
the police are sent out before they are fully discharged, but that
will tie up manpower that could be spent locking up fresh criminals.

My opinion is that if someone is dangerous enough that we have to
slice them open and stick a device the size of a can of Skol in them,
then they should be caged. Your idea is like putting someone in a cell
and giving them the key. When they want "out" - just "forget" to use
the recharger.

To get a signal out, or to be inductively charged,
the device would have to be close to the skin.
So, it could be removed easily and put on
a dog collar, or something.  Also, it would be
easy for the wearer (child, pet, or whatever)
to go somewhere that wouldn't allow a transmission
out to be received: A shed or well-constructed car
might have too much metal in line-of-sight of
the receiver, for example.   Swimming in salt water.

I think the cancer or infection risk would be too
high for them to be used in humans--wearing a
bracelet or something would be a lot safer.

In addition, the RF itself might be harmful,
depending on transmission parameters.  Transmission
below about 50 MHz probably would be advisable,
for a variety of reasons.

The press release I saw about a month ago described a device that was passive. It required being in the proximity of a receiver as in using "smart tags" for clothing. With a bit of adapting the smart tag principle should be capable of working out to a couple hundred yards

If it is active then think of pacemakers. They run for years before needing a recharge. OTOH they are very light on the duty cycle.

The cellphone/gps devices work similar to the WAAS for aircraft approaches(if they ever get it activated). They can locate a phone within a few feet using the cell phone base/repeater tower as the equivalent of the WAAS station.

GPS by itself is no where near that accurate even with the dithering turned off although it's actually good enough to use for virtually any approach except an ILS which uses vertical nav as well.

Good enough? Yes. Legal? No.

Amateur Radio Newsline™ Report 1349 – June 20, 2003

Amateur Radio Newsline report number 1349 with a release date of Friday, June 20th 2003 to follow in 5-4-3-2-1.

The following is a Q-S-T. A petition to end High Fidelity S-S-B transmissions is filed with the F-C-C, severe interference knocks out ham satellite operations ion Perth Australia and an update on W-R-C 2003. All this and more on Amateur Radio Newsline report number 1349 coming your way right now.

RADIO LAW: HAMS PETITION TO OUTLAW HI-FI SSB

On-air experimentation with so-called High Fidelity or Enhanced Single Sideband transmissions could be outlawed if thr FCC adopts a proposed rules change requested by two radio amateurs on opposite sides of the country. Amateur Radio Newsline’s Paul Courson, WA3VJB, reports from the nations capital:

--

A petition for rulemaking was sent to the FCC and accepted by the agency May 27th. It was not immediately issued a Rulemaking Number so it was hard to find in the public record. However, Newsline has talked with two sources who have seen the proposal, and it calls for what many would consider severe bandwidth limitations on HF phone.

The petition asks for a federally mandated bandwidth limit of 2.8 kilohertz for SSB, well below the extended bandwidth needed for what has been called enhanced audio.

One of the two hams who submitted the petition told the FCC they are motivated by interference problems caused by two groups of single sideband operators. These groups are portrayed by the petitioners as, in both cases, having cast aside traditional voluntary limits on bandwidth of roughly three kilohertz. The petition therefore asks that these voluntary limits be made mandatory to provide a clear enforcement mechanism for regulators.

The petitioners, Michael Lonneke W0YR of Virginia, and Melvin Ladisky W6FDR of California, said hams from one of the groups come on during radio contests, and are found tweaking their transmitters to splatter purposely to provide elbowroom on a very crowded band. The two men characterize the other group as those who experiment with high-fidelity audio, apparently trying to replicate the sound of FM Broadcast stations.

Newsline has recently reported on advisory letters sent out by FCC Enforcement Counsel Riley Hollingsworth, K4ZDH, who wrote to several members of the enhanced SSB group telling them the agency had received interference complaints. The letters did not validate nor dispute the complaints, but warned the stations that if such complaints continued, the unresolved friction could trigger petitions for rulemaking. One such petition is now at hand.

A Newsline reporter spoke with Lonneke, who declined to provide a copy of his petition for this report. He said he and Ladisky hold the same views on the matter of excessive bandwidth causing interference, and that they teamed up on the petition to add strength to their call for regulatory intervention. Lonneke declined further comment, and said the petition will speak for itself if the FCC chooses to assign it a rulemaking number and put it to public comment.

Members of the enhanced SSB group have told Newsline they believe their experimentation with improved audio is totally in line with the spirit of ham radio, and thet when conducted under appropriate conditions, is every bit as justified in bandwidth consumption as any other spectrum-intensive activity, including contesting. But the FCC's Hollingsworth, reacting to such comments, disagreed, suggesting the mode of SSB was commissioned for the amateur service as a spectrum conservation mode, counter to the idea of high-fidelity audio and the bandwidth it requires.

Hollingsworth could not be reached to comment on the proposed Petition, and another FCC official declined to comment.

The petition also mentions the legacy mode of AM, and said it, quote, does not create the same problems that the burgeoning use of so-called 'Hi-Fi Single Sideband' creates. Nonetheless, the petition asks the FCC to impose a 5.6 kilohertz bandwith limitation on AM, with the restrictions asked for on all HF allocations below 28.8 megahertz.

Previous regulatory proposals based on bandwidth have failed, including Docket 20777 from the mid 1970s. The conclusion then was that having loosely-defined technical standards allowed the greatest range of experimentation in ham radio, as long as such signals are clean. Indeed, many present-day violations of splatter, overdriven amplifiers, and poorly administered audio lashups can already trigger enforcement action under existing FCC rules governing the purity of signal.

Reporting for Newsline, Paul Courson, WA3VJB, in Washington

--

As we go to air, the ten page petition by W0YR and W6FDR has not been been assigned a Rule Making number designation. More on this story in future amateur Radio Newsline reports. (ARNewsline™, W5YI)

**

ON THE AIR: PERTH HAMS JAMMED OFF 2.4 GHZ

A cloud of radio frequency interference has settled in on the 2 point 4 Gigahertz in the city of Perth Australia. For many hams it is making satellite operations impossible. Felix Scerri, VK4FUQ, reports from the city of Ingham – down under:

--

You may not hear many VK6 hams on AO40 for a while. Many are suffering from interference from some form of wide band data transmission centred on 2.4GHz. The signal covers much of the Perth metro area and is very strong. So strong in fact that it does not matter where you beam you can still hear it - mainly from reflections.

The signal, which runs continuously, sounds like a 100Hz buzzing sound and has a bandwidth of about MHz. Looking at the signal on a spectrum analyzer it has a flat top and very steep sides. The signal started about 6 weeks ago and one suggestion is that it might be an image response of S band down converters to the 2.1GHz G3 mobile phone service that have just started tests.

--

At airtime, the interference is still there and hams in Perth are wondering what to do to make the problem, go away. (Q-News)

**

WRC 2003: AN UPDATE

Radio regulators from around the world are still gathered in Geneva Switzerland trying to work out numerous spectrum issues including some dealing with Amateur Radio. Q-News Graham Kemp, VK4BB, is here with the latest:

--

The International Telecommunication Union's 2003 World Radiocommunication Conference got under way June 9th in Geneva Switzerland. Amateur Radio is only a small part of the conference which is trying to complete work on more than 40 agenda items.

Amateur Radio is but a small part of the conference, which is trying to complete work on more than 40 agenda items. Three are especially important to us: realignment of 7 MHz allocations (agenda item 1.23), revision of the regulations governing the amateur and amateur-satellite services (agenda item 1.7), and consideration of an allocation for satellite-borne synthetic aperture radars (SARs) in the 70-cm band (agenda item 1.38).

Two other agenda items that could potentially have a great impact are the drafting of an agenda for the next WRC scheduled for 2007 (agenda item 7.2) and the revision of footnotes to the Table of Frequency Allocations (agenda item 1.1). A member of the IARU core team has been assigned to follow each of these five items, with the most focus being on 7 MHz.

It is the intention of the IARU core team to send timely and accurate reports of final decisions reached on Amateur Radio issues. It is important to remember that nothing is final until the second reading of a document in the Plenary, which in the case of controversial issues will not take place until the final week of the conference, 30 June to 4 July.

--

Look for up to date briefings on the ARRL website at www.arrl.org and weekly summaries here on Amateur Radio Newsline. (ARRL, Q-News)

IN THE MEDIA: HAM RADIO HIGHLIGHTED ON WBUR RADIO

Ham radio was the featured guest when WBUR radio in Boston Massachusettes devoted its show titled “The Connection” to the hobby on Thursday, June 12th. Hosted by Dick Gordon, the show’s theme was that ham radio is alive and vital with close to two-and-a-half million hams world wide still consider ham radio their preferred way to fly.

The program was also centered around the new book titled “Hello World: A Life in Ham Radio” by Danny Gregory and Paul Sahre. A book based on the collection of QSL cards of silent key W2OJW. And while neither of the authors was there, Bob Hopkins, WB2UDC was. Hoskins is Director of the Computer Center at Cooper Union University in New York and played a key role in the books development:

--

Hopkins: “Hello World is a wonderful book, and where I work over at Cooper Union I have collegues that do many things. We have an engineering school, an art school and an arcetecture school. Because of the archecture aspect, a collegue of mine who works at the Princeton Archecture Press as well as Cooper Union contacted me and said that he had a couple of friends who were thinking of putting together a book on ham radio post cards and wanted to do the graphic design and would I be interested in having a conversation with them. I said -- oh sure -- fine -- bring them in. These guys came in with these fabulous cards dating back to 1927 up to the present.”

--

Also appearing on the program were were Moody Law, WQ6I in Claremont California, Joe Leto, W0ANT from Ankeny Iowa, and Harry Han, BG4AGY, in Shanghai. Each spoke on the way ham radio has affected their personal lives and those around them.

Even though its well over a week since the perogram aired, it is archived as a Real Audio stream at the WBUR website. To hear it take your web browser to http://www.theconnection.org/shows/2003/06/20030612_b_main.asp

Our thanks to Daron Manoogian who is the Manager of National Program Marketing at WBUR for permission to use the audio you heard in this report. (K1TW)

**

RADIO LAW: NY HAM CITED UNDER STATE SCANNER LAW

A New York ham has been cited for having radio gear in his car even though the state law governing scanner radios exempts licensed Amateur Radio operators. On May 31st Richard C. Lalone II, KC5GAX, of Calcium, says that he was stopped while driving well under the posted speed limit by a New York State Trooper and given a ticket for having Icom IC 1500 and IC 706 radios in his vehicle.

Lalone says via the qrz.com website that he did try to explain that that he was an Amateur Radio Operator and even provided his Amateur license for the officer’s review. Apparently, this was not good enough and the ticket was issued.

Lalone appeared in court on June 10th to answer the summons. At that time he approached the judge with both his license and a copy of New York Traffic Law 397 a copy of PR Docket 91-36. But the Court Recorder immediately took the documentation from the judge and returned it to KC5GAX. The judge then conferred with the Court Recorder after which he told Lalone that he was entering a plea of innocent for him. He then instructed Lalone to seek an attorney and be present in court July 9th. They court then offered KC5GAX paperwork to obtain a public defender, and returned the citation with the new court date.

Its not clear as to what will transpire on July 9th. Lalone’s posting did not state if this was a trial date or other type of preliminary hearing. If he is convicted of violating New York’s scanner control law Lalone faces a fine of $1000, 6 months in jail, or both. (W6EM, qrz.com)

**

ENFORCEMENT: FCC WRITES PART 15 DEVICE USERS ABOUT ALLEGED INTERFERENCE TO AMATEUR RADIO

Turning to enforcement issues, the FCC has written two Northern Virginia residents to follow up on complaints from a local amateur. A ham who alleges that he's on the receiving end of harmful interference from telephone devices with the capability to support multiple cordless remotes. Amateur Radio

Newsline’s Bill Pasternak, WA6ITF, has more:

--

According to the ARRL Letter both units interfereing with Bernie Keiser, W4SW, of Vienna, Virginia, are unlicensed Part 15 consumer electronics made by a well-known manufacturer. In separate June 2nd letters to the two users, the FCC’s Sharon Bowers pointed out that if their units are the cause of harmful interference to a licensed spectrum user, they are responsible for solving the problem. Also, that the operator of the device is responsible for correcting the interference or ceasing operation whenever such interference occurs.

Bowers is the deputy chief of the Consumer Inquiries and Complaint Division of the FCC's Consumer and Governmental Affairs Bureau. She explained in her letters that the equipment was classified as an intentional radiator and noted that harmful interference to a licensed radio service from such a device is a violation of FCC rules. She advised the consumers that the alleged harmful interference must be corrected before they may use the devices legally. She suggested they contact the manufacturer or retailer of the equipment to see if they'd either allow them to return them or exchange them for devices that don't cause interference.

The interference to W4SW’s ham radio operation took the form of broadband noise from 2400 to 2450 Mhz. This made it it difficult for him to hear the AO-40 downlink and beacon in the 2.4 Ghz band.

For the Amateur Radio Newsline, I’m Bill Pasternak, WA6ITF.

--

The complaints against the two Vienna Virginia consumers represent a bit of a turnabout from the typical interference scenario. Usually its the ham who generates complaints of RFI to consumer electronic gear and hears from the FCC. (ARRL)

**

ENFORCEMENT: HAM ACCUSED OF FALSE DISTRESS CALLS ORDERED OFF THE AIR

A California ham has lost his right to operate an Amateur Radio station. This, based on allegations by the FCC that he may have been the source of a number of phony distress calls made by radio.

On June 3rd the agency’s Riley Hollingsworth notified Michael V. Swift, the now former KG6QOB to inform him that his license had been cancelled. This, based on evidence that the San Ramon ham had made numerous false distress calls on Marine Channels 16 and 22A.

In his letter Hollingsworth said that in view of the agency’s action that Swift no longer has authority to operate Amateur Radio transmitting equipment. He also warned that any continued on-air operation by Swift could lead to a fine or criminal prosecution. (FCC, RAIN)

**

SPECTRUM REALLOCATION: FCC PROPOSES UNLICENSED DEVICES IN THE 5 GHZ BAND

Still with regulatory matters, the FCC has proposed making 5.47 to 5.725 Gigahertz available to National Information Infrastructure devices, including Radio Local Area Networks, on an unlicensed basis. If adopted, this plan will increase the spectrum available to license-free devices in the 5 GHz region by nearly 80%.

The complete story is on the web at the FCC’s website. A direct link to it is http://hraunfoss.fcc.gov/edocs_public/attachmatch/FCC-03-110A1.doc (CGC)

**

WITH THE HANDI HAMS: NEW BLIND FRIENDLY WEB THEME FOR WWW.HANDIHAM.ORG

Phil Temples, K9HI, has created a blind-friendly theme for the Handi Ham System website. The reorganized site eliminates the complicated page structure that works well for sighted users but was difficult for blind users employing audio programs like JAWS or Window-Eyes to navigate. To take advantage of the new navigation system visit www.handiham.org and choose the "Courage" theme for easy blind navigation. (HandiHams)

**

NAMES IN THE NEWS: WA8SME NEW COORDINATOR OF ARRL'S "THE BIG PROJECT"

Mark Spencer, WA8SME, has joined the ARRL Headquarters staff as the new coordinator of the ARRL Amateur Radio Education and Technology program. That program is better known in ham radio circles "The Big Project." Spencer succeeds Jerry Hill, KH6HU, who has returned to Hawaii. (ARRL)

**

FOR YOUR READING PLEASURE: HEATHKIT - A GUIDE TO THE AMATEUR RADIO PRODUCTS

If you've ever owned a piece of Heathkit amateur radio gear, or wish you had, the Second Edition of Heathkit - A Guide to the Amateur Radio Products, by Chuck Penson, WA7ZZE, is a must for your library. Greatly expanded and updated, this 328-page collection of facts, photos and Heathkit history offers a terrific trip down memory lane for anyone who has built or has owned Heathkit gear.   Its published by CQ and available for order on-line at www.cq-amateur-radio.com or by phone at 1-800-853-9797 Monday to Friday from 9 a.m to 5 p.m. Eastern U-S. time. (CQ)

BREAK 2

This is ham radio news for today’s radio amateur. From the United States of America, We are the Amateur Radio Newsline with links to the world from our

only official website at www.arnewsline.org and being relayed by the volunteer services of the following radio amateur:

(5 sec pause here)

**

EMERGING TECHNOLOGY: THE TRUE UNIVERSAL REMOTE

A true universal remote unit that will literally help to control your entire lifestyle is now under development. Researchers on the project say that the all-in-one controller that would choreograph not just home entertainment systems but also intelligent appliances all around the house.

Maya Designs Inc. in cooperation with Pennsylvania's Carnegie Mellon University has created a prototype based on a Compaq iPAQ portable digital assistant. The experimental handheld has so far been used to control two lamps, a fan and a stereo with a five-CD changer. Researchers say that more is on the way once standardization of remote control codes for various appliances is achieved.

The Consumer Electronics Association is working on this aspect of the problem. It estimates the average household has at least four remote control units. It also understand why the consumer electronics industry considers a universal remote an important device for the marketplace. (Science Today)

**

RADIO AND SPACE: MOUNTAIN PEAK NAMED IN HONOR OF ILL FATED COLUMBIA CREW

A Colorado mountain peak has been named Columbia Point. This, in honor of the seven astronauts who died when the space shuttle Columbia broke up over Texas on Februay 1st.

The peak on Kit Carson Mountain in the Sangre de Cristo Range near Colorado Springs is close to the 14,081-foot Challenger Point. That peak was named in honor of the seven crew members who died in the Challenger space shuttle explosion in 1986. The newly cvhristened Columbia Point also is roughly 14,000 feet. (ANS)

**

INTERNATIONAL - EUROPE: PMR446 MEANS FUN

From a listener in Europe comes word of a new communications network called PMR446. This is a licence free 500 milliwatt personal mobile radio service that is quite similar to the United States Family Radio Service with one big difference. The pan-Eueropean service permits is users to connect their radio gear to the Internet using personal computers and software interfaces. The software of choice is eQSO and with it Eueropean experimenters have created a network of linked rf-gateways.

On the R-F side, the radio gear is limited to flea power and built-in antennas, but thanks to gateway linking PMR 446 is quickly developing into quite a hobby thats bringinging together hams and non hams alike. In fact, it even has its own home in cyberspace at www.446user.co.uk. Drop by and have a look at what’s happening on the other side of the Atlantic. (PMR446 Users Group)

**

INTERNATIONAL - HOLLAND: RADIO NETHERLANDS TARGETED BY PUBLIC BROADCASTER

Radio Netherlands management have reacted angrily to a recent edition of the Dutch domestic current affairs TV programme Nova. A story reported on Nova said that drastic budget cuts of up to 85% was in the offering for Radio Netherlands, and as a result everything except broadcasts to the Netherlands Antilles and Surinam would be scrapped.

According to Radio Netherlands, the erroneous item was based on a leaked copy of a report into the efficiency of public broadcasting that was jointly commissioned by the Dutch Ministry of Culture and the broadcasters themselves. Nova seized on one section of the report and interviewed a representative of the Dutch Association of Journalists, who said this would effectively mean the end of Radio Netherlands.

But Radio Netherlands says that the report was not a call to action. Rather, its purpose of the report was to identify multiple scenarios where cost savings could be made. The example quoted by Nova was just one. The Hilversum based station also noted that decisions on the mission of Radio Netherlands are made by politicians in The Hague, not by other public broadcasters or the authors of a commissioned report. (Media Network)

**

ON THE AIR: MUSEUM SHIPS 2003

On the air, K3CLG says that the 2003 Museum Ships Weekend special event stations will be held on the weekend July 19th and 20th. Operations will encompass all modes including phone, C-W, PSK-31, APRS and even contacts via the Internet Radio Linking Project or IRLP. You can check on all the details at this easy to copy URL. Its all at www.qsl.net/ww2dd/event.html (K3CLG)

**

DX

In D-X, word that SM3CVM, plans to be on as portable CU2 from Sao Miguel in the Azores through July 6th. Activity will be mainly CW on 80 through 10 meters. This will be a holiday operation, so he will mostly be active late evenings local time. QSL to his home callsign via the bureau or direct to his callbook address. (GB2RS)

Also V31MX and V-31-M-F will be active from Caye Caulker from July 23rd until noon of July 29th. They will operate on 80 through 10 meters SSB with some CW activity. QSL both callsign via KZBCN, either direct or via the bureau. (OPDX)

**

THAT FINAL ITEM: N6ZE'S CROSS-COUNTRY ROVING ODYSSEY

And finally this week, the story of Peter Heins, N6ZE, who may now hold the record for a QRP Rover in the June ARRL VHF QSO Party. In less than two days, Pete managed to rove coast-to-coast, from Grid Square FN-20 to CN-87. Thats a distance of 2754 miles and he operated 6 and 2 meter SSB from each location. Here's how he did it.

From 1400 to 14:45 E-D-T on Saturday June 14th, Pete was on the air from park bench overlooking Hudson River at Weehawken New Jersey. From there he even managed to work a station in grid EL-86 thru the tremendous E skip that was present at the time.

A bit more operating from a hotel room in midtown Manhattan followed until 15:30 Eastern Daylight Time. Then a quick drive out to the airport where Pete, who is a commercial airline pilot, traded his ham radio microphone and key for the co-pilots seat of a Boeing jetliner. He then spent the next several hours flying to Salt Lake City Utah.

During the layover, Pete rented a car, unpacked his FT-690 and IC-202 and took to the airwaves. From 8:45 to 15:30 Mountain Daylight Time hN-6-Zed-E roved through Grids DN30, 31, 40 and 41 operating both 6 and 2 meters.

He then repacked the gear, got back in the plane and flew it another 689 miles on to Seattle. Thanks to another hours time change, Pete was back on the air around 19:52 Pacific Daylight Time in Grid CN-87 from the airport ramp making two QSO's. His last contact took place at 19:59 Pacific Daylight Tine. That was just 1 minute before end of contest.

His totals for the contest period: On 6 meters he had 16 QSO's, 16 QSO points and 8 multipliers. 2 meters yielded 24 QSO's, 24 QSO points and 9 multipliers for a grand total of 960 points.

In his posting to the VHF Reflector, Pete put out a special thank you to the hams in the Salt Lake City area who provided lots of information for operating sites in 4 grids that helped to make his cross country VHF roving odyssey, complete. (ARNewsline™, N6ZE)

Hi Roger.

Roger Halstead <rdhalste@tm.net> wrote in message
news:<982afvsisl0l326975etfv4roa6u6ldi53@4ax.com>...

> The press release I saw about a month ago described a device that was passive. It required being in the proximity of a receiver as in using "smart tags" for clothing. With a bit of adapting the smart tag principle should be capable of working out to a couple hundred yards

This was one of the fears expressed by WD4LCM: That they would be passive devices activated by dangerously high levels of irradiation. Imagine the power needed to fill an area say 1/2 km^2 with radiation of some kind intense enough to power a device under the skin (effectively shielded in a conductive saline medium) and provide it enough to broadcast a recognition and location signal.

Do you want to stand next to someone generating RF to
power a chip 200 m away? Say it consumes 10 mW to
transmit back at 2 mW: 10 mW in a 10 cm^2 receptive
area is 1 mW/cm^2.   A sphere 200 m in radius has
area 4*Pi*(200 m)^2 ~= 500,000 m^2 ~= 5*10^9 cm^2. So,
a nondirectional transmitter would have to output,
at least momentarily, 5*10^9 mW = MegaWatts. Anyone
nearby would get cataracts! Any radio equipment nearby
would pick it up, no matter how sharply tuned.

I agree that any such device should be battery or
solar powered and not implanted in living tissue.
If so, it might be designed to last years,
especially if only queried occasionally.

Yes, this would be feasible, I think.

Roger:

Don't give up on MixW. It is a great program for almost all of the sound card modes.

Try http://www.mixw.net/ for registration information. It is worth the $50.

73,

Ken K1XS

Well, they don't really work quite like that and it takes little power
to "sense" one.

ID cards and library cards have used a version of this for years.

>irradiation. Imagine the power needed to fill an area say
>1/2 km^2 with radiation of some kind intense

It only needs to cause a circuit to "ring"

From what I've seen and read, the transmitter (which is not implanted)
runs not much more power than a wireless computer network connection.

Now figure the power density in an area where there are literally
thousands of wireless network connections and the users are trying to
extend the distance.

I'd have far more concern over the wide spread use of wireless
networks, or cell phones...and I really don't worry about them either
except from an interference basis.

dr OMs

Has everyone a detail description (schematic-diagramm)
from the Kenwood TS-940S option IF-10B , the remote-
control PCB.

The PCB is carrier from a UART 82C51 and MAX??? chip.

also important: interconnection from pin(pcb) to pin (trv)

thanks in advance

The National Institute of Standards and Technology (NIST) is close to
signing a Lease Management Agreement with Clear Channel
Communications, Inc. for their flagship Time and Frequency station,
WWV, Fort Collins, Colorado.

More info and MP3 format sample at
http://www.mindspring.com/~lownoise/wwv.html .

And here's an oldie but goodie, posted, a while ago, to
rec.radio.shortwave by Radiomatt:

From: Radiomatt (radiomatt@aol.com)
Subject: WWV Survey
Newsgroups: rec.radio.shortwave
Date: 2001-02-22 08:38:17 PST

Dear SWL:

As you know the National Institute of Standards operates radio stations
WWV,
WWVH, and WWVB for purposes of providing timely information to the Short
Wave
Community.

As part of our GAO review process, we are required to justify our
continued
funding. We ask that you complete the following questionaire and return
it to
the address at the bottom of the form:

GENERAL:
Your Age___
Your Sex___ (PLEASE, do not answer "three times a week" or "yes")
What are your most frequently listened to frequencies (mark '1" for the
most
used, "2" for the second. and so on)
2.5 MHz ___
5.00 MHz___
10.00 MHz___
15.00 MHz___
20.00 MHz___

25.00 MHz___
60 kHz___
60 Hz___
How much time each day do you listen to WWV, on average?
0-4 minutes___
5-10 minutes___
11-30 minutes___
31-60 minutes___
61-180 minutes___
over 181 minutes___
Do you monitor constantly?   YES NO (Not more than 24 hrs per day)

What is your age?____
Are you listening to WWV now?___
Are you able to retune your radio? YES NO
Are you incarcerated? YES NO
(If YES, is WWV being used as part of an interrogation process? YES NO)

Stations WWV/WWVH currently carry additional features, please check those you use regularly:
Propagation Forecasts___
GPS Information___
Weather Alerts___
DEFCON Status___
Sports Scores___
Stock Quotes___
Stock Market Updates___
Casey Kasem Countdown___
Voting in Congress___
Population updates___
Pork Belly Prices___
Time Signals___

What is the longest time you have listened to us in one sitting? ____ Hours
Were you inebriated at the time? YES NO
Did you enjoy our varied programming? YES NO
Would you object to commercials from oil companies? YES NO
If AOL/Time Warner were to provide enhanced programming, would this increase your listening time? YES NO

What sort of program enhancements would you like? (check all that apply)
Please remember that each of these items must be less than 55 seconds long.

Poetry___
Short Encyclopedia Articles___
News___
Sports Scores___
Book Reviews___

Paid Personal Greetings ___   (Happy Birthday, etc)
Paid Personals___   (Man seeks Woman, etc)
Paid Obituaries___
Paid insults___
EBay auctions___
Disctionary entries___   (definitions, spelling)
Anti-communist propaganda___
Anti-orient propaganda___
Anti-Aussie propaganda___
Readings from Scriptures___
Love Personals___
UFO Alerts___
Autos For Sale___
Other classifieds___
Capsule Reviews of Shortwave Radios___
Capsule Reviews of Shortwave Antennas___
Computer tips___

What type of receiving equipment do you use to receive our signals?
Tube Home-type Radio___
Tube Communications-type radio___
Portable transistor radio___
Portable tube radio___
Heavy tube radio (over 50 lbs) which I carry around to show off___
Heavy tube radio nobody wants, so I use it for WWV___
Crystal set___
Clock with internal radio which is reset by WWVB___
My teeth___
Homebuilt Radio___
Solid state Communications receiver___

What is your ZIP code?_________ (If overseas, what country?__________)

Do you listen to CHU?
Which Frequency?
3330___   7335___ 14330___
On a scale of one to 30, which do you like better?   CHU___ WWV family___
Are you Canadian? YES NO

How important is time accuracy? If WWV were to reduce accuracy, costs would be lowered and more ancillary services could be offered. Please indicate level of tolerance: figures are one part in___/second(10 to nth power)
__10 -12
__10 -8
__10 -3
__10 +2
__10 +30

Accuracy of other services. Please indicate your tolerance for
Sports Scores ___(+ or - 10 points)   ___(+ or - 1 point)   ___ (exact

only)
Dow Jones Average ___ (+ or - 25%) ___(+ or minus 10&) ____ (exact
only)
Weather Accuracy: 100%___ 50%___ 10%___ -10%___ -50%___ -100%___

I was thinking of buying a 220 handheld transceiver , and using a mobile
220 antenna that i have, attached to aluminum pan on balcony, until such
time i get a high quality vertical antenna . Does anyone know or could
suggest how wel this might work?
Any replies would be appreciated.
Richard

Hello all. I used to have the Artsci repeater mapbook, but I can't seem to find
it. It has great maps of the individual states and shows the grid squares. I
need to know where exactly the line between FM29 and FN20 is. What would the
lattitude be? Anyone have a map of NJ with the line on it?

Should work well.

I use a 2-meter HT with a quarter-wave vertical clamped to the iron balcony railing-- works FB!!
(I'm on the16th floor, and that helps.)

Do you have any friends with GPS ?
The some of the Garmin units have a Maidenhead Grid system
built in .
My Rand McNally shows 40deg running South of Lakehurst & North of Toms River also
south of Fort Dix. It is 1:3,000,000 so that the closest I can get.

Thanks for the replies. I found a map that showed the line and got the information I needed.

I will soon have an FT-100D in the car with antennas for 6m/2m/70cm. I plan on working SSB when the bands are open and I'll need to know my grid square while traveling to work. It seems I stay in FM29 until I enter what is refered to as "Checkpoint 2" at Ft Dix (That's where I work). I will then be in FN20 for the short ride to where I work on Ft Dix.

Gee, I could go there during a contest and be a rover, going between FM29 and FN20! :)

Hi All,

I require the PC board layout (any form but Bitmap) for the DDS VFO
design published in the QEX 1997 magazine. This project is by Curtis
W. Preuss, WB2V.

-Thanks in Advance

I am a rank newcomer to ham radio and considering QRP/CW as a place to
start. Everything I have read seems to point to 40m as the "newcomer" band
of choice perhaps because it permits CW transmission by Technician plus
license holders.

I am considering building a Vectronic transceiver kit. Any comments pro or con would be appreciated unless such a discussion is off-limits for the newsgroup.

Thanks
Karl

Karl

In the summer 40M and 80m can be very noisy and difficult to copy when operating QRP, but you can work some short to medium range contacts.

The best would be 10m and down, IF the bands are open but 10M/15M are pretty dead right now (solar cycle down and summer) May get better towards fall.

I have worked more QRP on 10M and 15M than any other band -- both voice and CW -- BUT solar cycle is down now. I Have worked South Africa QRP on 10M several times.

ANON with WAS-QRP and DXCC-QRP

From the ARRL: at URL: http://www.arrl.org/FandES/ead/classes.html

Technician Class operators are authorized to use all amateur VHF and UHF frequencies (all frequencies above 50 MHz). Technicians who pass a 5 WPM Morse code examination are entitled to limited power outputs on certain HF frequencies. "Technicians with HF" may operate on the 80, 40, and 15 meter bands using CW, and on the 10 meter band using CW, voice, and digital modes.

Band plan privileges, power etc at URL:

http://www.arrl.org/FandES/field/regulations/allocate.html

Subject: Non contest oriented club - any interest?
Message-ID: <20030704082350.23545.00000082@mb-m23.aol.com>
Xref: archiver1.google.com rec.radio.amateur:5456

I became interested in amateur radio, so I joined a club. Then, I learned they are not interested in the types of activities I am interested in. I was more interested in hands-on activities, and to utilize the capabilities of amateur radio.

Soon, I realized that the clubs tend to focus on contesting, antennas, and Morse code - things I am not interested in. I know some people find contesting interesting, but to me its boring after about 5 minutes. I tried proposing my ideas within the club, but there was no interest. I would imagine people that like to do hands-on activities would also find these typical clubs very frustrating.

Seems like those that join these types of clubs tend to focus on certain aspects and there would be no sense trying to convert them. Well that makes sense. I wouldn't be too receptive to be converted to learn Morse code, for example.

I would like to propose a different kind of club. One that focuses more on radio direction finding, mobile operation, APRS, kit building, homebrewing, troubleshooting. Even antenna setups. Expanding one's capabilities is welcomed. Hands on activities would fit in this type of club. Activites where one can learn the capabilities of different modes are good also.

I hope I made it clear what this type of club would offer and the difference between this type of club and typical Amateur Radio clubs. Anyone else interested in this type of club? If you are in the MA/Southern NH area, just let me know and we could get this thing started. You can email me at vshah101@aol.com also.

The free market has spoken, then.

Do. The free market will pronounce judgment on your idea.

WHERE ARE ALL THE TOUGH GUYS IN THIS SHORTWAVE NEWSGROUP?

Where are all the tough guys in this shortwave newsgroup like
GrtPumpkin32 (Linus), RHF, Bball, N8KDV(Steve), Starman, Phil, Frank
Dresser, Dan Conti, Tad Early, Tasd Early, Red October90, Brian
Denley, DeWayne, Al Patrick, Agent Smith, Burr, Mike Maghakian, Paul,

Joe Strain, bpnjensen (Bruce Jensen), Diver4777, Radioman390, Eric F. Richards, R274C, Hfguy, DougSlug, RFCOMMSYS, Signalchaser, Robert, MJC , Dxlover, Elfa , J Tabor, Telamon, Dxing since 1957, Michael Moore, Mark Keith, Radioguy and the rest of the regular contributors of this shortwave newsgroup. "I THOUGHT ALL OF YOU ARE MACHO MEN", What happened? Perhaps your all R.I.P. (Rest In Peace) dominated by the intellectual gays and politics groups.

Perhaps all of you are hiding at the back of your wives because you cannot fight back against the infiltrators like the gays and the politics groups that dominated the shortwave newsgroup at this time. In short all of you are a bundle of cowards, you are running away from the high ground of the shortwave newsgroup. Wake up, fight back your rights. That is your group, don't allow the infiltrators to throw you out of your own newsgroup.

The infiltrator has discovered that all you in this shortwave newsgroup are all weak. You cannot compose a very intellectual article or contribute valuable information related to shortwave which you can learn out of it. Instead all of you placed rubbish topics, using offensive languages on your posts and insulting each other.

In order to throw out the infiltrators, you should learn how to compose a good article related to shortwave which everybody will learn. Because its not only you are reading or viewing this newsgroup but it becomes the focus of the world to read articles. Even though they are not a member of this group but they read those articles that you post in this shortwave newsgroup. Remember this is the Internet, people get information from this medium.

Google shortwave newsgroup is not moderated why, because they want freedom of speech and expression to post a good article related to the topic and accept criticisms on the article posted on the group and allow also exchanging of views in a certain article. It doesn't muzzle free speech or express its views. Google shortwave newsgroup is like a mirror of democracy in the public arena on the Internet.

Stop hiding, there is nowhere to hide. Go and challenge the gays and politics infiltrators on your shortwave newsgroup. "STOP THEM".

Andre

Which newsgroup, Andre? You posted this to three, none of which are
'shortwave' newsgroups. WTF you been smokin' dude ?

They are no tough guys here. Just hams.

>WHERE ARE ALL THE TOUGH GUYS IN THIS SHORTWAVE NEWSGROUP?

I personally only read the amateur radio newsgroups, like this one. Never been
in any shortwave newsgroups.

Goto www.newsvhf.com   they like playing with more than just CW during contests. A little out of your area (CT) but they draw people from CT, NY, MA and RI all the time as members because of the different things they do. Mainly they like to play around on SHF.

I do think your right about most clubs... typicially i've found that clubs are where the older crowd goes to hang out in person and talk about how much radio sucks now because you don't need to know code, or talk about their medical problems they didn't want to talk about over the air. :)

Join the Radio Society of Great Britain for �1.05 or 2 US dollars

Normal membership cost is �42.50 but if you join in July

with the RSGB special offer Membership will cost you �1.05

That�s a massive saving of �41.45 pounds!

For that you get one years membership of RSGB which includes the RSGB
national radio magazine Radcom.

Go to http://www.qsl.net/g3zhi/rsgb.jpg for the application form.

After about 13 inches of rain this spring, I have infinite SWR on 20,
30, and 40 meters on the Cushcraft R7000. Is it most lightly water in
the 20/30 meter trap, or water in the matching network on the bottom.
The antenna (auto antenna tuner) tunes properly on 10, 12, 15 and 17
meters (R4000!!).

Hi all,

there was a HAM related movie on TV here in Germany
back in the 80s. The title was "The French Atlantic Affair"
("Victor Charlie ruft Lima Sierra" in German).

I would really like to see that movie again, but I couldn't
find it in any of the Internet online shops.

Does anyone know where I can buy this movie
(either on DVD or VCR) in English or German?

Does anyone know this movie and if yes, how did you
like it?

Cheers and Thanks,

Andre, DH5TA

I sold my pair of maxon GMRS 210's about a year ago. I bought them in 1997 I think. What would today's equivelant be of (any brand) this radio? I got 10 miles on full power. This was in Ocean City Maryland back in 2001. I was on the boardwalk, my friend just drove in past Fenwick Island.... Those of you familiar with the area know how congested it is. Thanks!

Does anyone have any sources of information about this circuit for
combining the output of a class B amplifier into a single load using
just one piece of co-ax transmission line somehow connected in parallel
with the load and amplifier output. I saw the circuit in an amateur
radio publication several years ago but don't know which one.

Class B single-ended radio amp?

Class B push-pull (balanced) radio amp?

Single-ended load?

Balanced load?

What does "connected in parallel with the load and amplifier output" mean?

Too vague -- what are you trying to accomplish? See Jerry Sevick for excellent coverage on Ruthroff and Guanella transmission line transformer designs.

Can anyone recommend an inexpensive but very effective 6 meter antenna?
All 6 meter antennas i have seen in various catalogs are very expensive.
Any replies would be appreciated.

MFJ sells a 3 element yagi. I've used one for a couple years and I've worked
several countries in Europe, a lot of the US, the Bahamas, Canada and even the
Galapagos Island with it about 10 feet off of my roof. It's not the sturdiest
of construction though. I am not sure what price range you are considering, but
the Cushcraft 3 element goes for around $100 and I am sure it is better made.
This is all assume you're looking for something directional, probably SSB?

Richard...build one.  Two sections of wire 54" long (low end of band) and some
coax.  RatShak 72" whips also work well, use a piece of white PVC for the
center support.  About 6 turns of coax, approx. 6" dia. loop will decouple the
feedline.  If you want a vertical, use a Jpole...it costs a few bucks for the
copper pipe and they work well.  Do a Google search and you'll find lots of
```

references.   The MFJ Andy mentioned also works well but is not good in windy or harsh weather areas. Be more than happy to help out...give us some more info on what you want....SSB/CW or FM.

BTW, there is a 6M contest this weekend...get on and join in the fun! ARRL site has the details under contests.

A

I think you're after the antenna coupler loop thingy. You make a loop that goes around to the two (or more) radios and to the antenna. The radios are one wave length apart and the loop is n+1/2 waves long, total, so that signal from one radio arrives out of phase from each direction, at the other radio(s). The antenna taps the loop half way between radios, ie on the 1/4 mark, so it is N+1/4 and N+1+1/4 wavelengths from any radio, so signal paths add together instead of cancel.

There may be some better lengths to use. These are just the ones I can think of at the moment. Of

course, this only works over a narrow frequency
range, because it depends on the wavelength.

No kidding! Last July we had a really strong storm come through. In the morning, I went outside to find the reflector on the yagi bent into an inverted V. The antenna still tuned fine though! MFJ offered to replace any parts that were damaged. I managed to straighten the element and it's been in fine working condition since. When I bought a dualband (2m/70cm) yagi from Cushcraft, I was very impressed with the construction, so if I were to do it again, I'd get the Cushcraft 3 element for a few dollars more.

WTB: Manual for the Heathkit HW 16 CW Transciever

I would like to buy an assembly manual for the Heath Kit HW 16 Novice CW Transciever. I would be willing to settle for a Xerox or photocopy as long as it clear and readable. Please include shipping to zip code 77701 with your asking price.

Thanks.....Pat Green.... KC5WCC

Hi there,

Thanks very much for reading.

I have the following problem:

Config:
Laptop Armada 1700 ;

The programs that I have troubles with are MixW, ChromaPix, GetCW and Truetty.
I input a signal via the soundcard; signal is controlled by microphone input of mixer (there is just that input).
When I listen over the speakers it sounds ok to me.
But when I use it as an input, some programs seem not to respond toit, or the signal i see (waterfall or other graphic) is to soft (low).

I know the programs work ok, beacause on my desktop they do.

Does anyone have any idea what I can do?
Is there a hidden setting that can 'boost' the input or throughput?
Or is this often the case with laptop computers???

Any help is bery much appreciated.

Kees

 | When I listen over the speakers it sounds ok to me.
 | But when I use it as an input, some programs seem not to respond toit,
 | or the signal i see (waterfall or other graphic) is to soft (low).
 |
 |

I seem to remember that there is a setting somewhere within the sound
card configuration, which allows you to increase the gain on the line-
in socket. It is just a ticky box type.

Can someone please help me with the buttons on the front of a TAD (AWA) M8
commercial VHF Hi band radio?. I have a V3.A EPROM that covers 144~174Mhz.
I have no problems programming it, and most of the channels are filled with
2 m freqs. I just need to know what the buttons do. i.e. "scan". "sel",
"mode" & "ent". Mainly I just want to be able to scan. Any other tricks
that anyone might have would be nice to know too.
Thanks. Matt -VK2DAG-

Kees.

You need to check the advanced audio settings, and turn on the "Mic Boost" or "Mic Gain" by clicking the checkbox provided for this.

If you have a volume control icon (loudspeaker icon) in the task tray just to the left of the clock, right click it and choose "Open Volume Controls".
Now click Options and then Properties, then select Recording.
Make sure that Mic or Microphone box in the scrollable list of controls is checked, if not left click the box once to check it.
Now click OK and another set of volume sliders will appear.
Click the Advanced button under the microphone fader, and check that the gain or boost or whatever the manufacturer has called it is checked or selected.
Note that depending on the make / model of soundcard the Advanced button may or may not be under the Mic control fader.. it could be in the middle of the window under all the faders.

You can see the difference made immediately by leaving Mix or whichever program running, and turning the various settings on / off and adjusting the faders while watching the waterfall.

Not all soundcard drivers call the various controls and checkboxes by the same names, so you may have to apply a little guesswork or consult the help for the sound card.

My card is a Creative Soundblaster AWE64 Gold, and the setting names given are those used by Creative Labs.

If you do not have a volume control in your task tray, you can easily add it.

Go to Start > Settings > Control Panel (you may not have Settings, depends on your operating system, I use Windows 98).. once at Control Panel, find the Multimedia icon and double left click to open. About 1/3rd the way down the resultant dialogue (Windows XP) or at the bottom of the dialogue (Windows 98), you will see a checkbox labelled "Show volume control on the taskbar".. check the box and the loudspeaker icon will appear in your task bar near the clock. It will either be a yellow loudspeaker or a dark coloured loudspeaker depending on your operating system. You can then follow the steps above.

Finally, as it's a laptop, you may have to find out how to disable the built in microphone in order to use the external mic input. The laptop user manual will tell you how to do this.

Paul MW0CDO.

> Class B single-ended radio amp?
>
> Class B push-pull (balanced) radio amp?

I think it was a class B push-pull amp operating at UHF.

> Single-ended load?
>
> Balanced load?

The load had both ends connected "hot" to the circuit as opposed to having
one end grounded. Possibly a balanced load but it was depicted by a

resistor.

> What does "connected in parallel with the load and amplifier output"
> mean?

The schematic had the amplifier outputs on the left, the transmission line section in the middle and the load to the right. It looked like all 3 were connected in parallel somehow. I think one terminal on the transmission line section was grounded.

>
> Too vague

It was about 10 years ago I saw the article.

> -- what are you trying to accomplish?

Combine the outputs of two class B amplifiers that I think were in a push-pull configuration into a single load.

> See Jerry Sevick for
> excellent coverage on Ruthroff and Guanella transmission line
> transformer designs.

I have Jerry Sevick's excellent book and this power combining circuit was definitely not a Ruthroff unun or Guanella transformer. It vaguely resembled the Ruthroff balun.

It isn't that. The article described a device to combine the output of two Class B amplifiers that I think were in a push-pull configuration into a single load where both ends were "hot" as opposed to having one grounded.

Sorry, after reading this thread for several days, it still isn't making much sense to me.

First of all, you don't normally have TWO Class B amplifiers in a push-pull configuration. Generally speaking, you have a single amplifier in a Class B, push-pull configuration.

Second, if these are RF amplifiers in push-pull, they generally drive a balanced tank coil assembly that generally drives an inductive link. The alternative is a Pi output, and that's pretty damn difficult to drive from a push-pull driver.

Then too, my experience with push-pull amplifiers running in Class B is largely related to modulators, whose push-pull outputs are generally combined in a modulation transformer to modulate a final amplifier of some configuation.

Can't say that I've even run into a Class B, push-pull r.f. final even on SSB, which leads me to ask the question: What is your application?

Over the past 30 or so years, I've worked with a great number of coaxial transformer types, mostly in pulse service, but some were for broadband amplifiers of various types. Still, excepting for a balun type device, I cannot recall any that combined push-pull amplifier stages into a single-ended output.

Perhaps someone else has and can better comment on the subject. As for me, I'm still trying to visualize what it is that you have in mind and are trying to do.

Harry C.

You can have both. Class B amplifier modules do exist and two of them can be used in a push-pull
configuration that works in an identical way to a single class B push-pull amplifier with two power
transistors. The schematic in the article had two symbols for an amplifier rather than two transistors.

The circuit was intended to replace a magnetic (flux coupled) transformer.

I don't know what I was thinking selling my Maxon GPRS 210's but these
Midlands stink. Range sucks, its hard to use ugh. I need something
on par with that 210.

It is still not clear what is the goal here. All this talk about both sides of the load being "hot" makes no sense and the class B thing is not tied in as well..

IF you want to use TWO amplifiers (any type, but same) to deliver power to one load (most commonly unbalanced) there is something called a Wilkinson (or is it Wilkinsen) splitter/combiner. You use one on the inputs of the two amps and one on the outputs of the two amps and you get twice the power out, with, of course, twice the drive power. The two amps must have the same delay, therefore they should both be the same type and construction and be connected to be fed in phase - equal lengths between the Wilkensons.

I don't know if there is a balanced equivalent to the Wilkenson, but it's probably possible

I believe lower frequencies have less attenuation. I also think it is pretty high. The people who trace undergound pipes use pretty low frequencies, in the audio range, but they are actually magnetic rather than RF, but that's the extent of my information.

Metal detector information might be a place to start. I know that different frequencies are used for finding different types of burried stuff.

The submarine communication system which gets under the sea, to some extent, is what 20KHZ - I forget.

Good luck, 73

I use a Par Omni-angle OA 50 and it works GREAT for 6-meter SSB. No rotor
needed either!

This invites the question: Where would a single-ended Class B
amplifier be used, and for what purpose?

It throws away all of those nasty, depression, unwanted negative
half-cycles, keeping only the nice positive ones.

Bipolar transistors are no longer recommended, since their
medication winds up being cost-prohibitive.

For linear RF power amplification. No distortion results because the plate tank is resonant. The so-called "flywheel effect" restores the missing half cycle of the amplitude envelope; the harmonics are shorted. Robert Schrader (_Electronic Communication_; an old radiotelephone license prep text) noted that a loaded Q of the tank must be > 10 for this to work. Steve Cripps notes that a parallel resonant tank of sufficient Q was reasonable and physically realizable when the plate impedance was in the kOhms, but impractical in RF transistors where the drain can be in the sub 5 Ohm range. Thus he notes a harmonic short, through techniques such as a shorted quarter-wave stub, should be applied in modern solid state linear PAs.

A differentially driven push-pull linear class B amp is inherently a balanced configuration. A load that is "hot" at both ends sounds like balanced also. If you wish to use coax (which is unbalanced), to connect these two balanced devices across some distance, then you will need two baluns: one at the TX'er and one at the load (antenna?). The antenna end balun would also perform a *power transfer match* between the line and the load. The PA end balun would perform not a power transfer match, but instead a load-line match for maximum efficiency. (Steve Cripps RF PA design book is excellent.)

If you are connecting a balanced load directly to the balanced PA, then a Guanella "seems right" because of its inherent balance. It is really a bal-bal transformer, although it can be used to make a pseudo-balun. Norm Dye's and Helge Granburg's _Radio Frequency Transistors_ (p170, also see pp113-116, and fig 12-4 on p197) has a UHF push-pull that sounds more or less like what you describe, except that the coax isn't one piece (although the photo makes it appear that way). Dye and Greenburg schematically show some *coax* bal-bal transmission line transformers. Sevick does not disuss this as much as I know of it (3rd ed). These are 1:N^2 impedance ratios, and that sure does sound suspiciously like Guanella. Perhaps an analysis would reveal them as such. You might luck out with a search of Mot PA app-notes, since that is where Dye and Greenburg worked. The text I have is not extraordinarily detailed with regard to this. That said, it does have a few things like this that I have not seen elsewhere.

He could also just build a JPole. I did, very easy, works great. Cost me about $30 in parts from Home Depot and that included a can of propane for the torch, solder, flux and tube cutter. All you need is a pair of 10' 3/4" copper tube, 1 3/4" elbow, 1 3/4" T and a few end caps. Took only a few hours and it's awesome.

The Vx 150 is a very impressive radio. Bought both mine and my wifes for less than 120.00 dollars (ea) when Yaseu was running their specials. I have seen recently on Ebay, Radio Shack HTX 202's and HTX 404's go for as little as 45.00. I have a 202 and it is a good basic radio but of course it is not up to the goodies on current handhelds. Just before Yaseu came out with the 2800, I bought a 2600 for 129.00 from HRO. There are many bargins to be found if you take your time and search them out.

Interesting. Thanks for posting that.

I had initially considered this possibility, but rejecting it thinking
that the harmonics resulting from the distortion would be a problem.

Out of curiousiity, it this a common practice in todays linear
amplifiers? I had simply assumed that they ran as Class A or possible
some AB variant (obviously I'm thinking in terms of tubes).

One can get the software (+/- 60 US $) from the original project group at:

www.drmrx.org

They also tell you how you can modify Yeasu ; Drake ; Kenwood ham-equipment.
The mods are very easy and cheap.
A kit is +/- 25 US $

Free DRM-sofware (under the GNU/GPL) can be obtained from rhe Darmstadt University

www.tu-darmstadt.de/fb/et/uet/fgeut/mitarbeiter/vf/DRM/DRM.html

Brodcasts started with WARC 3

Hope this will be of any help

FS: ICOM IC-735 HF Transceiver, runs on 13.8V DC. All bands 160 through
10-Meters, general coverage receiver, 100 watts (adjustable)
transmitter. All modes CW/SSB/FSK/AM/FM. Works well - includes
power cable, manual (missing covers), does not have the little door
covering the adjustments (I don't think any IC-735's do).

I'm a little new to this so bare with me. I have a few Motorola PRO 5150 radios with a range of about a mile or two. I was wondering if I can tap into some type of public repeater much like a HAM operator would do. I don't want to purchase my own equipment, since I think that would be to costly. I'm looking for extended range in NYC.

thanks.

dan

The 5150 is a business band radio, to operate it you need
a business band license. If you don't have one I would advise
not using the radio. If you are looking to get into radio
get a Armature License and Radio. There should be plenty
of repeaters for your use.

In 1999, Applied Digital Solutions, of W. Palm Beach, Florida, announced that they obtained the patents to technologies which would allow a location / biostate device to be implanted in a human being.

In May of 2003 they announced a prototype of the unit, which they have dubbed the "Personal Locator Device".

---

http://www.adsx.com/news/2003/051303.html

APPLIED DIGITAL SOLUTIONS ANNOUNCES WORKING PROTOTYPE OF SUBDERMAL GPS PERSONAL LOCATION DEVICE

Specially designed antenna and induction-based power-recharging method function properly in field testing

Disk-shaped prototype is roughly the size of a pacemaker - future miniaturization expected

PALM BEACH, FL- May 13, 2003 - Applied Digital Solutions, Inc. (Nasdaq: ADSX), an advanced technology development company, today announced that it has developed and successfully field tested a working prototype of what the company believes is the first-ever subdermal GPS "personal location device" (PLD). Field testing and follow-up laboratory testing of the disk-shaped prototype confirm that the specially designed antenna and the induction-based power-recharging method function properly.

The dimensions of this initial PLD prototype are 2.5 inches in diameter by 0.5 inches in depth, roughly the size of a pacemaker. As the process of miniaturization proceeds in the coming months, the Company expects to be able to shrink the size of the device to at least one-half and perhaps to as little as one-tenth the current size.

The induction-based power-recharging method is similar to that used to recharge implantable pacemakers. This recharging technique functions without requiring any physical connection between the power source and the implant.

Dr. Peter Zhou, Vice President and Chief Scientist of Applied Digital Solutions, said: "We�re very encouraged by the successful field testing and follow-up laboratory testing of this working PLD prototype. The specially designed antenna is working as planned. While reaching the working prototype stage represents a significant advancement in the development of PLD, we continue to pursue further enhancements, especially with regard to miniaturization and the power supply. We should be able to reduce the size of the device dramatically before the end of this year."

Last year, the Company announced that it was accelerating development of PLD in response to demand from high-risk countries and other potential customers. The exact timing of commercial availability of PLD is unclear pending further technological refinements and achieving any required regulatory clearances. The PLD technology builds on United States Patent Number 5,629,678 for a "personal tracking and recovery system" which Applied Digital acquired in 1999.

In its PLD announcement last year, the Company said it is committed to providing customers with a full range of "personal safeguard technologies" that enhance personal safety, security and peace of mind. Other technologies in the Company�s line-up of life-enhancing technologies include VeriChip(TM), Digital Angel(TM), and Thermo Life(TM)."

Above and beyond privacy concerns is something that REALLY terrifies me. It seems to me that these devices could get extremely hot extremely quickly in the presence of high energy microwave radiation and "EMP" (electromagnetic pulse) weapons, such as used in the "E-bomb" that was talked about a few weeks ago. Am I being paranoid here? Are they immune to the point where it would be impossible or improbable that Al Qaeda, or a lone dirtbag, could kill our GPS-equipped children silently and at a distance of several dozens or hundreds of yards with an e-weapon?

I am neither a doctor, nor an engineer, but I am a ham who has burned his fingers on hot chips, transistors, and resistors more than once. The thought that this pain could be places inside an unknowing / unwilling child frightens and angers me.

If there is no problem, fine! But I think we really need to examine the potential before we expose ourselves to this risk.

If anyone has good technical data, PLEASE share it with this forum, as well as Congress and the FDA. Let's NOT wait to find out the hard way what a mistake we have made.

BTW...Applied Digital Solutions' CEO Scott Silverman will be on CNBC between 6:30PM and 7:00PM Ruesday, June 17, 2003.

Subject: Problem with Yaesu FT901DM
Message-ID: <20030617173702.09237.00001057@mb-m29.aol.com>
Xref: archiver1.google.com rec.radio.amateur:5410

I recently bought a used Yaedu FT901DM.

The radio works well, but I noted two glitches:

1. On transmit, I get 100-110+ watts out on all bands, with smooth and symmetric dipping of the plate (which is at the correct 50 mA with no drive).

However, if the Preselector tuning is way off (e.g., set for 80M while the bandswitch is set for 15 or 10M), and I key the transmitter on 15M or 10M with no drive, I can get an iC of 100 or 150 mA and a few watts output at various settings of the plate and load controls. This occurs even into a dummy load (haven't measured the freq. of the output yet). Is this xmitter instability, or a known behavior?

2. The memory module works fine, but when the rig is powered up, the "M" memory LED above the freq. display is strobing - I believe it should be off. When the "M" button is pushed, the memory LED comes on solidly and the memory is stored properly for use. (If I disconnect the memory module the LED stays off).

There are two trimmers in the memory module enclosure - wonder if one sets the LED illumination threshold, or if I just have a bad component.

Thoughts from those who know the rig? (Also, need a service manual).

73,
Scot

Are you kidding. In sleep mode the device probably uses
5 microwatts. And in active mode probably 50 mil watt.
for maybe 100mS. With today's technology the risk
is extremely small. And I imagine that the device is placed
in a shoulder or leg so if there is a problem the damage is
insignificant.

I'm not talking about internal - I'm talking about EXTERNAL sources of
microwave energy. Multimegawatt ERP pulses aimed at the victims from a
device that fits in the back seat of a car or minivan.

The technique is only used with somewhat low fractional bandwidths, which is
another way of saying narrow-band. Note
that wide-band cable amplifiers need "both halves." I think some of the hams use

"built in" band switches and the
correspnding tank selection to get pseudo wide-band operation. They have linears that go up to 2kW PEP -- pretty potent
all in all.

> > Out of curiousiity, it this a common practice in todays linear
> amplifiers? I had simply assumed that they ran as Class A or possible
> some AB variant (obviously I'm thinking in terms of tubes).

Yes, but of course providing enough gain is an issue along with the degree of linearity required. Theoretically, (or
maybe I should say ideally) narrowband Class A and B are linear, and Class AB is *not*. This is because the conduction
angle for Class B and Class A is constant (180 and 360 degrees respectively). The conduction angle changes according to
drive with Class AB, and one can show that a 3 dB increase in drive does not necessarily result in a corresponding
increase in output. I've found that folks are sometimes surprised about this.

But then, things not being ideal, Class AB can be quite linear in practice -- many of the LDMOS low microwave PAs are
Class AB from what I've been told and have read. This is because the non-ideal (or real) behavior can make a "deep" AB
transfer look more like Class B -- so if the harmonics are shorted and the load is properly matched to the PA, very good
linearity can result.

As the frequency goes up, Class A becomes mandatory because of the PAE issue. Note that Class B theoretically requires
twice the drive that Class A does for full swing. So when the available gain starts to get down to the 10 dB and less
range, Class B wouldn't be practical because the driver would eat up the efficiency gains, even if one could short the
harmonics effectively at microwave frequencies.

I'm working on some 802.11a/g solutions. Both the 2.4 and 5-6 GHz PAs are class A. We need to support OFDM with 48
data subcarriers, 4 pilot subcarriers, with each data subcarrier modulated with up to 64 QAM. Cost, linearity
(performance), power output (performance), and power consumption are pretty much at war with each other (like always,
but this is one of the nastiest I've seen).

How does this risk, if there even is one, differ from wearing metal framed glasses, having steel plates placed in your body to brace broken bones, having an implanted pacemaker, having a pocket full of metal coins, having a metal knife in your pocket, having metal keys in your pocket, or for that matter just wearing clothes with either metal buttons or with rivets (such as Levi jeans)???

If someone is going to go around zapping people with high energy microwave guns, they are going to find very few people who do *not* have some kind of metal object on their body, or in it, that will burn them significantly if it gets warm.

However, I'm not even certain that is of any concern because by the time that much energy is focused on a human body, how does it differ from putting a cat into a microwave oven and turning it on? That much microwave energy doesn't need _metal_ to heat something up.

yeah my company has all of the licenses required to operate the radios
so i'm covered on that front. but we are looking for some type of
extended range but dont want to break the bank either.

Well, the device is designed to be highly sensitive to frequencies in the GPS range. I would hope the front end would quickly fuse out before there were any significant heating, but if not, it seems there would be a possibility that the device would be a distance multiplier over the other objects you described. Not to mention the fact that it is internal, so it could not be easily removed. Pockets can be emptied, glasses can be removed, but the PLD (Personal Locator Device) is THERE until someone cuts you open and removes it.

I imagine that pacemakers would have a similar vulnerability, however,
the proportion of the population who have a pacemaker would be smaller
and a less attractive target than the masses of children desired by
the unit's maker.

As for an RF hazard, you aren't giving enough information. What is the operating frequency of the transmitter? What is the average power? If the transmitter outputs a digital signal, what is the peak power of a pulse?

Very wideband digital signals can be harmful, depending on peak (not average) output. Microwatts can be harmful, if the pulses have a height (in air) of 100 kV/m (Lu, et al, 1999).

If only the skin over the transmitter was exposed to transmissions, the implantee might feel the transmissions, but the damage might not be great. However, a 10W CDMA transmitter (~900 MHz digital) can cause skin nerve damage after prolonged exposure.

On the other hand, the question is where they would be implanted? I recall reading a paper by a bioscientist of some kind, in which inert plastic objects were implanted into animal MUSCLE, as I recall--however, I can't seem to locate the paper. The peculiar finding was that tumors developed when the plastic had flat surfaces, but not when rounded.

I think the investigation was to check whether shrapnel left in muscle would become harmful if left in. Apparently some cells are triggered to become cancerous if allowed access to a flat, inert surface. I'll try to locate the paper.

What about metal dental braces?

Moreover, the odds of items being removed from pockets and glasses not being worn at the exact time/space intersection where one may be so unlucky to be in the field of an EMP has got to be very unlikely.

So one ends up with a cigarette-type burn under/below the skin. I think if we have a bunch of enemies running around zapping us where we stand, that we will have greater problems than 2nd degree minor burns.

If you want to save the children from pain and demise, teach them how to think.

I entered a reply an hour ago in which I could not recall a reference to a paper on implanted inert materials. I still can't find that paper, but here is some info:

From PubMed:

==

1: Exp Toxicol Pathol. 2001 Feb;52(6):483-91.

Tumors in long-term rat studies associated with microchip animal identification devices.

Elcock LE, Stuart BP, Wahle BS, Hoss HE, Crabb K, Millard DM, Mueller RE, Hastings TF, Lake SG.

Bayer Corporation, Toxicology
Department, Stilwell, Kansas 66085, USA.
laura.elcock.b@bayer.com

Tumors surrounding implanted microchip animal identification devices were noted in two separate chronic toxicity/oncogenicity studies using F344 rats. The tumors

occurred at a low incidence rate
(approximately 1 percent), but did
result in the early sacrifice of most
affected animals, due to tumor size
and occasional metastases.
No sex-related trends were noted. All
tumors occurred during the second year of the
studies, were located in the subcutaneous
dorsal thoracic area (the site of microchip
implantation) and contained embedded
microchip devices. All were mesenchymal in
origin and consisted of the following
types, listed in order of frequency: malignant
schwannoma, fibrosarcoma, anaplastic
sarcoma, and histiocytic sarcoma.
The following diagnostic techniques were
employed: light microscopy, scanning
electron microscopy, and immunohistochemistry.
The mechanism of carcinogenicity
appeared to be that of foreign-body
induced tumorigenesis.

PMID: 11256750
==

These implants would be far smaller than
a heart pacemeker.

There also is a study at
http://www.homestead.com/siliconecity/files/ratstudy.htm
which finds that simple smoothness of an inert
implanted surface seems to facilitate tumor growth.

It is possible I was recalling "flatness" instead of
"smoothness" in my previous post.

In any case, there are dozens of studies showing that
just about anything nonbiological that is implanted
increases the incidence of tumor formation, sometimes
after years. Search for "Foreign body tumorigenesis"
or "shrapnel muscle" on Google.

I wouldn't have anything implanted in a pet or
child unless the alternative was death or serious
illness. Why not just play with the child or
keep an eye on it?

Actually, I think it's a good sign......  Means that more amateurs are
communicating by radio than by computer.

Hi,

I am looking for a DDS VFO based on the AD9850 and the PIC 16F84 with
LCD module (for my QRP transmitter). The more features the better.

Any ideas, suggestions etc. are welcome.

-Thanks in advance
VU3BIP

FS Yaesu FT-2400H 2 meter FM Transceiver

This radio is truly mint and has had VERY little use. I bought it new for my son, who never really carried on with ham radio. I am asking $195 and will ship it within the continental US.

Thanks and 73,

Jim K9RII

Since there is no such thing as an ominidirectional antenna
You must always calculate based on best performance
of that antenna as a directional source. I have seen dipoles
that had upwards of 20db gain in a given direction. That's
a lot of power. So once you have compensated for
possible gain. Use the inverse square law to find where the
distance that drops the power below 50mW and that should
be safe.

I'm engaged in a balloon project that'll be transmitting location coordinates via CW. However, I'm very new to AR, and have yet to even take the test (next weekend). I'm still debating what frequency and power output I'd need, and I was hoping to ask for some more experienced advice...

In a nutshell, I want to be able to hear CW when it's transmitting from only 5,000 ft and up to 40 miles away. I believe this would still be line of sight...

My first "guess" is to use the 6m band with a power output of atleast 1 watt. Does anyone have any better suggestions of advice to offer? Cost and weight is another issue... hopefully, whatever transmitter I use would ideally be under 1/4 lbs.

Also, whatever freq and power I'd end up with, it'd be 'nice' to have
a COTS PC-board type transmitter, but I'm not scared of breaking out
my soldering iron either.

Thanks in advance for any responses...
Dave

Hi:

I have no interest in radios, but I work in a group home for adults, and one of the residents is very interested in them.
At a ham fest, he just bought an old Icom IC-22a. He said it was just like his dad's. He says its a 2-meter, with crystals.

3 Questions:

1. how old would this be, approximately?

2. what size power supply should he use (assuming it even works!)

3. is there any other newsgroup where this question would be better asked?

(I went to the ICOM website, but couldn't find any info, even in the old archives section.)

Thanks!

abc@def.con1   (fake)

I

Your e-mail address is no good (mine too -- hi hi)

First: The buyer must have an Amateur radio license to transmit on the air with this
radio,
See URL for how to get a license   http://www.arrl.org/hamradio.html
Receiving only is OK

Second: Some educated guesses.

These were probably manufactured in the late 70's to early 80's

Current draw on receive only is probably less than one ampere

Current draw for a 10W radio in transmit would be around 3 amperes, so a 5 amp supply or higher should be safe enough, however a better way is:
Hook it up to your car battery and put in an ammeter in series with the battery lead, key it up with a 50 ohm dummy load or matched antenna connected to the IC-22A Antenna connector. Then read the current. Do not key it up without the dummy load or a good matched 2M antenna -- damage to the radio can occur. Testing With a matched antenna, a licensed Amateur must be conducting the test.

rec.radio.amateur.equipment is a better news group to ask about equipment.

anon to avoid spam, junk, hate and flames--

Hello Dave

With the data given here is some food for thought.

Tx power of 1w = 30dBm, 1/2w = 27dBm, 1/4w = 24dBM, and so on (halfing the power = -3dB, doubling the power = +3dB.

40 mile Path loss @ 52.5MHz = 103dBi, @ 146MHz = 112dBi, and @ 445MHz = 122dBi.

A receiver with 0.2uv sensitivity = -121dBm.

I haven't run the numbers, however I believe your assumption that 40 miles at 5000 feet is line of sight, and is assumed for the following discussion.

RF engineers consider a link with 20dB margin to have a link reliability of 99.9%, and 30dB margin yields 99.99%.

Using the 52.5MHz numbers we sum your Tx power of 30dBm and Rx sensitiivity of -121dBm to get the total system gain of 151dB. The path loss is 103dBi, so your margin is 48db - well in excess of the 30dB for 99.99% reliability. These numbers assume 0dBi antenna gain and must be adjusted for any antenna and feedline gain or losses.

If you wish to consider the 2m or 70cm bands here are the path loss numbers.
At 146MHz the path loss is 112dBi, at 445Mhz it is 122dBi.

Path margin at 2m is 39dB [(30dBm +121dBM) + (-112dBi loss)] = 39dB, at

445MHz the margin is 29dB (using that 1w transmitter).

Antenna gain is much easier to obtain as the frequency increases, and may allow
you to reduce your Tx power to around 100mw and still achieve adequate margin
for a very reliable link.

Regards, Hugh KF6HHS

>   2. what size power supply should he use (assuming it even
> works!)

I went to www.rigpix.com where I clicked ICOM, then Mobile VHF/UHF. This brought up a list that included the IC-22a. I clicked on that and got a screen about the IC-22a

When you say "what size power supply" you're talking about two parameters-- the voltage it delivers, and the amount of current it can deliver at that voltage. The required voltage for the IC-22a is 13.8 volts dc. (In an automobile with a nominal 12-volt battery, the alternator delivers 13.8 volts.) To run this as a "base station" (i.e., not in a car) you'll need an external 13.8 v power supply. The rigpix site was silent on the current requirement, but given that the rig outputs 10 watts of power on transmit it probably would need to draw about 30 watts from its supply-- at 13.8 volts that would be about 2 1/2 amperes of current, so it need not be a "husky" power supply (although a husky one would work).

It draws considerably less power for receiving; a "wall-wart" supply would probably power it OK for receiving. (And might seem to be powering it for transmit if you switch it to LOW power (1 watt output), although the transmitted signal would probably have a lot of hum on it if powered by a wall-wart.)

The rigpix site was silent on the age of the rig, but I think they stopped making crystal-controlled rigs sometime in the '80s.

Does your friend realize that he needs an Amateur Radio license from the FCC to transmit with this? (Receiving is perfectly okay without a license.) He could transmit on the 2-meter band with a Technician class license-- the lowest class, requiring a fairly simple written test and not requiring any knowledge of Morse code.

He'll also need an external antenna (and microphone for transmitting).

You could probably get help by hooking your friend up with a local ham radio club. Go to www.arrl.org, click CLUBS, and follow the prompts to find clubs within x miles of your zipcode. (ARRL = American Radio Relay League, the umbrella organization for hams in this country.)

Good luck,
(and don't hesitate to come back with further questions)
Gerry

I saw somebody on here had a site devoted to modifications for GMRS
walkie talkies. What sort of stuff can you do with those
modifications?

I looked at the brochure and obviously its a 2 meter Walkie talkie
that has a heck of alot more frequencies than any meere mortal can
desire. My questions is,. can it broadcast on police and callphone
freuencies or just scan? I don't want to accidentally broadcast on
any illegal frequencies. Is there something that just has 2 meter
sort of a VX-5 junior?

The VX-5 transmits on the 6 meter, 2 meter, and 70 cm ham bands only,
as supplied. It will not transmit on any illegal frequencies without
(also illegal) modifications. It will receive over a much wider range,
with cell phone reception blocked by legal requirement.

Anyone with a Technician or higher class license can use this out of
the box without any legal problems.

Yaesu, as well as Icom, Kenwood, and all the others make a variety of HT's covering single, dual, triple, and quad bands.

Happy trails,
Gary (net.yogi.bear)

Nothing legal. For all non-amateur bands, modifications will void the type acceptance requried for legal usage. Hams are allowed to make modifcatiosn for use on ham bands, and are supposed to know what they are doing with them.

In one post you are concerned about being legal, in another you are not concerned at all. You may want to learn a little more before the FCC gives you an expensive lesson.

Happy trails,

Thats what I'm working on now, the license. About how far will each
band reach? I'm going tobe on the road for a few trips and I just
ordered a set of GMRS radios from Midland. I'm wondering if they will
be powerfull enough to transmit between vehicles. Also I just
discovered how expensive the two meter and six meter radios are.

GMRS also requires a license. No test, just a form and a fee. One
license will cover all members of a household. Cannot be used in
Canada, IIRC. They claim UP TO five miles, in the real world, figure
up to two miles.

6 meter can go for considerable distances in the right atmospheric
conditions, somewhat past the horizon most of the time. 2 meter and 70
cm are more or less line of sight, but there are many repeaters which
can dramatically extend that range. Direct, several miles is quite

possible. With a repeater, dozens of miles. Each person transmitting will need a license.

Multi-band ham radios are more expensive, but you can find 2-meter-only handhelds for under $100 (go for at least 4 watts) and mobiles for not much more.

Any handheld used inside a car will be limited by the metal body of the car. Cars with metallized window coatings will be even worse. Ham radios allow for an external antenna which avoids this.

Happy trails,
Gary (net.yogi.bear)

Depends on what's in the area. I have a local repeater that is linked with other repeaters throughout the state. I can sit in my living room and talk all over NJ and to hams in PA and NY. On 2 meters, most hams operate on repeaters, which give a much farther range than you'd get by operating simplex.

The GMRS radios will work fine between vehicles. You can get a single band 2 meter used handheld for $50 or less depending on the model. The VX-5R would be

a bit overkill for you at this point.

Thanks Rucks,

I am in India. So any design ideas with PCB layout and the "hex" file
for the PIC would be helpful.

Well, the problem is the GMRS license is valid where I live if I
understand correctly, so if I get the license I can only use it around
home which is pointless. Unless I read it wrong. What about people I
want to use the radios with? A friend? Will he have to get the
license as well? Or does it cover others in my party?
You mentioned 2 meter handhelds, I was thinking the VX-5 is overkill
to... especially once I saw the $200 price tag. What would you
suggest in that area? Thanks!

For info on GMRS:
http://www.gmrsweb.com/gmrsfaqa.html

I am not aware of any location restriction for the current GMRS licenses, with the exception of them not being valid in Canada.

All members of your "immediate family" are covered by your license. Friends would need their own licenses. I didn't make the rule, just passing it along.

I have the Yaesu VX-150, a very impressive 2 meter handheld in the $100 range.

Happy trails,
Gary (net.yogi.bear)

Is anyone familiar with suppliers for PC-board based FM transmitters in the .5W+ range, in either the 2m, 1.25m, or 73cm bands? I have seen hamtronics products, and was impressed... but I was bargin hunting and was hoping to find a potentially more economical buy.

Thanks!
Dave

I understand... Looks like that license might end up being 'optional'
for me... I sure can't have my friends pay $20 to talk to each
otuyer...
FRS doesn't have the range I'm looking for. GMRS licensing is too
strict, and the 2 meter is ultra strict. Oh well. I'll use me old
pair of CBs until I figure it out.

>

VX-150. I'll check it out. Thanks.

Actually you know what? This is getting expensive... I think I'll
just go with the best pair of GMRS radios I can find... if my friends
and I get seperated, they can find their own way to the beach. Just
keep driving east guys... you'll hit it eventually!

For the one trip, it is a significant expense and time investment. If
you plan to use them many times, less of an issue.

Give every car a good highway map and set of directions, and use FRS
radios to coordinate stops and such, but since everyone has the
directions, staying together is less vital.

Happy trails,

Ever used MURS radios? Multi-use radio service. There are 5 channels in the 150mhz area opened up for general public use. 2 watts maximum, which isn't a lot, but with an external mag mount antenna it should carry a few miles. We got about 1.5 miles in a non scientific test from 2 handhelds one evening. Oh, and no license necessary. For some info, go here:

http://www.provide.net/~prsg/murs_faq.htm

I'd definately go with a cheapie mag mount antenna, using the handheld's antenna in the car will take your range down significantly.

Ben

The Icom site has many manuals for current and recently discontinued
models available for download.

http://www.icomamerica.com/downloads/manuals.html

Not the model you want, which appears to be a bit older, like the 80s.

A bit of time with Google should get you something.

Happy trails,
Gary (net.yogi.bear)

Thats true... I'll drop maybe 60 bucks for a pair of GMRS radios,
tomorrow is a different trip, the beach will be some other time.
Either way, Its not that important.

I am looking for a "Kenwood TS-950SDX" built in POWER SUPPLY in GOOD
working order and will pay a good price in cash.

My choices are in the following order:

1. X Type -(120/240VAC)

2. M Type -(120/230VAC)
3. T Type -(220/240VAC)

FS: Like New Icom IC-775DSP

This radio was a backup to my IC-781 and has had very little use. It looks like a new unit. The serial number is 01637 and it has at least one optional filter and one other optional accessory (the high stability crystal oscillator, I believe). I am asking $1995, shipped in continental United States. Thanks and 73!

Jim K9RII

**

FEDERAL LAW VS. HAM RADIO: THE CONFUSION OVER HIPPA

A new federal healthier law with the acronym HIPPA is affecting Amateur Radio. Bruce Tennant, K6PZW, takes a look at the recent implementation of the Health Insurance Portability and Accountability Act and its impact on the hobby.

--

If you are a ham with a disability and are a member of a group any other organization that has knowlege of your problem, then listen up. In order to continue receiving most benefits from such a group you are now required under Federal law to fill out and return the new Health Insurance Portability and Accountability Act privacy guidelines forms that you may have already recieved or will recieved from each group.

Its the Federal government that requires the paperwork, and signing it will allow groups that must disclose disability information in the course of routine business to continue to serve you. For hams with disabilities it means that groups like the Handi Hams can continue to provided direct assistance with license renewal or license changes, publish news of individual license upgrades, and even send a birthday greeting by the ham radio's National Traffic

System.

What about individuals who do not sign the forms? They will still be able to receive some services offered by these groups, but limited to those which do not involve releasing information about their physical condition. However, in the case of the Handi Hams, a disabled ham could no longer be connected with the groups assistance community of other members and volunteers because of the new federal privacy regulations.

For the Amateur Radio Newsline, I'm Bruce Tennant, K6PZW, in Los Angeles.

--

Full information on the Health Insurance Portability and Accountability Act is on-line at http://aspe.hhs.gov/admnsimp/ (Tnx HandiHams, others)

**

INTERNATIONAL: 40 METER CHANGE LOOKS GOOD

ARRL Executive Vice President Dave Sumner, K1ZZ, says that prospects for a harmonized worldwide 40 meter ham band are starting to look good. Speaking at a recent Dayton Hamvention forum, Sumner says it may all hang on what the United States proposes for the upcoming World Radio Communications conference later this year:

--

Sumner Here

--

Even if a large number of delegations come up with similar proposals, Sumner says that caution is still the by-word until all the voting has been done:

--
Sumner Here
--

You can hear more of what Dave Sumner has to say regarding 40 meters and other issues on this weeks RAIN report. Its in streaming audio at www.rainreport.com. Those without web access can her it by dialing up 847-827-RAIN. Thats 847-827-7246 (RAIN, ARNewsline™)

**

HAM SPECTRUM: 5 MHZ SPOT FREQUENCIES AVAILABLE MIDNIGHT JULY 3

LOOKING FOR SOMETHING NEW IN HAM RADIO? WELL, HERE'S NEWS JUST IN FROM THE FCC AND THE ARRL. I'M ROY NEAL, K6DUE, WITH A LATE BREAKING STORY THAT HAMS HAVE BEEN WAITING A LONG TIME TO HEAR. 60 METERS. 5 MEGAHERTZ …SOON WILL BE AVAILABLE WITH

5 CHANNELS FOR YOUR PLEASURE AND INVESTIGATION. A SECONDARY FIVE CHANNEL DOMESTIC HAM RADIO ALLOCATION WILL BECOME AVAILABLE STARTING AT MIDNIGHT, THURSDAY THE THIRD OF JULY.

FEDERAL GOVERNMENT USERS ARE PRIMARY IN THE 5 MHZ BAND. AMATEURS GET FIVE CHANNELS, 2.8 KHZ WIDE, WITH CENTER FREQUENCIES OF 5332, 5348, 5368, 5373, AND 5405 KILOHERTZ.

GENERAL AND HIGHER CLASS LICENSE HOLDERS WILL BE PERMITTED TO OPERATE UPPER SIDEBAND PHONE, WITH A MAXIMUM OF 50 WATTS EFFECTIVE RADIATED POWER.

USERS ARE BEING ADVISED TO SET THEIR CARRIER FREQUENCY ONE AND A HALF KILOHERTZ LOWER THAN THE CHANNEL CENTER FREQUENCY. THE ARRL ALSO SUGGESTS RESTRICTING AUDIO BANDWIDTH TO 200 HERTZ ON THE LOW SIDE AND 2800 HERTZ ON THE HIGH END TO KEEP THE TOTAL BANDWIDTH WITHIN THE 2.8 KHZ IMPOSED BY THE FCC.

THE REPORT AND ORDER GRANTING THE NEW SPOT FREQUENCY ALLOCATION AT 5 MEGS WAS PUBLISHED IN THE FEDERAL REGISTER ON JUNE THIRD. LOOK FOR LOTS MORE ON THE SUBJECT IN THE NEAR FUTURE HERE ON THE AMATEUR RADIO NEWSLINE.

NORM. (ARRL, FCC)

**

INTERNATIONAL - SOLOMON ISLANDS: LICENSING CONFUSION

Meantime, in the Southern Hemisphere, some questions and some possible answers regarding the confused state of ham radio licensing in the Solomon Islands. Q-News Graham Kemp, VK4BB, has the details:

--

Sam Voron, VK2BVS, spoke to QNEWS from an Internet kiosk at Dubai airport. Sam was en route to Somalia, but paused just long enough to answer a few rumors regarding the Solomon Island H44 prefix licenses.

According to Voron, there had been no way for people to get a license in the Solomons because there are no exams there. So in 2002 the H44 national radio regulatory body called Spectrum printed 21 novice licenses with the call signs chosen by students at a radio school. These are people took the Unrestricted level license class of ham radio training.

But Spectrum said that it first wanted to issue Novice licenses because it felt new operators should start with an entry level ticket before moving on to a full license. But Voron admits that at least two of these licenses may have been issued with Unrestricted privileges.

According to Voron, the Secretary of the H44 national ham society has now drawn up an Unrestricted exam. Students not happy being forced into the novice license when they spent 6 months studying for the Unrestricted will be able to take the exam. If they pass, they will go directly to the Unrestricted instead of the Novice class operating privileges.

In further news just in and unsubstianted as yet, the real exam is ready. Spectrum has directed the candidates to sit for it. The school and candidates are said to be dealying because they are frightened that it may be to hard.

For the Amateur Radio Newsline, I’m Graham Kemp, VK4BB, of Q-News, down-under, in Brisbane, Australia.

--

No matter when that first upgrade test is held, it appears as if a method is at least now in place for native born Solomon Islanders to take an Amateur Radio exam. (Q-News)

FCC: KILLS RULES FOR LIGHTING DEVICE EMISSION LIMITS AT 2400-2500 MHZ

Remember a few years back when hams became very worried about degradation to the 2 point 4 Gigahertz band? This, after the FCC adopted a First Report and Order that relaxed the emission limits for R F lighting devices.

That was on June 9th of 1999 and at that time the Commission deferred to a future date action on changes to the rules to permit such devices to operate from 2400 to 2500 MHZ.

Now, with no apparent remaining interest by the lighting industry to produce RF lighting devices in that spectrum, the FCC has decided to forego any further rule change. Well, at least for the moment it has.

The whole story is at http://hraunfoss.fcc.gov/edocs_public/attachmatch/FCC-03-123A1.doc on the World Wide Web. (CGC)

**

RADIO LAW: FCC ACTS TO EASE MEDIA OWNERSHIP RESTRICTIONS

Federal regulators have acted to relax rules that restrict media ownership. The change will permit companies to buy more broadcast properties and own a newspaper as well as a radio or television station in the same city.

On Monday, June 2nd the Federal Communications Commission announced that it voted 3 to 2 to adopt a series of changes favored by media companies. It now says that a single company can now own TV stations that reach 45 percent of United States households instead of the previous 35 percent limit. The agency also eased rules governing local TV ownership so one media conglomerate can own two television stations in more markets and up to three stations in the largest markets like New York or Los Angeles.

More controversial was a decision to end an age-old ban on joint ownership of a newspapers and broadcast stations in the same city. The revised rule lifts all 'cross-ownership' restrictions in markets with nine or more TV stations. Smaller markets still face some limits and cross-ownership is still banned in city’s and towns with three or fewer television outlets.

And even these rule changes are expected to face court challenges. Some media companies already indicate wanting more wide spread deregulation. Meantime consumer advocates will be seeking to reverse the deregulatory trend in favor of more local control over the print and broadcast media.

Not approached in this latest round of broadcast deregulation was the subject of direct foreign ownership of U-S broadcast properties. Currently foreign entaties and governments are banned from such ownership. But over the years there has been intensive lobbying by foreign interest groups to do away with this ban which requires an act of Congress to lift. Most annylists say its not likely to happen in the near future. (Published news reports)

**

ENFORCEMENT: LOCAL CHARGES FILED AGAINST OHIO CB OPERATOR

Complaints from a group of neighbors experiencing interference on household appliances from phones and TV sets to baby monitors have resulted in a court case against a citizens band radio operator. Amateur Radio Newsline’s David Black, KB4KCH, takes a look at a most interesting case:

--

On the CB airwaves, he's said to go by the name Sugar Bear. James A Disbennet, of Lancaster, Ohio, faces first degree misdemeanor charges of operating a CB radio exceeding 4 watts. He also faces two counts of operating a CB radio without certification. The Lancaster Eagle Gazette says Disbennet was released on bond after answering a summons in Fairfield County Municipal Court May 20th.

The Lancaster City Council was the first such group in the U-S to pass an ordinance allowing the City to enforce rules set by the FCC governing the strength of CB radios. On April 10th, an assistant superintendent of the City's Electrical, Communications and Signals Department went on a transmitter hunt. The interfering signals were traced to Disbennet's home. The City then obtained a search warrant, with Lancaster police serving the warrant the following day. Officers seized four pieces of CB radio equipment worth more than a thousand dollars.

A trial date has yet to be set. If convicted, Disbennet could be hit with a 1,000 dollar fine and 180 days in jail.
For the Amateur Radio Newsline, I'm David Black, KB4KCH.

--

According to the law under which Disbennet was charged, the definition of CB radio "includes all private, two-way, short-distance voice communications service for personal or business activities of the general public. Citizens filing complaints must keep an accurate log of the interference for a minimum of four weeks and there has to be more than one complainant in order to file charges. The only exclusions to the law are for emergency communications services like police, fire and FCC licensed radio amateurs.

The complete story is in cyberspace at http://www.lancastereaglegazette.com/news/stories/20030521/localnews/339596.html. (N6RU)

**

ENFORCEMENT: FCC WITHDRAWS LETTER IN ENHANCED SSB OPERATION

Remember a stir created on April 3rd the FCC sent advisory letters several hams who run enhanced or so-called high fidelity single sideband? The FCC told those operating the mode that the agency had received complaints from other radio amateurs alleging that the enhanced mode transmissions were using bandwidth wider than necessary. The FCC termed this as being contrary to good engineering practice.

One of those hams receiving such a notice was Anthony G. Latin, W4NSG, of Ocala Florida. Now, a month later the FCC has withdrawn its original letter to Latin, stating that it was issued to him in error. The regulatory agency also apologized to W4NSG for whatever inconvenience that letter may have caused him. No specific reason for the withdrawal of the letter was given. (FCC)

**

ENFORCEMENT: FCC ISSUES ANOTHER ENHANCED SSB WARNING

But its not over yet. This is because the FCC has issued another ham a similar warning regarding the use of enhanced SSB on the Amateur Service bands.

The May 12th letter went to Tyler Stampfli, KA0KA. Like those issued back in April, it tells the La Grange, North Carolina ham that use of enhanced Single Sideband emission with a bandwidth wider than necessary is contrary to good engineering practice. It also notes that no spectrum in the Amateur Service is designated specifically as “wideband audio” frequencies, either by Commission rule or in any informal band plans.

The FCC did not cite Stampfli. It did however request that he fully review the relevant Amateur Service rules and to make certain his station conforms to them. Also that he operate in the best interests of the Amateur Radio Service as a whole. (FCC)

**

ENFORCEMENT: BIG CELLULAR FINE

The FCC has issued Western Wireless Corporation and WWC Holdings two Notices of Apparent Liability to Monetary Forfeiture in the amount of $200,000 each. The companies are the licensee of Cellular Radio Station KNKN343 in North Dakota. The FCC says that the the companies are operating radio transmitting equipment from an unauthorized location resulting in the first fine.

The second $200,000 is the result of what the FCC says was Western Wireless for operating radio transmitting equipment from another unauthorized location. The two NAL's wewre issued on May 5th and the companies were given the customary time to appeal.

More is on the web at
http://hraunfoss.fcc.gov/edocs_public/attachmatch/FCC-03-109A1.doc and
http://hraunfoss.fcc.gov/edocs_public/attachmatch/DOC-234290A1.doc (FCC)

**

HAM RADIO AND THE LAW: CA HAM FILES FOR COURT COSTS

Mark Abrams, WA6DPB, the ham who recently triumphed over the city of Rancho Palos Verdes California in an antenna zoning case is headed back to court. In an e-mail to Amateur Radio Newsline, Abrams says that his attorneys have recently completed our briefing in the 9th Circuit Court of Appeals on the issue of damages. Abrams says that he is now waiting for a court date which he expects will be around the end of August or early September. After the hearing, Abrams says that he expects to wait another 60 days for a written decision from the Court. If the Court decides in his favor he wins the right to have another trial on the amount of attorney's fees, court costs and damages. If he looses Abrams says that it will be unlikely that he will take the matter of reimbursement for his legal fees any further. (WA6DPB)

**

BREAK 2

This is ham radio news for today's radio amateur. From the United States of America, We are the Amateur Radio Newsline with links to the world from our only official website at www.arnewsline.org and being relayed by the volunteer services of the following radio amateur:

(5 sec pause here)

**

CHANGING OF THE GUARD: FRANK SCHWAB, W8OK, - S.K.

Some sad news to report. The changing of the guard in ham radio continues. This with word that Frank Schwab, W8OK, has passed away.

As we reported last week, Schwab, who helped to craft the Dayton Hamvention over a half century ago suffered a heart attack a few hours prior to this years event. At the time, the 77 year old Schwab was also fighting cancer and several other ailments.

While best known for his work in creating the Hamvention, W8OK was also a world-class D-X’er and heavily involved in public service activities. Services were held Monday June 2nd at St. Christopher's Church in Vandalia, Ohio. A page long tribute to Schwab appeared recently in the Dayton Daily News. (W8ILC)

**

TIME TO RETIRE: WISCONSIN SCHOOL CLUB GOING QRT

After over 25 years in operation, Andrew Martin, KB9ZLL, reports over qrz.com website that the Fond du Lac, Wisconsin High School's ham radio club is dissolving. This, due to the retirement of it's trustee Jeffry Hoeft, K9NC.

The club had its beginnings in the old high school building in 1972. Back then it consisted of a wire antenna and CW transciver. Today the group has operations on the high frequency bands as well as two meters and 440 Mhz. More important, the Fond du Lac club has been responcible for the licensing of nearly two dozen new hams over the years it has operated. (KB9ZKK, QRZ.COM)

**

NET NEWS: NEW ECHOLINK VHF CONFERENCE

Ron Pastterson, W6FM, reports the creation of a new conference on Echolink devoted to the discussion of all aspects of VHF and UHF weak signal operating. The name of the on-line gathering is *VHF_TALK* and it was created to assist in coordinating skeds, discussing band openings and anything else related to operations in the world above 50 Mhz.

For those who aren't familiar, Echolink is a voice over I P system available to licensed amateurs. For more information on it and the new conference take your web browser over to www.echolink.org. Ron adds that the conference will hopefully soon be avail over the world wide Internet Repeater linking Project as well. Information on IRLP is in cyberspace at www.irlp.net . (VHF Reflector)

**

ON THE WEB: AMATEUR REPEATER BUILDERS HOME PAGE GOES QRT

The Amateur Repeater Builders Home Page appears to have gone QRT and its owner is blaming the attitudes of some hams for its demise. In a posting to the website, its administrator says in part that due to an unfortunate series of events resulting from this groups actions the Amateur Repeater Builders Page page will no longer be maintained.

Whats involved appears to be a dispute over universal recognition and acceptance of the the Northern California Amateur Radio band plan and what the board administrator terms as intentional interference to coordinated 420 links with an ATV transmitter. He says that the FCC's lack of time and/or interest in addressing the issue has caused him to become thoroughly disgusted and that he is -- quote -- ‘Gone fishing!’

But all might not be lost. Kevin Custer, W3KKC, says that he plans to contact the Amateur Repeater Builders Home Page owner to try to obtain the rights to the website and host it himself. He says he will let everyone know what happens over the Yahoogroups based Repeater Owners remailer. (W3KKC, VHF Reflector)

**

RADIO PICTURES FROM SPACE: THE EARTH FROM NEAR MARS

NASA's Mars Global Surveyor spacecraft turned away from the red planet for a while on May 8th and took a unique picture of Earth from Mars-orbit. This first-ever image of its kind not only shows our home planet as a tiny alien world in the vast darkness of space, but also includes Earth's moon and a view of the giant planet Jupiter. Go see http://science.nasa.gov/headlines/y2003/22may_alienearth.htm?list913324 for more. (NASA)

**

INTERNATIONAL - CUBA: FIRHAV 2004

Oscar Moroles, CO2OJ, says that the Federation of Radioamateurs of Cuba is organizing an international gathering of hams to be held next March. Called FIRHAV 2004, it will include sessions on all aspect of operation used on the bands above 50 Mhz including the new digital techniques. More information about FIRHAV 2004 and how to participate is on the web at http://frc.co.cu (CO2OJ)

**

ON THE AIR: COOKEN IN JUNE

Turning to on-the-air operations, the Central Ohio Operators Klub Extra - Novice is sponsoring special event station WW8OH June 21st 1200 to 2000 UTC. This, to coincide with the Ohio Department of Natural Resources Cranberry Bog open house.

Look for WW8OH in the General portion of the 40m band and QSL as directed on the airr. More inforrmation is at www.cooken.org and the word Klub is spelled with a “K.” (E-mail)

**

DX

In D-X, word that a group of five Greek operators will sign SX9G from Gavdos Island through the 15th of June. QSL via SV2DGH. (GB2RS)

**

THAT FINAL ITEM: THE OWLS ARE BACK

And finally this week, its time to get ready to T-Hunt down those ever elusive Burrowing Owls. And this year there's another creature to look for -- bats. Heres Joe Moell, K0OV, with all the details:

--

For five years, ham operators and scanner listeners in western states have monitored VHF frequencies to help researchers in Saskatchewan and Washington state study the migratory behavior of Western Burrowing Owls, a species of concern. Now three more monitoring projects are beginning, and this time we need volunteers in south-central and southeastern states.

A biologist at the University of South Florida at Tampa (USF) is studying Florida Burrowing Owls. That's a slightly different subspecies from the Western Burrowing Owl. It is thought that their range is limited to Florida and the Keys, but there is one 40-year-old report of a sighting in North Carolina. Researchers have banded the legs of these birds in the past, but none of the banded owls have been recovered after leaving their Florida homes.

For the new study, some Florida Burrowing Owl chicks are being radio-tagged right now. Local researchers are tracking them as they leave their nests, learning to forage. In the summer, the young owls are expected to take off for parts unknown. USF wants volunteers throughout the southeast to listen for the VHF radio tags in an attempt to determine their routes and final destinations.

That's project #1. Number two involves Mexican Long-nosed Bats. For about a month beginning in mid-June, Bat Conservation International wants volunteers to join a team that will track their movements in and around Big Bend National Park in Texas as they pollinate century cactus plants. Physically fit hikers are especially wanted, but a few vehicle-based monitors will also be helpful. And there may be opportunities for some home monitors. Hams with VHF radio direction finding equipment are particularly needed.

Project #3 is a study of orphaned Great Horned Owls. It's being done by the Heard Natural Science Museum and Wildlife Sanctuary in McKinney, Texas, along with the University of North Texas. After being raised at the sanctuary, up to two dozen of these owls will be released into the wild this summer, with radio tags attached to help determine their dispersal patterns and survival rates. Volunteers are needed to monitor for the radio tags, especially in the Denton and Collin County areas. Great Horned Owls are territorial and do not migrate long distances.

My Web site on radio direction finding carries the latest details, frequencies, and contact information for all three projects. Point your browser to www.homingin.com HomingIn is one word --- homingin.com

Thanks in advance for your help! From southern California, where Burrowing Owls are diminishing but still can be seen in the farmlands, this is Joe Moell, Kay-zero-oscar-victor, for Amateur Radio Newsline.

--

Again, that website is www.homingin.com. (K0OV, ARNewsline™)

**

NEWSCAST CLOSE

With thanks to Alan Labs, Amateur News Weekly, AMSAT, the ARRL, the CGC Communicator, CQ Magazine, the FCC, the Ohio Penn DX Bulletin, Radio Netherlands, Rain, the RSGB and Australia's Q-News, that's all from the Amateur Radio Newsline(tm). Our e-mail address is newsline@arnewsline.org. More information is available at Amateur Radio Newsline's(tm) only official website located at www.arnewsline.org. You can also write to us or support us at Amateur Radio Newsline(tm), P.O. Box 660937, Arcadia, California 91066.

Before we go, we want to tell you that a talk by our producer Bill Pasternak, WA6ITF, dealing with the problems facing ham radio and some possible solutions is this months Newsline Extra audio feature. The presentation was recorded at the 2002 Joplin Hamfest banquet and is available as an MP3 file on the same webpage where you find the weekly newscast. Go to www.arnewsline.org/quincy and click on ARNewsline Extra at the bottom of the page.

For now, with Bill Pasternak, WA6ITF, at the editors desk, I’m Norm Seeley, KI7UP, saying 73 and we thank you for listening." Amateur Radio Newsline(tm) is Copyright 2003. All rights reserved.

Looking on ebay for an old hf transceiver. I am intrigued by the old ones and they are normally in my budget. I am looking at old kenwood, atlas, and heathkit. Are crystals still available and are the parts relatively easy to find. Some of these radios were make in the 60's but a transistor is a transistor . . . correct?

Thanks
Greg Doughty

I am using a 2m ht now but would like a base rig.

I am working on an application where I must receive RF through earth. I know that, with respect to RF attenuation, not all earth is created equal. But is there some standard that gives something like dB attenuation per centimeter of earth? If this figure exists, how is it affected by frequency?

Thanks ahead of time for any information you might be able to provide.

I am heading from Eastern Washington to Iowa and back via I 90.
I am looking for a listing of repeaters along the route. I have both VHF and
UHF and am leaving this Saturday.

Since RF requires a ground plain as part of the
equation and the earth is a ground. It is highly

unlikely that your application could ever work.
Perhaps you should start looking at neutrinos
as to solve your problem.

www.artscipub.com/repeaters

You'll find a listing of all repeaters in a state, by town. It's up to you to determine which are accessible from your route.

No... you'll have to start from scratch again, but the CW needed is only 5wpm
(for any class). You may be able to get your old call back under the vanity
call program, once relicensed.

I have not been able to fine any for this radio. Is it not capable of
being programmed using a computer control program? With 800 channels,
I was hoping I could find a package..

Hi there,
Can anyone out there with a 741help me identify the pin outs on the modular plug.

Alternatively do you have a cheap fist mike for this radio.

Thanks

Looking into the connector on the radio, from left to right:

    Up
    8VDC
    Ground
    PTT
    Ground
    Mic
    Rx audio
    Down

Ground, Mic and PTT are what you need for a different mic.

Carl.

I did see your next message and will have to try and find a callbook from that
time period at the library. I'll have to try for ~1977 'cause I believe that's when
I was a novice or a tech.

Thanks for the tips/info Gerry. I'll try some of the tests and code practice stuff
found on the net to see where I rate. If everything looks OK, its off to a VE.

Tom

I don't think libraries hold on to old ones.

The ARRL "Grandfather" page mentioned in my other message relates how to get a copy from the Callbook people. But that may no longer work-- the Callbook people went out of business a few months ago.

The QCWA (Quarter-Century Wireless Association) has a full complement of old callbooks, which they use for verifying that an applicant was indeed licensed a quarter-century ago. You might visit them at www.qcwa.org and inquire whether they can provide the copy you need, perhaps for a fee.

I'M LOOKING TO BUY A FEW MIDLAND RADIOS
MODEL# 70-565B, OR 70-530A.
THE RADIOS MUST BE CAPABLE OF GOING DOWN TO THE 430 MHz PORTION OF THE BAND.
MUST HAVE MICROPHONE AND MOUNTING BRACKETS.

IF YOU HAVE ANY OF THESE RIGS, EMAIL ME WITH THE CORRESPONDING DETAILS.

>   How would you meet the identification requirements?

I'd think that setting the access point's SSID to my callsign would work.

>   What about WEP or other encryption protocols?

It's encryption, so is probably not going to be allowed.

>   How would you reach that kind of a power level?

An amp? :) :)

>   Home brew something? Linear amp?

I believe that anything over 10 watts requires some sort of control circuitry (I can't remember the name of it off the top of my head). There are plans and info on the web. A google search for "13cm amplifier" ought to be a good start.

Hello All!

I have a problem I'm hoping someone can help me with.

I have a Kenwood TS-140S that seems to have a transmit problem. I think its the Microphone but I'm not sure. My funds are VERY limited at the moment so I don't want to buy a mike unless I'm sure thats the problem. I try to transmit and see no output on the meter. When I tap on the mike I see the meter deflect, or if i tap the mike the meter deflects with the taps. I checked all the connections and they are fine (Inside the mike also). If I whistle I also see the meter deflect for a second. The radio was fine and then this started the other day. I tried the mod for intemittent TX power that i found during a search but that didnt help (and the problem isnt intermittent).

Can someone steer a financially strapped Ham with some suggestions.

Thanks in Advance!

The eCaveMan

I'm not sure I understand your symptoms/observations correctly, however, are you sure it's not working correctly? What you describe regarding whistling or tapping the mic causing meter deflection sounds fairly normal for SSB operation - i.e., no output until audio is provided from the mic.

regards,

mark

I agree with Mark, but want to take it one step further. If the problem is NOT in the SSB mode, try CW mode with the key down momentarily. Don't forget to increase the RF gain (more power) to see if the rig will give you a solid output level.

Amateur Radio Newsline™ Report 1339 - April 11, 2003

The following is a closed circuit report. Here is Amateur Radio Newsline's support fund administrator, Andy Jarema, N6TCQ.

--

For the month of February we heard from: Monthly contributors Joseph Bartzi, Jr., KC8DKF of Wadsworth, OH, and Scott Hensley of the Area Communications Team, of San Jose, CA. Total contributions were $25, with NO clubs heard from. On the other hand, our expenses were $661.

That doesn't work! We need your help to keep these newscasts on the air!

I'll make you a deal: you send whatever you can, and I will take the next few weeks to catch up on who's been helping us stay on the air over the past year.

A reminder that Am,ateur Radio Newsline™ is a federal, 501 (c)(3) non-profit corporation. All contributions are tax-deductible.

The address for the Newsline Support fund is PO Box 660937, Arcadia, CA 91066. If you missed it, it will be given again at the end of this week's newscast. I'm Andy Jarema, N6TCQ.

--

Thanks Andy. That ends the closed circuit with Amateur Radio Newsline report number 1339 with a release date of Friday, April 11 2003 to follow in 5-4-3-2-1.

The following is a Q-S-T. Australia says its time to restructure that nations Amateur Radio Service and ham radio in Iraq. These stories and more on Amateur Radio Newsline report number 1339 coming your way right now.

(Billboard Cart Here)

**

RESTRUCTURING: AUSTRALIA SAYS TWO LICENSES WILL DO

The Wireless Institute of Australia says that its time to restructure ham radio down-under and that two licenses will do. David Jones, VK4OF, reports from last weekends W-I-A Annual General Meting in the city of Adelaide:

--
Audio report only. Hear it at http://www.arnewsline.org
--

Jones' report quotes a press release from Wireless Institute of Australia President Ernie Hocking, VK1LK. We will have more in future Amateur Radio Newsline reports. (Q-News)

**

AMERICA AT WAR: BAGDHAD RADIO CLUB STATION CLOSED FOR DURATION OF WAR

Ham radio will hopefully re-emerge in Iraq after the war has ended. In the meantime, the Daily DX and the ARRL Letter relay information from Diya Sayah, YI1DZ. This, on the plight of one of that nations best known Amateur Radio operations.

YI1DZ, is one of the primary operators at the Baghdad Radio Club YI1BGD station in Baghdad. He reported that just prior to the outbreak of hostilities in Iraq that he had dismantled the station. Also, that all of the equipment is stored in as safe a place as possible.

Daily D-X Editor Bernie McClenny, W3UR, says that he doubts there will be any activity in the near future from YI1BGD or any other Iraqui Amateur Radio station. The YI1BGD club station went on the air in the 1970s and the Iraqi Association for Radio Amateurs remains an International Amateur Radio Union member-society. (ARRL, Daily DX)

**

IN THE PUBLIC LIGHT: AMATEUR RADIO AT NAB-2003

I'm Bill Pasternak, WA6ITF, in Las Vegas Nevada, where the National Association of Broadcasters Convention Amateur Radio Reception is just winding down. An estimated 700 hams involved in the broadcast profession spent the last 2 hours enjoying one anmothers company. They also heard a brief talk by ARRL Presodent Jim Haynie, W5JBP, who used the occasion to thank thee Las Vegas Amateur Radio Club for an important monetary donation:

--

Haynie: "I want to thank the members for the $1000 donation to the (ARRL) Education and Technology Fund. We think it is particularly important in as much as the Big Project as we call it -- in slang terms -- is teaching kids about Amateur Radio who will hopefully be the next engineers at your radio station or something like that. This exposure to electronics is very important to Amateur Radio and very important for industry.

So with that, have a good time , and again my thanks to the Las Vegas Amateur Radio Club for your vey wonderful and generous donation."

--

Well over 100,000 broadcasters and those in allied businesses attended the 2003 National Association of Broadcasters convention. Among them where three friends who hads not seen one another in almost three decades. They are Dick Flanagan, W6OLD, Martin Geisler, WA6TIC and this writer. All of us were members of the Palisades Amateur Radio Club back in the 1970's. Ill be back with more about this radio club after a short airplane ride home.

Annd less we forget. The N-A-B Amateur Radio Reception was again co-sponsored by Kenwood Communications and CQ Magazine.

Reporting from a quiet alcove just outside the Las Vegas Convention Center on my way to McCarren airport, I'm Bill Pasternak, WA6ITF, for the Amateur Radio Newsline. Don. (ARNewsline™)

**

Break 1

From the United States of America, We are the Amateur Radio Newsline, heard on bulletin stations around the world including the WD9AKO and K9BAR repeaters serving Bolngbrook Illinois.

(5 sec pause here)

**

RADIO LAW: HAM RADIO CC&R BILL REINTRODUCED IN CONGRESS

Another Congressional attempt is under way to provide relief to amateurs prevented by private deed covenants, conditions and restrictions from installing outdoor antennas. The ARRL Letter says that New York Representative Steve Israel has again introduced the "Amateur Radio Emergency Communications Consistency Act" into the current session of Congress. The measure, designated HR 1478, would require private land-use regulators such as homeowners' associations to reasonably accommodate Amateur Radio antennas consistent with the PRB-1 limited federal preemption. PRB-1 now applies only to states and municipalities. (ARRL)

**

RADIO LAW: CALIFORNIA PRB1-LIKE LAW TAKES A GIANT STEP

Some good news for hams living in the Golden State. ARRL Southwestern Division Director Art Goddard, W6XD, says that the California version of PRB-1 passed the Local Government Committee on a unanimous vote at its April 2nd meeting. Goddard says that the next step for A B 1228 is the full California State Assembly.

Representing ARRL at the Committee hearing were Dean Straw, N6BV and Pacific Director Bob Vallio, W6RGG. In his bulletin, Goddard took the time to thank Mike Mitchell, W6RW, Assembly member Bob Dutton and his staff as well. (ARRL SW Div. Newsletter)

**

SPECTRUM SHARING: SATELLITE-FED TRANSLATORS IN THE COMMERCIAL FM BAND

The FCC has assigned RM-10609 to a proposal by Calvary Chapel of Twin Falls and two smaller broadcasters. This, for authority to allow satellite-fed translators or Satellators in the "non-reserved" F M 92 to 108 MHz band. Amateur Radio's Bruce Tennant, K6PZW, has more.

--

As we all know, 92 to 108 Mhz is the band that is currently used by commercial broadcasters, over-the-air-fed translators and most Low Powe F-M stations. Currently, what are called Satellators are restricted to the 88 to 92 MHz band and the translator must be owned by the primary station.

But Calvary Chapel of Twin Falls and the other petitioners want the FCC to allow satellite-fed translators in the non-reserved F M 92 to 108 MHz band. The petitioners claim this proposal will have little impact on existing stations in the spectrum. This is because there is currently a freeze on new terrestrial translators in that band.

The FCC has not indicated when it might act on the Calvary Chapel of Twin Falls rules change request.

For the Amateur Radio Newsline, I'm Bruce Tennant, K6PZW, in Los Angeles.

--

So far the only major objection has come from National Public Radio. N-P-R generally supports the Twin Falls petition, but proposes that coverage distance limitations be set for Satellator operations. More is on the web at http://gullfoss2.fcc.gov/prod/ecfs/comsrch_v2.cgi (CGC Communicator)

HAM TESTING: FCC AND VEC'S TO MEET IN JULY

The 2003 National Conference of Volunteer Eximination Coordinators Conference in Gettysburg, Pennsylvania is set for July 25th. This is the annual get-together between the FCC and the Volunteer Examination Coordinators that maintain the question pools and handle all Amateur Radio testing.

Planners say that last years conference was a success and that they are looking for input for this year'a agenda. Please send any thoughts you have for this years conference to John Creel, WB3GXW. John's e-mail is WB3GXW@arrl.net (NCVEC)

**

RESCUE RADIO COMS: THE BOSTON MARATHON NEEDS YOU

If you are planning a trip to Massachusetts later this month and will have a hand held radio with you, the ARRL Letter says that the Boston Marathon can use you.

The 107th running of the event is slated for Patriots' Day, Monday, April 21st. Planners say that they still need more Amateur Radio volunteers to assist with communications for this year's event. If you want to donate your time, please contact Paul Topolski, WSEX by e-mail to w1sex@arrl.net or Steve Schwarm, W3EVE, at w3eve@arrl.net.

Once again, that's the Boston Marathon, on Monday April 21st and its looking for hams top help out. (ARRL)

**

ON THE AIRWAVES: THE LIBERAL RADIO NETWORK

Venture capitalists from Chicago are reportedly behind an effort to start a liberal leaning talk radio network. One that might offer an alternative to conservative talk show hosts heard across the airwaves these days.

The group will be called AnShell Media L.L.C.. Its backers are reportedly investing an initial $10 million. They are also hoping for assistance from like minded entrepreneurs.

With the intent to be on the air by this fall, the are talking with comedian and author Al Franken about working with the network. They also hope to attract other politically liberal entertainers and political guests as well. (ThePolicyPeport nerwsletter)

**

UPCOMING EVENTS: FIELD DAY - VCARS AT THE REAGAN LIBRARY

The Ventura County Amateur Radio Society will conduct it's Field Day 2003 operations on the grounds of the Ronald Reagan Persidential Library and Museum, in Simi Valley, California. According to Peter Heins, N6ZE, this will mark the third year of Field Day operations in conjunction with and co-sponsored by the Reagan facility. (N6ZE)

**

UPCOMING EVENTS: COMMEMORTING FRANK LLOYD WRIGHTS WESTCOTT HOUSE

The Westcott Wireless Preservation Association will be hosting special event station W8AGA on Saturday, May 3rd. The operation will taker place from Frank Lloyd Wright's Westcott house in Springfield, Ohio.

The Westcott Wireless Preservation Association serving the Westcott House Foundation by continuing radio operations at the Frank Lloyd Wright designed Westcott home. Wright designed Ohio's only prairie style house for Burton and Orpha Westcott in 1907. The house is now undergoing extensive restoration and will eventually be opened to the public as a house museum.

But in the here and now, the special event station is coming on the air. A special QSL card will be issued to any station with a confirmed QSO with W8AGA and who sends a QSL card and SASE to the Westcott Wireless Preservation Association. QSL information is on the web at www.westcotthouse.org/w8aga (Press release)

CONVENTIONS AND HAMFESTS: MILWAUKEE - A SUPER SUCCESS

On the convention and hamfest circuit, word that last weekends A-E-S Superfest in Milwaukee Wisconsin is being called a super success. A late season storm made for some fairly inclement weather but it did not dampen the spirit of the regions ham community that showed up in droves to see what was new and buy what was hot.

According to industry sources the weather may have played to the advantage of dealers by driving the crowds to the display floor. And while Friday was a bit slow, Saturday more than made up for it with lots of high tickeet items moving out. We are told that averaged out sales were pretty good on both days and nobody is complaining.

The Superfesrt is held every April and is sponsored by Amateur Electronic Supply. (ARNewsline™)

**

CONVENTIONS AND HAMFESTS: RENO NEVADA IN MAY

And word that the Spring 2003 Reno Ham Swap will be held Saturday May 10th between 7:00 AM and 1:00 PM local time. The event is sponsored by the Reno Nevada Area Metro Simplex Amateur Radio Club. For Complete Details Visit the website at http://k7xc.tripod.com/hamswap/ (Via e-mail)

**

BREAK 2

This is ham radio news for today's radio amateur. From the United States of America, We are the Amateur Radio Newsline with links to the world from our only official website at www.arnewsline.org and being relayed by the volunteer services of the following radio amateur:

(5 sec pause here)

HAM RADIO IN SPACE: BIG UK ARISS SUCCESS

Its one of the best ARISS contacts to date. This, as students at the Rushey Mead secondary school near Leicester England spent about 10 minutes talking with U-S Astronaut Ken Bowersox KD5JBP on board the International Space Station. It took place on Friday April 4th, and this is how it sounded:

--
contact audio
--

Rushey Mead is a U-K secondary school for 11 to 16 years olds. It also has an active amateur radio club. But for this special occasion, the GB2NSC station of the National Space Center was chosen for the space talk. John Heath, G7HIA operated the station. Here's more of the QSO.

--
contact audio
--

Students, teachers, parents, and the media were present as twelve youngsters asked questions about life in space of Ken Bowersox, KD5JBP.

More contact audio is at Howard Longs website. It is in cyberspace at http://users.skynet.be/fa059641/2003_04_01.htm (ARNewsline™ audio with courtesy of Howard Long, G6LVB.)

**

HAM RADIO IN SPACE: PC SAT ECLIPSE POWER PROBLEMS

AMSAT says that PC Sat is still going strong, but is on ragged edge of power budget during maximum eclipses. This is according to Bob Bruinga, WB4APR, who reports that controllers have caught the satellite on several occasions doing a low power reset.

Bruninga adds that fortunately they have been able to restore the bird before the batteries went to negative power budget. WB4APR recommends that since there are as many as 50 users per day, it is best if everyone turns off any unattended user stations at night when PC Sat is in eclipse. (ANS)

**

EMERGING TECHNOLOGY: SECURITY PROBLEM WITH SENDMAIL - PSTCH AVAILABLE

According to its developer, the most widely used program for transferring e-mail between computer networks has a security flaw. One that could allow attackers to disrupt the flow of e-mail and intercept messages.

The program involved is called Sendmail. The security flaw does not directly affect your personal computers but it does put e-mail and information sent over the Internet at risk. Fixes for the vulnerability are available, free of charge, at Sendmail's Web site by applying a patch or upgrading to the latest version of Sendmail.

Atlanta-based Internet Security Systems Inc estimates that Sendmail handles as much as three-quarters of all Internet e-mail traffic. Sendmail Inc. which developed the program is located in Emeryville, California. (Published news reports)

**

EMERGING TECHNOLOGY: TUBE-TYPE PC'S

It seems that a venerable old friend simply refuses to die the death of technical obsolescence. The vacuum tube continues its reemergence into the audio marketplace, this time -- believe it or not -- in Personal Computerss.

The first tube motherboard appeared last year in response to PC gamers who craved the allegedly "more natural" sound produced by vacuum tube technology. Those who have seen the boasrds call it a strange sight to behold.

More on this May-December marriage of filament and silicon can be found at the website at http://www.neoseeker.com/Articles/Hardware/Reviews/aopenax4btube (CGC Communicator, Clayton Creekmore and neoseeker.com)

**

ON THE AIRWAVES: DIGITAL RADIO MONDIALE IS ON ITS WAY

After long years of gathering a consortium, prototyping and testing, Digital Radio Mondiale has announced that there will be an official launch at the World Radio Conference in Geneva, in June. Thiis according to a report in shortwave.com.

Digital Radio Mondiale, better known by its initials D-R-M is the world's only non-proprietary, digital broadcasting system for short-wave, medium-wave and long-wave with the ability to use existing frequencies and bandwidth across the globe. With near-FM quality sound, DRM hopes to revitalize the AM broadcasting bands below 30 Mhz in markets worldwide.

And right on the heels of the launch announcement came the granting of two highly significant standards for DRM. First, the International

Electrotechnical Committee has given the Digital Radio Mondiale on-air system its highest stamp of approval as an International Standard. This was followed by the International Telecommunication Union granting permission for any broadcaster to use existing frequency assignments for DRM digital transmissions. This, provided that there is no interference with other stations. (ASWLC)

**

INTERNATIONAL -IRELAND" A WALKERS FESTIVAL

Over in Ireland, word that theTipperary Amateur Radio Group provided emergency communications support for up to 300 walkers expected to take part in the A-her-low Hillwalking Festival. The event was held the weekend of April 5th and 6th in Irland's Galty Mountainsl. (GB2RS)

**

DX

In DX, word that G3RWL, will be active as 8P6DR from Barbados through the 20th of April on 10 to 40 meters. He will also be on 80 and 6 meters if he can arrange the antennas. (GB2RS)

And VK3OT will be active as VK9XI from Christmas Island through April 21st. He will be concentrating on CW on the H-F bands and 6 metres. Priority will be given to High Frequency CW when 6 is closed. More info is on the web at http://members.datafast.net.au/electronics/path.htm

**

THAT FINAL ITEM: THE PARC FIELD DAY FILM LIVES AGAIN

And finally this week some very good news for ypou ham radio cinema fans. After having been among the missing for over two decaders, a famous ham radio movie has surfaced. And it will soon have its first official public screening since its restoration was completed. The guy who has the movie on his shelf -- our own Bill Pasternak, WA6ITF, has some background on this ham radio cinematic classic:

--
The film's real name is simply Field Day 1971. It is a tongue - in cheek look at the planning and execution of the ARRL Field Day operating event by what was then one of the most active radio clubs in the United States. My home radio club The famed Pallisades Amateur Rado Club of Culver City California. Home of "good-guy the gokld plated radio" repeater.

Field Day 1971 was produced and edited by George Hively, W6GRH, -- then WA6YEA -- as a club project over thirty years ago. Hively, who has spent his life in the motion picture business wrote the script, supervised the filming, edited it together and provided the music and the narriation. And notice we said filming. Field Day 1971 was produced long before the advent of home videotape. It was shot using Super 8 millimerter motion picture film and consumer cameras. The sound track was on a separate tape cassette. In fact, it still must be projected that way -- even today.

A preview screening of the restored movie took place a March 8th at the HandiHams winter camp in Malibu California. They loved it. As a result of that enthuiastic welcome, a public showing of Field Day 1971 to the California ham radio community has been tentatively scheduled for Wednesday evening May 14th. This, hosted by the Santa Clarita Amateur Radio Club that meets just North of Los Angeles.

And for those of you who are wondering where the movie has been hiding the past 20+ years, this might surprise you. It has been kept safe and well protected by a former PARC member -- Richard Burton, the ex-WB6JAC. Richard contacted us a few months ago asking if we would like to have the movie. We said yes, and with the assistance of Anita O'Delll, N2IHX, the movie was brought back to projectable condition.

Because there is only one projectable print of Field Day 1971 available it cannot be lent out. But W6GRH tells Amateur Radio Newsline that plans call for it to be transferred to video -- either VHS casssette or possibly DVD. And the sound will always match the picture that way. We hope.

With Field Day `71 -- the movie -- sitting on my desk as I record this, I'm Bill Pasternak, WA6ITF.

--

Meantime, those wanting to attend this first public screening in two decades of this riotous movie, you should consult the Santa Clarita Valley Amateur Radio Club website for meeting details. Its on-line at www.w6jw.org. Scroll down and click on "Monthly Meetings" for more. (ARNewsline™)

Sorry about the desription of symptoms....
If I try to speak there is no meter deflection , only if i tap on the

microphone or whistle will the meter deflect....NOTHING if I speak ! and there seems to be no transmit unless i tap on the microphone and then it only deflects for the duration of the tap. I have looked in the mike and all connections seem OK.

Any ideas?

Have you only tried SSB - or have you also tried AM/CW or FM? If the radio still doesn't transmit with any of these, then it may well be more than a bad mic. If there is a carrier, try monitoring your signal and see if there is any audio - if none, then you have a pretty good idea that the problem is on the audio line, and from your description, it could well be in the microphone - having said that, there could well be other probems internal to the radio.

Matt

PA-SitRep (Pennsylvania Situation Report) is developing a group of PA-SitRep Contacts, most of whom (49) are Amateur Radio Operators. We are currently seeking additional Amateur Radio volunteers.

PA-SitRep Contacts are asked to monitor emergency situations from their local areas and post emergency situation reports to the PA-SitRep Discussion e-mail list which is used, in part, for monitoring developing emergency situations. If warranted, PA-SitRep Administrators move the emergency situation reports to our main emergency alert PA-SitRep list where the alert is distributed to over 550 subscribers throughout the state of Pennsylvania.

Our ultimate goal with PA-SitRep is to build a significant enough network of Contacts throughout Pennsylvania in order to provide timely and accurate emergency situation reports, free of charge, to those subscribed to our emergency alert e-mail distribution lists.

In addition to providing the situation reports for our own emergency alert lists, the eventual long-term goal of PA-SitRep is to provide rapid emergency situation reporting service, free of charge, to any interested served agencies, much in the same way that SKYWARN provides weather situation reports for the National Weather Service.

If you're interested in volunteering as a PA-SitRep Contact, or have any questions regarding PA-SitRep, please drop me a line at owner@pa-nospamsitrep.com (remove "nospam" from the address).

Or visit the website to learn more:

All,

I've got a 4-wire rotator (light duty) and I can't find a 4-wire
controller for it used.

Is there a way I can rig a 3-wire controller to work with the 4-wire
rotator?

TIA,

Anthony, KG4TBO

This radio is only 6 months old, bought on 8 Nov 2002. The radio has never been moved from my desk and is scratch free and brand new in look. I have no need for this much radio as it delves into satillite. A full feature radio that needs to be used to its fullest. The radio has been modified by populating solder pads to open the radio for MARS/CAP and MURS. This modification can be restored with absolutely no problem. I would like $950.00 and this will include the Yaesu desk mike which cost me $129.99 at HRO and the Radio was $1,349.99...I also have a 35Amp Astron Power Supply with two meters that is in good condition along with a MFJ-945E Antenna tuner and a Mirage Linear Amp B3016 (Mobile) with the remote box when operating mobile the receive pre-amp is inop

Make me an offer for all of it or some of it. Please check me out on www.qrz.com (KB3IUL)
We are located in Newark,Delaware and have receipts to prove age...only 6 months old and near pristine condition.
Pictures upon request
Thank you
Mike
Questions E-mail me...this equipment will go up on QRZ in the next few days.

Any Alinco DJ-V5 handheld transciever owners experience very short battery life between chargings as i do? I dont know if the problem is with the radio itself, the battery, or the charger.
Any replies regarding this would be highly appreciated.

I am having a problem with my new IC-746PRO and my MFJ dual band base antenna. SWR's are infinity across 144/148 . When I connect my duplexer in-line the SWR go down from 144/146 (1:5:1)...when I cross over into 147.00Mhz it goes to infinity(even with duplexer in-line). The radio I had before was an FT-847 inwhich I had no problem with but never was able to check SWR's...I called HRO here in Delaware and they insist my coax or antenna is bad. Why the sudden jump in SWR when crossing over to 147.000? Why do the SWR's lower when the duplexer is in line? This is baffling..any answers please e-mail me direct. I also took my radio outside to my car where I have an antenna mount and two antenna's to choose from. Only one can be connected at a time. They are both Diamond antenna's except one is dual band and the other a single 2 meter antenna. The 2 meter antenna shows perfect SWR across the band, the dual bander 2m/70cm shows SWR's in excess of 3:1...I am leaning towards the fact that the very inherent design of a dual bander antenna gives the ICOM fits....not the best analogy...help please

Thank you
KB3IUL
Mike

Amateur Radio Newsline™ Report 1341   April 25, 2003

(Note: This is the first ever Amateur Radio Newsline report anchored from outside of the United States. It was recorded in Auckland, New Zealand by Jim Meachen, ZL2BHF)

**

The following is a Closed Circuit. Newscast 1341 follows immediately. Here is Amateur Radio Newsline Support Fund administrator Andy Jarema, N6TCQ.

--

Amateur Radio Newsline is still on the air. It's still on the air because staff members paid the bills out-of-pocket. This obviously, cannot continue. These people are not Bill Gates, Warren Buffet, or even Michael Jackson. These are your everyday working people who believe so strongly in the mission of Newsline, that they will support it with hard-earned dollars.

We at Newsline need for you, our listening audience, to believe in that mission, too. To believe enough to help keep these newscasts on the air. To show your thanks to the volunteers that keep the latest in Amateur Radio news coming your way.

The address for the Newsline support fund is: Newsline, PO Box 660937, Arcadia, CA 91066.

Again, as always, thank you for your belief, and for your support.

--

Thank you Andy.

**

Amateur Radio Newsline report number 1341 with a release date of Friday, April 25 2003 to follow in 5-4-3-2-1.

The following is a Q-S-T. Bad news for United States hams who like high fidelity single sideband, good news for New Zealand hams worried about restrictive R F exposure laws and the Dayton Hamvention says that it plans to stay where it is. Find out the details on Amateur Radio Newsline report number 1341 coming your way right now.

(Billboard Cart Here)

**

A CLASH OF IDEALS: BE CAREFUL IF YOU RUN WI-FI

A sour note for hams running what some call high fidelity single sideband. It comes in a regulatory advisory letter from the FCC. Amateur Radio Newsline’s Paul Courson, WA3VJB, reports from Washington D.C.

--

The letter from FCC enforcement counsel Riley Hollingsworth went out to a list of licensed hams who favor what some call enhanced SSB, which is sometimes nicknamed upper wideband and lower wideband, characterized by extended low end response, a clean mid-range, and expanded treble or high-end crispness.

While their passion is to experiment toward exceptional audio quality with their voice transmission and reception, the experiments have been a flop with some other hams near their frequencies of operation.

Hollingworth said the Commission has received a number of complaints, and that his advisory letter is intended to inform them that the complaints claim the bandwidth of these stations is wider than necessary and contrary to good engineering practice.

The FCC letter did not cite these stations for any violations, and acknowledged that a precise measurement can be somewhat complex. But he encouraged each operator to be aware that it can be “extremely inconsiderate of other operators” to employ what Hollingsworth described as wide-band overly processed audio, especially when, in his words, such audio is combined with high intermodulation distortion generated by certain amplifiers.

Two of the hams who received the letter quickly responded to Hollingsworth. John Anning, NU9N, told the FCC that single sideband does not have to sound like a tin-can anymore, and cited the enhanced audio available from the latest manufactured transceivers from Kenwood and Yaesu, as well as the popularity of external audio augmentation marketed to the amateur community from Heilsound and W2IHY. Anning said his station does not splatter, has low distortion, and is not overly processed. He suggested the problem of splatter and excessive bandwidth from distortion products is far more common on the phone bands during any contest weekend.

The other hi-fi ham sharing his response to the FCC advisory letter is Paul Christensen, W9AC. He told Newsline he is puzzled by the letter since he’s been off the air the past six months. Christensen said the letter may have been prompted by a group he characterized as “a half dozen tightly-knit, pandering individuals.”

Both men who spoke with Newsline compared the experiments with wideband SSB to the activity of AM, which itself has enjoyed rising popularity and has been getting favorable press in QST, Electric Radio, and Popular Communications. By contrast Hollingsworth has reportedly expressed his belief single side band was developed as a mode with spacesaving advantages, with necessary tradeoffs in audio quality as a presumption with its use in the amateur service.

Again, the advisory letter carries no enforcement sanctions. But Hollingsworth told the stations such complaints can trigger petitions for rulemaking asking for constraints on such activity that the recipients of the letters had better keep in mind.

Reporting for Newsline, this is Paul Courson, WA3VJB, in Washington

--

In preparing his report WA3VJB did contact the FCC’s Riley Hollingsworth. Hollingsworth told Courson that he honestly does not think these letters have any bearing on those hams who operate AM stations altho he admits thart he is getting that question. But he says that in his view, there is no need whatsoever for A-M'ers to be concerned. (ARNewsline™, WA3VJB)

**

RADIO LAW: RF EXPOSURE LIMITS DOWN-UNDER

Some good news for hams down-under. This as the Palmerston North City Council favors Amateur Radio on a proposed plan to change local Radio Frequency exposure limits.

According to Mike Newman, ZL1BNB, the Palmerston North council has declined to accept the recommendation of the New Zealand Department of Health to adopt its testing and reporting proceedures. The Council instead adopted the less stringent emission exposure levels set out in an earlier New Zealand standard as being the maximum levels which can be generated by transmitting equipment within the Palmerston North City boundaries.

In taking this action the Palmerston North city council declined to support the government recommended approach which would have required local radio amateurs to carry out the expensive R F exposure evaluation process. Numerous amateur operators and representatives of the nations national Amateur Radio Society -- the N-Z-A-R-T -- testified in support of the measure that was adopted. (NZART)

**

RADIO LAW: CANADA NEW TOWER LAW REVIEW COMMITTEE

Back in North America, Canada’s Minister of Industry, Alan Rock, has announced the appointment of a National Antenna Tower Review Committee. The Committee will be made up of municipal officials, as well as industry, health and academic experts.

The new committee will be chaired by David A. Townsend. Townsend is a Professor of Law at the University of New Brunswick and has authored a previous study on antenna support structures.

And while the announcement outlines the composition of the new Canadian tower committee it does not give the target dates for the submission of inputs or the method by which information can be provided. Radio Amateurs of Canada, that nations national Amateur Radio society says it plans to participate in any policy review affecting Canadian ham radio operations. (RAC)

**

Break 1

From the United States of America and Auckland New Zealand, we are the Amateur Radio Newsline, heard on bulletin stations around the world including the N9AKN repeater serving Milwaukee Wisconsin.

(5 sec pause here)

**

ENFORCEMENT: RADIO STATION DINGED FOR $9000

A $9,000 fine against WRKQ - AM in Madisonville, Tennessee, has been affirmed by the Federal Communications Commission. The regulatory agency says that WRKQ allegedly failed at least once to identify itself by call sign. Also that it operated at night with daytime power and failed to adequately attenuate its second harmonic.

The harmonic is a rather interesting issue here. WRKQ operates on 1250 kHz. The FCC says that it’s second harmonic falls squarely on WWV's authorized frequency of 2.5 MHz. The FCC says that it measured WRKQ's second harmonic down at only -55 dB per centimeter whereas -70 dB is required by the rules.

You can read more on the web at
http://hraunfoss.fcc.gov/edocs_public/attachmatch/DA-03-1033A1.doc (CGC)

**

ENFORCEMENT: YOU CANT SAY THAT ON THE AIR - IN ANY LANGUAGE

The FCC is looking into what a California ham may have said on the air. The agency’s Daryl Duckworth, NN0W, explains:

--

Duckworth: “Julio Cedeno, N2GRM, of Hollywood California has 20 days to respond to an inquiry concerning both Spanish and English communications from his station operation on 14.322 MHz on March 5th and March 9th of this year. The transmissions contained threats to another amateur as well as language prohibited by the Commissions rules.”

--

In its letter the FCC noted directed that N2GRM specifically address the threats in the transmissions as well as the language. The regulatory agency says that threats made against other licensees are viewed very seriously by the Commission. It also told N2GRM that his response will used to determine what enforcement action the FCC may take in this matter.

**

ENFORCEMENT: YOU CANT SAY THAT ON THE AIR

An Eastlake Ohio ham has also heard from the FCC. On March 18th the regulatory agency issued Dave K. Childers, N8QGI, a warning letter regarding transmissions purportedly made by him last December on 27.115 MHz.

For those of you not aware, 27.115 MHz is also known as Class D Citizens Band channel 13 in regions governed by the FCC. In its note, the government agency did explain its position -- upheld by the courts -- regarding its ban on the type of language Childers is alleged to have used.

The agency also ordered Childers to respond within 20 days from the date of its letter to him. The FCC also told him that his response will be used to determine what enforcement action to take in this matter.

**

HAMVENTION 2003®: WE PLAN TO STAY AT THE HARA

The Dayton Hamvention hopes to stay at the HARA Arena well past 2003. So says the event’s General Chairman, Pat Neff, N8IGS. He tells RAIN’s Hap Holly, KC9RP that the rumors of a move are simply not true:

--

Neff: “I can’t tell you where the rumor is being propagated from but I can tell you that we are in negotiations for future years at HARA Arena and the only difference is that we are really not looking to have a long multi-year contract anymore. We want to be able to have a shorter length contract so that it could be better advantageous to us from a bottom-line aspect.”

--

Rumors of a move away from the HARA Arena or that the HARA had been sold seem to pop up every year. Newsline even heard one being circulated at the recent N-A-B show in Las Vegas. And like all before it over the years, this rumor was as phony as the rest.

But the real bottom line is what Pat Neff says -- and we quote: “As much as the city of Dayton is associated with the Hamvention, HARA is associated with Hamvention.” And to paraphrase another very famous ham -- thats the way it is! (RAIN)

**

HAMVENTION 2003®: HEAR MORE ON RAIN

By the way. You can hear more about the plans for Hamvention 2003 with Pat Neff, N8IGS, on this weeks RAIN Report. Its on-line right now in streaming audio at www.rainreport.com. Or, if you are Internet deprived, you can dial in on your phone to listen. The number in Chicago is area code 847 827 RAIN. Thats 847 827 7246. (RAIN)

**

HAMVENTION 2003®: DAYTON REMEMBERS THOSE WHO HAVE PASSED ON

Still with Hamvention related news, last week its planners announced the major award winners for 2003. And from time to time the Hamvention also recognizes the contributions of hams who have passed on but left their mark. Roy Neal, K6DUE, reports:

--

Dating back to the days when we hams talked in Morse code and used keys instead of microphones to talk, we hams call our friends who have passed on as Silent Keys'. The term is one of endearment and respect for those radio amateurs who have lead the way. And in keeping with this long tradition, the planners of the 2003 Dayton Hamvention have paused to salute a number of special people whose lives have helped to make ham radio a little bit better.

The first being saluted by Dayton is Joseph Carr, K4IPV, of Falls Church, VA. Carr became a Silent Key on November 25, 2000. During his lifetime K4IPV authored over 85 books and nearly 700 articles covering electronics and technology. He also contributed monthly columns and articles to many popular

Amateur Radio magazines.

Al Gross, W8PAL, of Sun City, Arizona became a Silent Key on December 21st, 2000. For those not aware, Gross brought the world such indispensable wireless communications devices as the walkie-talkie, the pager and cordless telephone.

A name that many Amateur Radio Newsline listeners will remember is that of Bill Orr, W6SAI. Bill became left us on January 24, 2001. He was best know for his voluminous publications for radio amateurs, including "The Radio Handbook", "The Beam Antenna Handbook" and many more. He was a good friend to me and to many other hams.

Raymond Ortgiesen, WF1B, was another major contributor to today's ham radio way of life. He authored "RTTY," the leading contest software for digital modes.

Ernie Hudson, KI8O, of Dayton, OH became a Silent Key on 8/2/2002. Hudson was a member of the Dayton Red Cross and acted as the Montgomery County Emergency Coordinator and Assistant Coordinator for a number of years. Hudson's passion was helping people. His efforts focused on public service and disaster relief while also introducing many young people in Amateur Radio.

Finally there are the Columbia Astronauts who perished earlier this year. Three of them were hams. David Brown, KC5ZTC, Kalpana "KC" Chawla, KD5ESI and Laurel Clark, KC5ZSU, who died along with crew-mates Rick Husband, Willie McCool, Michael Anderson and Han Ramon when Columbis disintegrated over Texas during re-entry.

The Dayton Amateur Radio Association says that through the Space Amateur Radio Experiment and the Amateur Radio on the International Space Station programs, ham radio has enjoyed a special relationship with the Astronaut Corps. It is for their dedication, their role in scientific advancement, and their love of their dreams that the Dayton Amateur Radio Association and the Hamvention have made this very special award this award to the crew of the space ship Columbia on its STS-107 last mission.

For the Amateur Radio Newsline, I'm Roy Neal, K6DUE, reporting

--

The announcement of these special remembrances is on the events website at www.hamvention.org (Hamvention 2003®)

**

HAM HAPPENINGS: T-HUNT TIME

And speaking about things that happen in the spring, its T-Hunt time again. Here's Joe Moell, K0OV, with the latest:

--

Are you looking for some new outdoor ham fun for the spring and summer months?

Join your fellow hams who are tuning up their radio direction finding (RDF) equipment in preparation for the hidden transmitter hunting season.

The CQ Magazine National Foxhunting Weekend will be May 10-11, a time when foxhunters from around the country go on their favorite kind of RDF adventure. It could be a mobile T-hunt. When you set out in your RDF-equipped vehicle, you never know where you'll end up and you don't know what you'll find.

Other hams prefer their foxhunting to be all on foot in a big park. They call it foxtailing, radio-orienteering or ARDF. There's an internationally recognized set of rules for this kind of hunt, which takes place in about 30 countries around the world. Stateside hams will host competitors from some of these countries at the Third USA ARDF Championships in Cincinnati, Ohio beginning July 31.

Of course your club can make up its own transmitter hunting rules. The important thing is to make plans now for transmitter hunting on May 10 and 11, the National Foxhunting Weekend. There are more foxhunting opportunities coming up, and I'll be telling you about them in another report soon. You can read about foxhunting and the National Foxhunting Weekend at my Web site: www.homingin.com. That's one word "homingin" --- homingin.com.

From southern California, where there's some kind of transmitter hunt almost every weekend, this is Joe Moell, Kay-zero-Oscar-Victor, for Amateur Radio Newsline.

--

Again Joe’s website is www.homingin.com. And homingin is one word. (ARN ewsline™, K0OV)

**

BREAK 2

This is ham radio news for today’s radio amateur. From the Auckland New Zealand and Los Angeles California, we are the Amateur Radio Newsline with links to the world from our only official website at www.arnewsline.org and being relayed by the volunteer services of the following radio amateur:

(5 sec pause here)

**

HAMS HELPING HAMS: DISTANCE LEARNING - AMATEUR RADIO STYLE

The Nacogdoches Amateur Radio Club, in Nacogdoches Texas recently solved a big problem using what it calls typical ham radio ingenuity. This, when John Fullingim, the person who was supposed to talk at their meeting could not get a ride out from Dallas about 180 miles away

Fullingim¹s program was a Power Point Presentation consisting of a series of slides accompanied by live commentary.   Rather than cancel the April 2nd meeting, Fullingham e-mailed the Power Point to Army Curtis, AE5P, in Nacogdoches. Curtis loaded it onto his laptop computer for showing at the meeting.

Next, a communications link was then established between Nacogdoches and Dallas using both the Internet and Amateur Radio courtesy of Jeff Clark, K5NAC and Kevin Anderson, KD5CCH. And on the meeting night Curtis ran the slide show in Nacogdoches as Fullingim in Dallas provided commentary using the specially installed system.

The two way link also allowed questions to be asked from the live audience. This remote program lasted almost 90 minutes, and was very well received by everyone present at the meeting. (KD5ING)

**

NEW HAM TECHNOLOGY: RIMIGATE VER 0.2 NOW AVAILABLE

Sean Jewett, KG4NRC, of Antioch, Tennessee has announced the availability of version 0.2 of his RIMiGate application program. This is a freely available Linux based APRS I Gate server.

Version 0.2 is quite a bit different from the earlier release. Users no longer need to have a Linux system to build RIMiGate. RIMiGate is now distributed as a disk image that can be written to disk using freely available tools for Linux, Windows, and Macintosh. In addition, the configuration files now reside on an M-S DOS based file system so users can easily edit configuration files.

The minimum requirements for RIMiGate is a 486 system with a minimum of 12 megs of ram. You can download the program from the http://www.rimboy.com/rimdistro/rimigate/   (KG4NRC)

**

HAM RADIO IN SPACE: AN AO-40 UPDATE

The AMSAT Oscar 40 satellite is continuing to drift downward as was predicted by its controllers. Unfortunately, this makes for bad satellite conditions that are less than favorable for passband use.

Also, the solar angle is worsening and will soon exceed 45 degrees. This will limit satellites available power while warming the spacecraft considerably as the sun swings across it.

Because of these factors, AO-40’s passband transmitters were be turned off on Saturday, April 19th. They will remain off for about 4 weeks or until conditions improve. (ANS)

**

INTERNATIONAL -GERMANY: DEUTSCHE WELLE GOES DIGITAL

Germany's international broadcaster, Deutsche Welle, has announced that as of June it will transmit digitally on shortwave to Europe and the Middle East using the Radio Mondiale broadcast system. This makes Deutsche Welle the first international broadcaster to commit to a start date for regular D-R-M transmissions on the shortwave bands. (ASWLC)

**

OUR HERITAGE: INTERNATIONAL MARCONI DAY

Saturday, the 26th of April, was 'International Marconi Day'. International Marconi Day is a 24-hour on-the-air event held annually to celebrate the birth of Guglielmo Marconi in 1874. Its also an opportunity for amateurs around the world to make contacts with historic Marconi sites to gain an award for working a specific number of participating stations.

At least 35 special event stations were to be on the air for International Marcoini Day 2003. This included the famed W1AA slash MSC Marconi Radio Club representing the Marconi 1901 Siasconset Station on Nantucket Island in the USA. There were also around 15 United Kingdom sites slated to be on such as Poldhu in Cornwall and Alum Bay on the Isle of Wight and Chelmsford in Essex. Other historic stations include VO1IMD from Signal Hill, Newfoundland, and IY4FGM from Marconi's birthplace near Bologna Italy. (MSC ARC, GB2RS)

**

DX

In DX, the RSGB reports that the International Short Wave League's VHF club callsign, MX1SWL, is being used by Tom Read, M1EYP, through the end of April. Tom will be activating several hilltops, particularly in the Pennines, for the Summits On The Air awards program. (GB2RS)

And F0 slash F8CFU planned to be on from the Tuamotu Archipelago in French Polynesia and Tubuai Island in the Austral Islands through the 16th of May. QSL as directed on the air. (GB2RS)

Also, the former 7Q7DC, has now moved to Nairobi and has been given the call 5Z4DE. Don is the first United States citizen in 12 years to obtain a Kenyan license and will be active as soon as he puts his antennas up. (OPDX)

Lastly, word that 4Z4DX, will be active on 160 to 6 meters CW and digital modes as 9N7DX from Nepal through the 12th of May. Again, Q-S-L as directed by the operator. (OPDX)

**

THAT FINAL ITEM: HAM RADIO ADVENTURE TO THE SOUTH PACIFIC

And finally this week, how about a ham who has decided not to let age stand in the way of her passion to sail and to operate from rare places. Amateur Radio Newsline’s Bruce Tennant, K6PZW, reports on a truly amazing lady:

--

Susan Meckeley, W7KFI, is 69, loves ham radio and loves to sail. And she recently told the Ohio-Penn DX Newsletter that she is headed to the South Pacific on as three-year DX'pedition odyssey.

Meckeley left Oakland, California, in January and has been slowly working her way south. At that time she spore with OPDX Meckeley was in Mexico and soon to sign W7KFI slash maritime mobile. She has already been to Ensenada, Mexico, for a month, but set sail on April 16th, for San Jose, Punta Cabras.

Heading south, Meckeley told OPDX that she would be operating from the Isle San Martin. She was heard April 17th at 24:41 UTC as XE2/W7KFI on 14.249 MHz from the island. The length of her stay is not known.

Her next stop will be at Bahia de Torguga and from there to Magdelina Bay, Cabo San Lucas, and finally La Paz. Then it is off to the islands in the Sea of Cortez for operating and into Guymas for the hurricane season. Come fall she will go down the mainland coast ending in Costa Rica. In April 2004, Meckeley is off to Galapagos Islands and into the South Pacific.

When she's on the air its with a Yaesu FT-847 and a pair of pop-up masts. She runs all modes except ATV from her 1932 Challanger called the S/V Dharma. She tells OPDX that -- and we quote -- "this size boat I can handle all by myself." And it sounds as if Susan Meckeley, W7KFI, is making her dream come true.

For the Amateur Radio Newsline, I'm Bruce Tennant, K6PZW, in Los Angeles.

--

One last note. Meckeley told OPDX that she has room on board for a crew-member if anyone wants to go. If interested, let OPDX know and the newsletter will forward the message. The e-Mail address is kb8nw@arrl.net (OPDX)

**

NEWSCAST CLOSE

With thanks to Alan Labs, Amateur News Weekly, AMSAT, the ARRL, the CGC Communicator, CQ Magazine, the FCC, the Ohio Penn DX Bulletin, Radio Netherlands, Rain, the RSGB and Australia's Q-News, that's all from the Amateur Radio Newsline(tm). Our e-mail address is newsline @arnewsline.org. More information is available at Amateur Radio Newsline's(tm) only official website located at www.arnewsline.org. You can also write to us or support us at Amateur Radio Newsline(tm), P.O. Box 660937, Arcadia, California 91066.

Before we go, a reminder that the nominating period for the 2003 amateur Radio Newsline Young Ham of the Year is now open. No significant changes from last year. Nominees must be 18 or younger. Full rules and an application is on our new special website at www.yhoty.org.

For now, with Bill Pasternak, WA6ITF, at the editors desk, I’m Jim Meachen,
ZL2BHF, in Auckland, New Zealand saying 73 and we thank you for listening."

No SB200 or others in that time frame please.

It has to have tunned inputs.

It can run from 220 vac or 12 vdc.

Please email direct and thanks in advance,

John W5CGU

I have a Kenwood TM741A with an onscreen clock. The rig was my Father-in-Law's and I don't have a manual showing how to operate the clock feature. Can anyone please advise me on how to set and operate the clock?
Thank, Dennis Wyman (KA6GDT)

1/ Ensure the back up switch (behind front panel) is ON
2/ Press and hold the F key and the Tone key then turn the power ON.
3/set the hour with tune knob press tone key
4/ set minute press Tone
5/Set Year Press Tone key
6/Set Month Press Tone
7/Set Day press Tone
8/Set day of week with level meter Mon to Suinday Press Tone

The handbook says you can display the clock in the unused freq position but
I can only get mine shown in centre or right hand??

Anyway hope this helps

73

This radio is in the condition of new as if you bought from HRO yourself. I have no interest in satellite and bought this radio as a new amatuer thinking I would get into it, but I am more interested in pursuing my General Class ticket and working HF as I bought an IC-746PRO in anticipation. This radio was mostly used on 2 meters and shortwave listening...not much time has been clocked with this radio and has not moved since I built a shelf for it. This house is 100% smoke free and with my Ebay status you can feel assured that you are being sold a radio only because I wanted to replace it with a radio designed for HF and felt the FT-847 was overkill. In the near future I will be selling my Astron VS-35 Power Supply, Yaesu Desk Mic and MFJ-945E Antenna Tuner which was bought for when I got my General Ticket so this Item is new and everything has its box and receipts with exception to the VS-35 Power Supply.....Please see my Auction and I also have a Mirage B3016 mobile 2m Linear Amp up for auction too.
Please ask any questions you desire as I will answer quickly to facilitate this sale to pay for the 746PRO

Hello,

more than year ago, I read an interresting article(s) on the net about some ultra-narrow-band digital mode, but now I can't find them and forgot keywords or name. So I'm asking you, if you do not know about it or something similar.

There an author wrote, he uses some very very narrowband digital modulation, I think, it was alike CCW or PSK31, but with band in order of 1 Hz (or bit less or more), and of course a very slow bitrate. But he wrote, he can communicate with a very low power pocket batteries (and it seems also a very bad antenna) across thousand kilometers, when he is on journey, and his wife can read at home messages, which he has sent.

So, please, if you know about some papers about these modes, using

bandwidth in order of hertz/milihertz, or any keywords for search, please
tell me.

Thank you,
Marek P.

Hello People....Does anyone have any really solid information as to what is happening with dropping the code Proficiency test to be able to operate on all the HF Bands in a phone mode!! From the input I received so far it would appear that after this ITU meeting takes place...most all the countries will be in agreement for dropping the cw portion of the Licenseing exam...to be able to operate the High Frequencies via a phone mode.....If I'm not mistaken...I think this meeting is coming up, sometime this summer???

Any and all info that has some solidary to it would be greatly appreciated....

Thanks a Lot
Carl

RE: Need alignment: Heathkit SB-401 / SB-303.

Is their anyone experienced with realigning / cleaning the switches / replacing parts (if required) etc., on my Heathkit SB-401 / SB-303 interconnected TX / RX pair? They worked fine until they were left alone for 4 or 5 years. Now they aren't quite right. But they are functioning.

I would like them gone through from head to toe.   I'm not looking for bargain basement prices --- I want it done right.

I am in Ottawa Ontario Canada. Please email me if you can help or know of a place that can do this right.

Thanks,
-- Rob Myers

It is on the agenda but there is no guarantee that they will get around =
to voting on it. The agenda is quite lengthy and they don't get to =
everything. This has happened before. Until there is a vote, there is =
no way to even guess what will happen. Even if the world conference =
votes to drop it, there will be an additional lag for implementation. =
Also keep in mind that even if the international requirement is dropped, =
each individual country can decide to keep it for their specific =
licensing requirements. Some countries have already stated that they =
plan on keeping it no matter what. Here in the US, the FCC would put =
out a Notice for Proposed Rulemaking and allow time for comments. Then =
decide on whether to drop it or not and decide on an implementation =
time.

So don't hold your breath or wait around. It's many months away if it =
happens at all. Instead, learn that 5wpm. It takes about 30 hours for =
the average person to achieve this. Some take less, some take more. So =
get one of the good computer programs, practice an hour a day (break it =
into 15 to 30 minute sessions though for best results) and you could be =
on the air in a few weeks instead of waiting months or even years.

With the sunspot cycle heading downhill, good conditions on the bands =
will become less frequent. So waiting is wasting time.

Good luck,
Dee D. Flint, N8UZE

You incorrectly snipped and interpreted my post. US hams can operate data and CW from 7000 to 7150. It is not a band plan but FCC regulation that prohibits US hams from using voice in this part of the spectrum. You are correct that we can operate CW throughout the band however but we cannot operate voice below 7150.

Well this is my Dayton 2003 trip report.

��� I thought the 2003 Dayton Hamvention was just fine.
Yea it rained all day Saturday (but it wasn't a torrential
down pour), but Thursday, Friday and Sunday where
great days for walking around outside, (and it was warm
enough (in the 60's) during Saturday's all day shower,
that with just a cheap rain poncho, and a umbrella, you
could get around ok.

��� I agree (like the last few years) their where more
BAD deals than great ones; each year the Good deals
are getting harder and harder to find.� But that's NOT
Dayton's fault, I think it's more a global state of the
economy thing.� With BRAND NEW loaded rigs selling
for under a thousand, and sometimes at special discounted
prices even as low as $500, it makes it near impossible to
get a decent buck for your old used rigs.� Historically outdoor
flea market selling prices hit ROCK BOTTOM on Sunday.

��� I didn't buy anything on Thursday.
Friday afternoon we found these great deals:
1) Decibel Products VHF cavity (the one that looks like a small garbage
can with black round tuning knobs on top.� $15.00.
2) UHF 4 Cavity Band Pass tunable filters P/N 0183646X12,� I bought 4
of them, I know these are worth 20 times more than what I paid, at $5.00 each.
3) UHF 8 Cavity Duplexer P/N 0183644X03 $25.00
4) 3.0 - 30 Mhz. Used aluminum motorized Screw Driver Antenna $100.00
5) 2100 Ma hour NmHi Batteries (I get a kick how they keep going up a few
hundred Ma each year.� In 10 years they'll be up to 10 AMPS) $1.67 each.
I bought 12 of them.
6) Misc connectors, N to N jumpers and my favorite snap on RF chokes� $10.00.
On Rainy Saturday, we made our major purchase:
1) A HP-8752C Network Analyzer.� Been looking to get one of these babies
for the past 5 years, and been waiting for its price to drop from $27,000 to
less than $5000.� Well it did this year.� Paid only $3500.
On Sunday I bought all my new stuff from my favorite Hamvention radio dealer,
AES� (NO SALES TAX, FREE Shipping, NO radio Minimums & THE BEST

DAMN HAMVENTION $$ on new equipment):
1) Yaesu FT-857�� BRAND NEW $739
2) Yaesu FT-897�� BRAND NEW $829
3) Icom IC-2720H BRAND NEW $309
Since none of the BIG 3 radio dealers (AES, R&L, HRO) had their ROCK BOTTOM PRICES posted up this year, I wasn't able to copy them all down.� So as an example, (since I didn't buy one this year) I'm clue less as to what they sold ICOM IC-706MKIIG's for.� The only discounted Dayton Hamvention prices I can swear to, are for the three popular rigs listed above.� It breaks down to an ~20% savings thou, just like the last few years.

������� And of course we sold stuff at booths 3256.5 & 3257 all three days, so I did make a small fraction of the money I spent, back.� Thanks to everyone that stopped on by, and especially to those that left some GREEN Paper ($.$$).

��� Over all I have to say it was one of the most quickest (time just flew by from Thursday to Sunday),� and it will go down as my most memorable (that's another story for another time).� I'm wondering now if next years Hamvention rules are going to be amended to include FORBIDDING Cameras, and any type of photography from being taken within the hamvention grounds (like I said another story).

��� Of course rumor has it, this may be the LAST DAYTON hamvention. Next year their talking about moving it to Columbus.� Personally I think a much better choice would be holding it in Chicago, Il.

2) Yaesu FT-897�� BRAND NEW $829
3) Icom IC-2720H BRAND NEW $309
Since none of the BIG 3 radio dealers (AES, R&L, HRO) had their ROCK BOTTOM PRICES posted up this year, I wasn't able to copy them all down.� So as an example, (since I didn't buy one this year) I'm clue less
as to what they sold ICOM IC-706MKIIG's for.� The only discounted Dayton Hamvention prices I can swear to, are for the three popular rigs listed above.� It breaks down to an ~20% savings thou, just like the last
few years.

������� And of course we sold stuff at booths 3256.5 & 3257 all three days, so I did make a small fraction of the money I spent, back.� Thanks to everyone that stopped on by, and especially to those that left me with some GREEN Paper ($.$$).

��� Over all I have to say it was one of the most quickest (time just flew by from Thursday to Sunday),� and it will go down as my most

memorable (that's another story for another time).� I'm wondering
now if next years Hamvention rules are going to be amended to include
FORBIDDING Cameras, and any type of photography from being taken
within the hamvention grounds (like I said another story).

��� Of course rumor has it, this may be the LAST DAYTON hamvention.
Next year their talking about moving it to Columbus.� Personally I think
a much better choice would be holding it in Chicago, Il.

The thing looks decent. I have no experience with that manufacturer, but that means nothing.

The unit is set up for 240 v mains, but since you're apparently in the UK, that would be desirable.

I think it does not have a storage display, based on the front panel controls. Storage is highly desirable for slower scan rates. This has rates as slow as 5 seconds per division, and you certainly can't use anything nearly that slow without storage of some sort.

All in all, it looks like a decent unit. The front panel controls all look reasonable, and the auto settings are nice. Certainly not a lot of money, but no telling how much it will actually sell for.

Best of luck.

I have been thinking about getting into QRP operating for some time now and was considering the MFJ 9040. I don't really have the time or equipment to sit down and build a kit, so the 9040 seems like a logically choice, and it is within my budget. The thing that concerns me is MFJ's quality control with these radios. I have read reviews that say the radios drift quite a bit and have had other problems. I was wondering if anyone else has bought one of theses rigs recently, and whether or not MFJ has ever got around to fixing some of the problems with the radio. Please e-mail me and let me know your thoughts.

>I have read reviews that say the radios drift quite a bit and
>have had other problems

While I can't answer your questions as to reliability or quality... I did use one of these rigs several times on QRP CW mini-Dx-peditions to islands in Lake Michigan. I found the one I used did NOT drift noticebly, ran all 3-4 days on a motorcycle battery, fit beautifully into a small Igloo cooler (along with a keyer, key, antenna, and audio filter/speaker), and was easy to operate.

I don't know that ANY single mode, single band radio is worth the asking price nowadays with almost-new, 100W, all-mode, all-band, rigs going for as little as $400-500 (TS50, Alinco HF rigs, etc...)... but if you've only got a very small budget to work with and want something for QRP/portable it might suffice. I beleive you can also purchase the Oak Hills Research 40m rig cheaply... also check on the NorCal 40.

Amateur Radio Newsline™ Report 1345 - May 23, 2003

Amateur Radio Newsline report number 1345 with a release date of Friday, May 23 2003 to follow in 5-4-3-2-1.

The following is a Q-S-T. Hello and welcome to a very special Amateur Radio Newsline being recorded live in the closing hours of Hamvention 2003. I’m Don Wilbanks, AE5DW at the combined RAIN, Amateur Radio Newsline and WA0RCR booth in Hara Arena in Trotwood Ohio. Trotwood is a suburb of Dayton for those of you not familiar with the area. With me are Newsline’s Producer Bill Pasternak, WA6ITF, RAIN Producer Hap Holly -- and a host of other people -- most probably wondering what we are up to.

Its now just a bit after 10 a.m. on Sunday May 18th. Bill has been out in the crowd with his tape recorder. So tell me, what have you been seeing and hearing.

--

(This is an audio only report at http://www.arnewsline.org)

--

I guess we all agree that its been a fun weekend and we will have more on Hamvention 2003 next week. But there lots of other news including a new ham radio allocation at 5 MHz and a proposed New Jersey law that could bring a ban on operating a two way radio -- or even changing a station on a car radio. We will have that and more, after this. (ARNewsline™)

**

Break 1

From the United States of America, We are the Amateur Radio Newsline, heard on bulletin stations around the world including the Southern California Amateur Radio Transmitting Society net in San Dimas California

(5 sec pause here)

**

RADIO RULES: FCC SAYS PARTIAL YES AT 5 MHZ

The FCC has granted hams five discrete 2.8-kHz-wide channels in the vicinity of 5 Mhz. This, in a Report and Order issued on Wednesday May 14th. But, says an ARRL Bulletin, the Commission has has declined to grant amateurs any allocation at 136 kHz at this time.

In its Notice of Proposed Rule Making a year ago, the FCC appeared inclined to go along with both requests which had come from the American Radio Relay League. But opposition arose along the way with power companies fearful of interference to their operations at 136 kHz. The National Telecommunications and Information Administration filed against the 5 Mhz grant based on a possible need for the requested band by federal government users. The five channels granted the Amateur Service are seen as a compromise.

The FCC did agree to elevate the Amateur Service, but not the Amateur-Satellite Service, to primary status at 2400 to 2402 MHz. The changes to the Part 97 go into effect 30 days after publication in The Federal Register. (FCC, ARRL)

**

RADIO LAW: N.J. MAY BAN “EVERYTHING” WHILE DRIVING

New Jersey state lawmakers are proposing a wide ranging law that would not only ban the use of cellular telephones in motion, it might also ban just about anything else a person might do while driving a car including sipping coffee or changing a radio station.

According to the May 11th Ocean County Observer, the state Assembly Transportation Committee has released a bill to better define what is and what is not considered to be reckless driving. Proponents of the measure call it an effort to reduce motor vehicle accidents caused by driver distraction.

The proposed legislation says distracting behavior includes the use of communication technology such as cellular telephones, pagers, fax machines, locating devices, video players, two-way dispatch and citizen band radios. Also on the list is the normal AM/FM radios found in most vehicles along with compact disc and tape players.

The bill also defines a variety of things that have been labeled as distracting behavior. On this list are such activities as personal grooming, consuming food or beverages, reading and tending to unsecure pets. All would be considered as reckless driving.

State Representative John Wisniewski of Middlesex is chairman of the Transportation Committee and the primary sponsor of the bill. He says that giving the police a clear mandate to stop motorists who drive inattentively is logical way to stem the tide of roadway crashes and fatalities. And while Amateur Radio is not specifically mentioned it could easily fall under the two-way radio portion of the measure if it becomes state law. (W2CE)

**

RESCUE RADIO: NHC TO PERFORM 2003 HURRICANE TEST

Mark June 1st for the National Hurricane Center's Amateur Radio station WX4NHC to conduct its 2003 hurricane season on-the-air station test. According to an ARRL bulletin the station will take to the airwaves on Sunday, June 1st from 13:00 to 22:00 U-T-C.

Coordinator John McHugh, KU4GY, says the purpose of the annual test is to check out all of the WX4NHC radios, computers and antennas using as many modes and frequencies as possible. Some R-F-I monitoring also will be done.

Listen for WX4NHC on HF worldwide and VHF and UHF in South Florida. Anyone making contact is asked to provide a signal report, location and brief weather report. QSL cards are available via W4VBQ. Please be sure to include a self addressed stamped envelope with any QSL requests.

The event will mark the first time the National Hurricane Center will use its new call sign for this event. In years past it operated as W4EHW. (ARRL)

**

RESCUE RADIO: HAM RADIO RESPONSIBLE FOR TORNADIO WARNING SYSTEM

An interesting side note to our coverage of this years tornado season and the role that ham radio is playing in storm spotting and relief efforts. We recently learned that one Kentucky city has ham radio to thank for its early warning system.

The ham responsible is retired ARRL president George Wilson, W4OYI. Wilson suggested the installation of the system following a twister that hit Brandenburg, Kentucky in April of 1974. Wilson learned that it had taken more than 40 minutes for severe weather alerts to reach Owensboro from the National Weather Service in Evansville Indiana, about 40 miles away. Thanks to the efforts of W4OYI, a month later local warnings were coming from a NOAA weather radio monitoring system installed in Owensboro. (ARNewslime™)

**

NAMES IN THE NEWS: KB2GSD BACKS AWAY FROM WJMK

Former CBS News anchor Walter Cronkite, KB2GSD, has severed his agreement with a Florida production company. This, after having signed to host for a series of corporate-sponsored videos, resembling news reports, that are broadcast on public television stations.

The New York Times reports that a production company called WJMK had recently hired Cronkite and Cable News Network anchorman Aaron Brown to replace Morley Safer of "60 Minutes" as hosts of a series called “American Medical Review.” After it was learned that pharmasutical manufacturers and other health care companies pay WJMK about $15,000 each to have their products featured in the videos the high profile hosts began to drop away. Brown backed out of his agreement with WJMK on Wednesday May 7th with Cronkite following on Thursday May 8th.

Marlene Adler who is Walter Cronkite's chief of staff, said that the retired newsman had agreed to become a host after being assured that the videos would be educational. She said he had now concluded that WJMK was using the videos, at least in part, for commercial promotion, adding that "Mr. Cronkite does not do product endorsements, and will not."

This is not the first time Cronkite has had a a problem with others using his voice or likeness. Back in January Cronkite's Attorney, Ronald S. Konecky, demanded that Glenn Baxter, K1MAN, immediately cease using a previously recorded station ID made by Cronkite several years ago. He also told Baxter to desist from the use of Cronkite's name and likeness, in any medium, and on any basis whatsoever. (ARNewsline™ and published news reports)

**

NAMES IN THE NEWS: N1SS ON W4BW

Peter Hurd, N1SS, says over the QCWA remailer that he is writing an article for publication as a tribute to the late A. Prose Walker, W4BW and is asking for your help. If you have any recallections about the A. Prose Walker that you are willing to share, please contact Hurd by e-mail to n1ss@ ainop.com or write him at PO Box 1005 Houlton Maine 04730. (QCWA Remailer)

**

HAM RADIO ON THE WEB: THE NCG REFLECTOR

Do you own an NCG radio. Looking for the latest information? Then listen up. KU4QD says that there is now an Internet a reflector for folks who have, or are just curious about, NCG gear. It also covers National brand transceivers sold in Japan that weren't imported to the U-S-A. The new group is on Yahoogroups. Go to www.yahoogroups.com and search for NCG. (VHF Reflector)

**

CONVENTIONS AND HAMFESTS: LIMARC - NEW YORK - IN JUNE

The Long Island Mobile Amateur Radio Club annual hamfest will be held Sunday, June 8 th. The venue is at Briarcliffe College in Bethpage New York from 9 a.m to 1 p.m. local Eastern time. Briarcliffe College is located at 1055 Stewart Avenue in Bethpage. For more information please visit www.limarc.org on the World Wide Web.
(K2EPM)

**

CONVENTIONS AND MEETINGS: DCC IN AUGUST

Technical papers are solicited for presentation at the 22nd Annual ARRL and Tucson Amateur Packet Radio Digital Communications Conference. The event is slated for September 19th to the 21st in Hartford, Connecticut. Conference proceedings are published by the ARRL. Presentation at the conference is not required for publication. Information on paper submission guidelines is available on-line at www.tapr.org/dcc Submissions are due by August 5th and should be sent to Maty Weinberg, ARRL, 225 Main Street, Newington, Connecticut , 06111. They can also be e-mailed to maty@arrl.org (TAPR, ARRL)

**

BREAK 2

This is ham radio news for today’s radio amateur. From the United States of America, We are the Amateur Radio Newsline with links to the world from our only official website at www.arnewsline.org and being relayed by the volunteer services of the following radio amateur:

(5 sec pause here)

ON SAFARI: A DX’PEDITION WITH A NEW TWIST

A major Dxpedition is coming up but this one is rather different. Amateur Radio Nerwsline’s Norm Seeley, KI7UP, has the details on this rather unique operation:

--
IN3QBR, IN3ZNR and AA4NN are teaming up to go on the air as the "African Double Jump Dxpedition from South Africa, Lesotho and Botswana starting at the end of June. According to their Web page, the team will meet with ZS6WPX, who will become their tour guide. Between June 28th and July 1st, the team will go on a Safari. There is a possibility they may do some operating using callsigns portable Zed S, but on July 2nd, they head to Gaborone City Botswana where they plan to erect their antennas and operate from their hotel that day. Callsigns mentioned so far are A25NN and A25ZNR.

They will leave for the town of Rustenburg on July 5th, and will travel to Sun City, South Africa. There "MAY" be some activity portable Zed S and early July 7th, they will leave for Lesotho and expect to be there late afternoon. Expected callsigns will be 7P8JB and 7P8NR. Activity will last until July 11th. They depart for Johannesburg on July 12th and expect to leave for home July 13th.
--

Please visit their Web page for updates at www.qsl.net/xu7aay/africa. More DX news later on in this weeks newscast. (via e-mail)

**

EMERGING TECHNOLOGY: INTERNET LINKING BREAKS 2000

Ian Abel, G3ZHI, reports that the total number of amateur radio repeater and simplex internet gateways now exceeds 2,000. This includes nodes on the three major linking systems, IRLP, EchoLink and eQSO. (G3ZHI)

**

INTERNATIONAL-AUSTRALIA: NEW IRLP LINKED REPEATER

And speaking about Internet based repeater linking, Q-News reports that the VK4RXG repeater on 438.500 Mhz is now up and running from a new location. This Australian repeater is linked to the IRLP network giving its users world-wide access, and the rest of the world’s hams access to VK. (Q-News)

**

EMERGING TECHNOLOGY: EUROPEAN TV LOVES SMS

Unforeseen by most media analysts, European TV networks started using short message services as an interactive channel in the late 90's. Today, many of them have embraced SMS text messaging-interactivity as a revenue-generating feature in some form, whether it be chats, voting, comments, reminders, and many other things. And believe it or not, hardly an hour of the broadcast day goes by without some channel encouraging the viewer to send messages. (Media Network)

**

INTERNATIONAL - CANADA: VE3CDM TO CANADIAN AMATEUR RADIO HALL OF FAME

Tom Atkins, VE3CDM, has been elected to the Canadian Amateur Radio Hall of Fame. This, for his extensive contribution over many years to Canadian and International Amateur Radio activities through his active involvement in numerous organizations including Radio Amateurs of Canada and the CNIB Amateur Radio Society for blind radio amateurs.

Atkins retired as President of IARU Region 2 in 2001 after having served in all of its Executive positions for eighteen years. And during this time was a member of the IARU Administrative Council and is currently serving as an IARU Expert Consultant. (RAC)

**

INTERNATIONAL - U.K.: PROPAGATION BEACONS OFF THE AIR

GB2RS reports that the two GB3BUX beacons located near the city of Buxton in the U-K are temporarilly off the ait. One operates on on 50.00 MHz and the other on 70.00 MHz in the U.K. only 4 meter band. Both have been switched off due to intermittent problems and it is believed that the repairs will take some time to complete. (GB2RS)

**

INTERNATIONAL - EUROPE: INTERNATIONAL MUSEUMS WEEKEND

The third annual International Museums Weekend will take place on the 14th and 15th of June. The event begins at midnight UTC Friday and ends at midnight UTC Sunday. Those wishing to take part should please insure they have registered via the form on the International Museums Weekend website nat www.ukradioamateur.org/imw (GB2RS)

**

ON THE AIR: W8RMR FROM THE UNSINKABLE AIRCRAFT CARRIER

The Motor City Radio Club will sponsor the 4th annual Grosse Ile Islandfest special event station from U.S. Island MI005R. Located 20 miles south of Detroit, the island was named "The Unsinkable Aircraft Carrier" back when the Naval base was active.

Listen for W8MRM operating from the hanger of the old Naval station from 14:00 UTC on May 31st to 21:00 UTC on June 1st on 28.375, 21.375, 14.244 and 7.244 MHz SSB. There may also be some CW operation, and AM with vintage gear. For a commemorative certificate send a QSL with an SASE to MCRC PO Box 337, Wyandotte, Michigan, 48192. Any question? Please e-mail K8CBS@arrl.net or visit this web site: www.w8mrm.org/k8cbs Again the call sign to be used is W8MRM. (Via press release)

**

DX

In D-X, word that G3LIV, will be active stroke 9M2 from Penang Island through the 30th of May and from Langkawi Island from May 30th to the 9th of June. He will mainly be on CW with some PSK31. (GB2RS)

And RSGB reports that K4VUD is active from Thailand again as HS0ZCW. He will be there until the middle of June. QSL as directed on the air. (RSGB)

Lastly word that MM0OKG will be on a trekking holiday in Peru and Bolivia through the 25th of May and plans to be active on 20 meter S-S-B using a Yaesu FT-817 and dipole antenna. He will operate portable from locations higher than 3500 meters above sea level. Look for him calling on 14.280 MHz, plus or minus about 10 kHz. (GB2RS)

**

THAT FINAL ITEM: THE EVER CHANGING BRAIN

Finally this week, if you have ever taken a taxi in a major city you may have wondered how the taxi drivers know how to reach even the most obscure destination without a street map or a hint from their passengers. Well, a new study indicates cabbies are working their brains so hard that they become enlarged in the zone associated with navigation.

According to the study published in the journal Proceedings of the National Academy of Sciences, the drivers' brains adapted to help them store a detailed mental map of the city. This, by shrinking in one area to allow growth in another called the rear hippocampus.

In the latest study, researchers at University College, London University compared the brains of 16 male taxi drivers with those of 50 other men of a similar age. They found that among the cabbies, the back of the hippocampus, the part of the brain associated with spatial memory, was larger than it was in the comparison group.

Scientists had previously reported differences in the structure of the brain between musicians and non-musicians. Researchers say that evidence that the brain is physically able to change according to the way it is used could be important in understanding human development. (Science Today)

NEWSCAST CLOSE

With thanks to Alan Labs, Amateur News Weekly, AMSAT, the ARRL, the CGC Communicator, CQ Magazine, the FCC, the Ohio Penn DX Bulletin, Radio Netherlands, Rain, the RSGB, Australia's Q-News, and of coarse the 2003 Dayton Hamvention -- in Trotwood Ohio -- that's all from the Amateur Radio Newsline(tm). Our e-mail address is newsline @arnewsline.org. More information is available at Amateur Radio Newsline's(tm) only official website located at www.arnewsline.org. You can also write to us or support us at Amateur Radio Newsline(tm), P.O. Box 660937, Arcadia, California 91066.

Before we go, a reminder that the nominating period for the 2003 Amateur Radio Newsline Young Ham of The Year Award closes next week on Friday May the 30th.

That means you have only a few days left to nominate a deserving young radio amateur for this award. Nominees must be 18 or younger. Full rules and an electronic fill-in-the-blank application is on our new special website at www.yhoty.org.

For now, with Bill Pasternak, WA6ITF, at the editors desk -- which this week will be a coach seat on a Northwest Airlines 757, I’m Don Wilbanks AE5DW, saying 73 from Hamvention 2003, and we thank you for listening." Amateur Radio Newsline(tm) is Copyright 2003. All rights reserved.

On the Road Again-and Again
FCC officials rack up $2.8 million travel tab with industries they regulate

http://www.openairwaves.org/telecom/report.aspx?aid=15

By Bob Williams and Morgan Jindrich

Federal Communications Commission officials have been showered with nearly $2.8 million in travel and entertainment over the past eight years, most of it from the telecommunications and broadcast industries the agency regulates, a new study by the Center for Public Integrity has found.

The FCC is preparing to relax several longstanding ownership rules for broadcasters and other media outlets. Those rules are widely credited with preventing the complete takeover of local and national media outlets by huge conglomerates such as Viacom, Tribune Co. and Rupert Murdoch's News Corp. Critics are particularly incensed the commission has held only one official public hearing on the controversial proposals, which are expected to touch off a major new round of media consolidation.

The $2.8 million paid for FCC commissioners and agency staffers to attend hundreds of conventions, conferences and other events in locations all over the world, including Paris, Hong Kong and Rio de Janeiro.

The officials often serve as speakers or panelists at the events, but many times go only as attendees. They often stay for the entire event at glitzy hotels such as the Bellagio in Las Vegas, even though they are only scheduled to give a single speech or serve on a single panel, FCC travel records show.

All told, agency officials have taken more than 2,500 such industry-sponsored trips since 1995. The Center's report analyzed trips costing more than $250 that were paid for by sources other than the FCC. The trips occurred between May 1995 and February 2003. (See searchable version of the trips database)

FCC officials took 330 such trips to Las Vegas during the period, 173 to New Orleans, 102 to New York and 98 to London. Other popular destinations included Orlando, San Francisco, Miami, Anchorage, Palm Springs, Buenos Aires and Beijing. (See listing of top destinations)

While the vast majority of the trips were sponsored by the telecommunications and broadcast industries, some were paid for by universities and international organizations. Still others were sponsored by companies that put together trade shows and conferences for a variety of industries.

Two top FCC policy advisors have taken more than 100 trips each during the period. FCC commissioners have taken dozens of trips each, often staying at posh hotels or resorts on the industry tab. Some of the sponsors have special dinners or other events to honor the FCC officials in attendance. They are sometimes provided with cars and drivers.

Photo courtesy of the National Association of Broadcasters

The biggest industry sponsor of the trips was the National Association of Broadcasters, which paid $191,472 to bring 206 FCC officials to its events. NAB, which represents radio and television stations nationwide, has lobbied aggressively in recent months to keep the current FCC rules limiting media ownership in place.

That was not always the case, however. Major networks Fox, CBS and NBC left the NAB two years ago because of the association's support for the current media ownership rules. The independent broadcasters who comprise the vast majority of NAB's membership worry they will be gobbled up by networks or media conglomerates if the rules are relaxed.

Viacom, which owns CBS, sponsored seven trips on its own, costing $9,581. Viacom spent $6,901 to bring FCC Media Bureau Chief W. Kenneth Ferree and Susan Eid, a top legal advisor to Chairman Michael K. Powell, to a company management conference in March 2002. Ferree, the chief architect of the proposal to relax the media ownership rules, did not respond to an interview request from the Center.

The second biggest sponsor of trips was the National Cable and Telecommunications Association, which spent $172,635 to bring 125 FCC officials to its events. Coming in third was the Consumer Electronics Manufacturers Association, which spent $149,285 to bring 103 FCC officials to its events, primarily its glitzy annual Consumer Electronics Show held in Las Vegas each year. CEMA heavily lobbies Congress and the FCC on a variety of issues including digital television, broadband deployment, consumer home recording rights and spectrum management.

Other big sponsors include the California Cable Television Association (80 trips, $108,242); the Federal Communications Bar Association, which represents communications attorneys that practice before the agency and includes several FCC officials as members (74 trips, $42,399); the Association of Local Television Stations, and NATPE (70 trips, $58,813.36); the Telecommunications Industry Association (38 trips, $43,506); and the Satellite Broadcasting and Communications Association (34 trips, $30,601).

FCC Chairman Powell has chalked up the most industry sponsored travel and entertainment among active commissioners during the period covered by the study-44 trips costing $84,921. Powell, the son of Secretary of State Colin Powell, almost always flies first class due to a pelvis injury he suffered in a vehicle accident while serving in the U.S. Army. (See all of the trips taken by Powell)

Powell has been an unabashed proponent of deregulation throughout his tenure with the commission and has called for doing away with most or all of the current ownership restrictions, pointing out they were put in place before the advent of the Internet, cable and satellite broadcasting. He scheduled the June 2 meeting on the ownership rules, despite criticism from consumer groups and some fellow commissioners that the matter had not been properly vetted in public hearings. (See all of the ownership rules up for a decision on June 2)

Kathleen Abernathy, a commissioner since June 2001, took 14 trips costing $16,185. Michael Copps, a commissioner since June 2001, took 14 trips costing $15,410. Kevin Martin, a commissioner since July 2001 has taken 12 trips valued at $14,857. He took another seven trips valued at $8,966 while working in a previous job as a legal advisor at the agency. Jonathan Adelstein, who joined the commission in December 2002, took three trips costing $2,998. (See a complete list of trips by current and former FCC commissioners)

Powell did not respond to a request for an interview on his travel.

Abernathy declined to be interviewed about her travel, but issued a statement saying she at times accepts reimbursement from outside groups for travel expenses to conserve FCC resources.

"The Commissioner believes that meeting with a diverse range of groups, including industry, consumer groups, and other interested parties, serves a crucial information-gathering purpose that is necessary to effective decisionmaking," said the statement. "The Commissioner occasionally travels to meet with interested parties for this purpose, particularly where parties seek to provide a tour or demonstration that cannot be provided in Washington, D.C."

None of the trips examined were sponsored by consumer groups or individuals.

All of the trips appear to have been legal under government guidelines. Other agencies routinely accept similar travel and entertainment gifts.

An FCC ethics official, who spoke only on the condition his name not be revealed, says each trip is scrutinized by the agency's Office of General Counsel to make sure it is both legal and seemly.

"We first look to see if the sponsor has any matters before the agency and what those matters might be," said the ethics official. "With that as background, we talk to the individual and weigh if there will be appearance problems. There are a lot of safeguards built in."

The ethics official said almost all trips to major trade shows and industry conventions are approved, however. "On the big shows, there is an assumption that it will be widely attended by people representing a wide variety of viewpoints," he said. "Those are a lot less troublesome for us than smaller events where the attendees might all have the same viewpoint on a particular issue."

Telecommunication industry representatives and some FCC officials defend the trips, saying they help educate regulators on important issues and provide a voice to small companies and individuals who can't afford to travel to Washington or hire a lobbyist.

"We need to understand what the industry is doing and the industry needs to understand what we are doing," said Robert Pepper, chief of the FCC's Office of Plans and Policy, who took 104 trips costing $149,595 during the period studied, second highest among agency officials. "We need to get outside the Beltway in order to do that." (See complete listing of trips by Pepper)

Pepper said the FCC should pay for such trips in an ideal world, but that isn't possible in an age of tight agency budgets. "I'm not crazy about having the industry pick up the tab, but I think it is the second-best option we have in tight fiscal times like now," he said. "The other option is for us to just stay home. That doesn't benefit anyone."

An independent federal agency called the Office of Government Ethics collects summary reports on travel and entertainment paid for by sources other than Uncle Sam and is supposed to advise individual agencies on proper policies. The agency has no enforcement power, however, meaning that the ultimate authority on industry sponsored travel is the head of the individual agencies.

Office of Government Ethics Director Amy Comstock declined to be interviewed for this study. She said through a spokesperson that industry sponsored travel and its relation to government ethics were not subjects she comments on.

Some consumer advocates are less hesitant to speak out. They say that the trips are unseemly and represent an improper coziness between FCC officials and the businesses they regulate.

"It is silly to say they [FCC officials] don't lose some of their objectivity when they are being wined and dined like they are at these industry events," said Mark Cooper, director of research at the Consumer Federation of America. "You would have to be superhuman not to."

Other critics worry that the trips could dull the objectivity of FCC officials and make the agency too chummy with the huge and politically powerful industry it is supposed to regulate. What's more, they say, the industry enjoys much better access to FCC officials because of the trips, access that isn't available to the public.

"The problem for me is the access and the personal face time the industry gets with these top officials they bring out to their events," said Andrew Schwartzman, president and CEO of the Media Access Project, a consumer advocacy group that works on telecommunications issues. "It's impossible for the public to get the same kind of access with those officials."

One government and business ethics expert says he is particularly troubled by situations where the FCC has sent many people to the same event, all on the industry tab.

"Large numbers of people going to a single event almost always causes an appearance problem, even if everything is on the up-and-up," said Stuart Gilman, president of the Ethics Resource Center, a Washington group that advises businesses and non-profits on ethics issues. Gilman was a top official at the federal government's Office of Government Ethics from 1988 to 2001.

Each year a large contingent of FCC officials head off to certain big events sponsored by broadcast and telecommunications associations.

The Consumer Electronics Manufacturers Association paid $45,737 to bring 27 FCC officials to its glitzy Consumer Electronics Show in Las Vegas in January. Most were put up at the glittery Bellagio Hotel & Casino. The association provided cars and drivers for some of the officials, including Chairman Powell and Commissioner Abernathy.

The National Association of Broadcasters spent $24,601 to bring 14 FCC officials to its annual convention in Las Vegas in 2002, including Chairman Powell and Commissioners Copps and Martin. Not far behind was the National Cable and Telecommunications Association, which paid $21,447 to bring 13 FCC officials to its annual convention in Chicago last year, including Chairman Powell and Commissioner Copps.

That was down from previous years for the NAB and NCTA conventions, however.

In 1999, NAB spent $26,113 to bring 27 FCC officials to its convention and NCTA spent $32,060 to bring 25 FCC officials to its convention.

Although they brought fewer FCC officials to their conventions last year, both NAB and NCTA spent more in travel and entertainment on each person.

NAB spent an average of $1,757 in travel and entertainment for each FCC official it brought to its 2002 convention, compared to an average of $967 in 1999. NCTA spent an average of $1,650 per FCC official for its 2002 convention, compared to an average of $1,282 in 1999.

Gilman said he would take a long, hard look at any event where more than two officials from a single agency attended on the industry tab.

"Are they sending the right message to the public if every commissioner and every senior bureaucrat head off to a single event every year?" said Gilman. "Are they maintaining an appearance of impartiality?"

Some critics of the current system say having the agency pay for all trips would help maintain a clear and proper separation between FCC officials and the industries they regulate.

But some FCC officials and industry representatives say having the FCC pay for all travel would effectively isolate the agency and rob smaller players of input in the decision making process.

"If you are a regulator proposing rules that can affect thousands of employees, it is only sensible to learn as much as you can about that business," said Dennis Wharton, a spokesman for the National Association of Broadcasters. "To the critics, I would say the alternative is to have the taxpayers pay the freight for this type of trip. At the end of the day, everyone wants informed decisions."

Taxpayers do pick up some of the tab on many of the industry-sponsored trips.

For example, Commissioner Kathleen Abernathy traveled to France last November to attend a conference sponsored by IDATE, a foundation supported by about 20 international technology firms including Motorola, Nortel and IBM.

IDATE paid $2,646 for Abernathy's flight, hotel and transportation to and from the airport for the two-day conference in Montpellier, France, located in the south of France on the Mediterranean Sea. Abernathy was also reimbursed $175 by the FCC for three days of per diem meal expenses she incurred on the trip.

In February 2003, the FCC's Competition Policy Division Deputy Chief Gregory Cooke traveled to London to attend a conference on European telephone directories. The sponsor, a conference company called Whitaker Associates, paid $900 to cover Cooke's airfare, lodging and some meals. He was reimbursed $629 by the FCC for the rest of his expenses for the trip.

Former FCC Commissioner Harold Furchtgott-Roth says he found industry-funded trips useful, although he would have preferred to have had them paid for by the agency if funds had been available.

"It almost always benefits the public because the commissioners are better informed when it comes time to make decisions," said Furchtgott-Roth, who took 58 industry sponsored trips costing $51,483 during his tenure as a commissioner from November 1997 to May 2001.

Roy Stewart, chief of the Office of Broadcast License Policy in the FCC's Media Bureau, took 107 trips, more than any other FCC employee. Until last year, Stewart had been head of the agency's Mass Media Bureau since 1989. He lost that job in a restructuring ordered by Powell in March 2002. That restructuring put Stewart under new Media Bureau Chief Ferree, a former communications lawyer who first met Powell in college at Georgetown.

Stewart says he considers travel to industry events a major part of his job.

"It is important for a government official like me to sit in a room with the industry and hear their concerns," said Stewart.. "Then it is my job to come back and relate those concerns to the chairman and the commissioners."

Furchtgott-Roth says commissioners and top FCC staff are in constant demand as speakers and must carefully choose which events they attend.

"Everyone on the commission could go to a lot more events if we chose to, but, frankly, most of them just aren't that much fun," he said. "I tried to pick events where I could get my message out to a lot of people and media or where I could gather a lot of information about the industry folks who don't have the time or money to get to Washington or hire a lobbyist."

Pepper, the Office of Plans and Policy chief, said he turned down far more events than he actually attended, even though he took 104 trips on the industry tab.

"Frankly, I could have traveled five days a week, 52 weeks a year if I had chosen to," he said. "I have always been very selective. I have to be.

Furchtgott-Roth says he never voted one way or another on a particular issue because he had accepted travel and entertainment from an industry group or individual business. He said he doesn't believe any other commissioner has, although he said the practice probably raises some legitimate questions.

"I understand people questioning there being so many of these trips, particularly when the same people seem to be going to the same events year after year," he said. "It's important to remember, however, that this is a big part of the jobs of many FCC officials, including the commissioners. They have an obligation to educate themselves and help educate others."

Schwartzman of the Media Access Project says it is probably beneficial, in an odd way, that top FCC officials attend the same big events each year.

"If they get lobbied hard at the broadcasters convention in April, the odds are they will get lobbied just as hard by the other side at the cable convention in May," said Schwartzman. "I don't doubt that they hear a variety of views as a result of all the different events they attend each year."

But there is one group FCC officials rarely or ever hear from on the convention and conference circuit, according to Schwartzman. The public.

"The only ones getting left out of this whole process are the public," said Schwartzman. "That is the real problem here.

This works out to a paltry $350,000 per year. For an organisation that size, this is chickenfeed. It's clearly the sign of a government agency that's trying to keep business travel to the bare minimum.

Guys like you seem to think that a business trip is a "perk". For people who do a lot of travelling on business, the novelty of jetting to Las Vegas for a week quickly wears off and becomes, first an inconvenience, then an annoyance. In many cases, it has caused marital strife, and in extreme cases, divorce.

You've convinced me - that the FCC is being responsibly run on a tight budget.

I want to setup my new station in my shed. I am a bit worried about RF safety and emissions. I would most likely mount my antenna on the outside back panel. or on the roof. I plan to do a dipole or ground-plane. The panel is t-111. Its thin plywood paneling. I don't want to expose myself to too much harmful radiation. Any feelings on this?

Thanks
Jeff

Read up on it.

Factors include frequency and, no surprise, power. No simple answers, though.

Distance is good, the inverse square law is your friend.

Thin plywood is slightly more protective than a sheet of paper.

Happy trails,

I am thinking about making my ham shack in an outdoor shed. I was wondering what opinions are on RF exposure. I don't have a rig yet. So I can't provide any info on my output power. I am thinking about a dipole on the back panel of the shed or a ground plan antenna on the roof. The shed panels are t-111, thin plywood stuff. Does anyone think I should worry about over exposure? Should I try to insulate the shed more to shield myself from RF exposure?

Thanks for any ideas or opinions
Jeff

Typical pro right-wing bullcrap.

It is definitely a "perk". If it is anything otherwise, why don't they
turn down these illegal gifts? There is nothing forcing them to go to
Las Vegas for a week on someone else's dime, is there?

> You've convinced me - that the FCC is being responsibly run on a tight
> budget.

Wrong. Accepting freebies (whether travel or gifts) is not acceptable
under the law. And accepting them from the very people you are
supposed to regulate is highly questionable. Even in the current
Republican regime.

If you are running HF I don't think you have anything to worry about from a health problem. No one knows for sure how much RF (non ionizing) we can stand, but the limits are set at least 10 times the best guess as to what might be a problem.

Me? I'd not worry about it from the health approach, but there is still the legal approach. Up through HF and simple antennas you can get very close to the antennas even running the legal limit and not exceed exposure limits. Without looking it up, I believe you can get within several feet of the end of an 80 meter dipole running the legal limit ...

Two-meters is the worst of the bands, but you can run up to 50 watts into the antenna before you even have to do a study. I don't remember the threshold for HF, but I think it's several hundred watts.

I you are running the legal limit, on HF, or high power on 144 and 440, then you are going to need to do a study, which is simple as you can use an online calculator and just fill in the blanks.

As I recall running close to 1500 PEP into the TH-5 at 100 feet the height of the antenna is just enough that you could stand under it and not exceed the exposure limits. On 20 meters you'd have to climb half way up the tower.

On 144 with stacked 12 element vertically polarized antennas at 130 feet I can only run 380 watts into the antennas for the uncontrolled access limits.

I currently have a Yaesu FT-8100R, and since I got it, I have been experiencing some troubles with the reception, it appers like it has some kind of atenuator working all the time, but I have review all the func and that's not it, I hace tried different things, but none worked, as I have seen this problem it's common in this radio, I hoped that I could found that prior to my purchase, but now I have it,,, and I want to put it to work, so please if someone know how to fix this, or at least how to improve the reception, please e-mail me back.

Let me throw a hypothetical at you. I have tried several RF safety
calculators and I am still trying to figure out the results!

If I were to setup a portable station inside my house running 50 watts
 (Actually more like 10-20 would be topps) through a W3FF Buddipole
portable dipole on 6 meters only would it be safe? I would be in a
30ft by 20ft room.

Just curious.
Thanks

OK...just picking 50 watts continuous in a 6 minute cycle....for 100% RF duty cycle ... It all depends. For you (controlled environment) the minimum distance from the center of the antenna is 4.32 feet and that is at a safety factor of 10 times what is *thought* to be safe.

Use http://n5xu.ae.utexas.edu/cgi-bin/rfsafety.cgi and follow their instructions for calculating average power. The calculations are based on "power into the antenna" multiplied by the % duty cycle. SSB phone is considered as 20%, but if you are transmitting 50% of the time you then multiply that by 50% to get a resulting 10%.

With FM which is considered 100%, and you operate simplex where you are transmitting 50% of the time, unless it's a round table, or a very one sided conversation, then you figure your 50 watts is calculated as 25. Or, to use a 50 watt calculation for exposure, you could be running 100 watts into the antenna.

I used the above calculator, and did the calculations for each band and antenna combination. Then I printed the sheets and put them into a note book. So, I have them handy should any one ask.

Hello--

I have an Alinco DR-570 2m/70cm radio that,
when transmitting on high power, the display
will dim to arond 50% brightness, and the power
output meter will quickly go full scale, then drop
to zero, then go full scale--repeatedly.

I believe that the radio is trying to protect itself
from damage.

On low power, all seems well, except that the
display dims more than I seem to remember it
dimming during transmit.

Does anyone have knowledge of a good place to
send it for analysis and/or repair? It is approx 10
years old, so I have to consider the cost of a new
radio over the cost of repairing this one.

Thanks for any helpful input!

I want to assemble and run the file(s) on my local BBS. They are in
7PLUS format. I downloaded 7PLUS.exe and run it, and it lists
commands and says press return to continue. I do, it lists more
commands, then return again and it exits. How do I use those commands
to decode the 7PLUS?

You don't have enough current going to the radio. Too small of wire or
plugged into the cigarette lighter jack...

Hi all -

I'm looking for a source for Crystals (just the rocks, I've got the elements). its for a Motorola Micor repeater we're using for a ham radio project. THe freq. range is: 443.125/448.125.

Anybody know where we can get a pair? I can be contacted via e-mail at ve3hbd@rac.ca

Thanks!

Clif--

You are 100% correct.

I took your advice, and looked more closely at the cabling, and sure enough, I used a power pigtail that appeared to be the same guage as my other red/black power cables, except it wasn't...the insulation was just thicker.

Thanks for the heads-up.

This should be enough motivation for me to solder on all of the Anderson PowerPole connectors I received, and do it to the kit's heavy guage wire.

Thanks, and 73.

How are you powering your radio? If from an AC power supply, you may
have a failing power supply. Your display's brightness shouldn't
change at all regardless of your transmit power setting.

73, Sam

| Hello--
|
| I have an Alinco DR-570 2m/70cm radio that,
| when transmitting on high power, the display
| will dim to arond 50% brightness, and the power
| output meter will quickly go full scale, then drop
| to zero, then go full scale--repeatedly.
|
| I believe that the radio is trying to protect itself
| from damage.
|
| On low power, all seems well, except that the
| display dims more than I seem to remember it
| dimming during transmit.

|
| Does anyone have knowledge of a good place to
| send it for analysis and/or repair? It is approx 10
| years old, so I have to consider the cost of a new
| radio over the cost of repairing this one.
|
| Thanks for any helpful input!
|
| 73

I realize you found the problem, but the answer to your question is:

http://www.therfshop.com/

I also have a DR-570, and Randy fixed my dead display.

Randy does FAST quality work. He had my radio back before
I even missed it.

I'm pretty sure you can still order them from International Crystal and probably other crystal manyfacturers.

I have re-crystaled a couple of micors for the ham bands. I used
Bomar. I sent them the elements and they installed crystals and
temp-compensated them. I am told if you just install new rocks they
will drift since the Fcx goes through a 24X multiplier to get up to
UHF. Bomar charges $25 US. I had a lot of fun setting up my micor. I
set up a 100 watt in my truck. Good luck with the project 73.

William if no comes forward -- you can find 12 or more manual vendors at
URL:
http://ac6v.com/manuals.htm

Also you can probably find them on e-Bay. There is a service manual up for auction now.

I am not licensed yet but did go out and purchase the RS HTX 420 after reading several reviews. In my price range (on sale) and seemed to fit the bill for a beginner 2m setup. I am having a heck of a time finding anything about theory. I wonder if there is a monopoly on knowledge by the books. How to find out where the repeaters are in the area, what exactly is ctcss? I am not one to simply look at a bank of questions and memorize all the answers. I want to know what the theory is. I know this is an obtuse posting as well as quick, but the baby is crying so I need to get back to her. Please help with any websites . . . thanks

Not sure what you mean by "monopoly on knowledge". Some information is best presented in book form, and there is certainly no guarantee that everything you want to know is available for free on the Net.

The ARRL book "Now You're Talking" does a good job of teaching the basics for real and prepping you for the Technician exam.

There are some online listings of repeaters, as well as books and CDs available. These change from time to time.

CTCSS stands for Continuous Tone Coded Squelch System. Some repeaters require you to add a sub-audible tone or they will not respond, which is helpful if there is interference. These days, in most areas you are better off having a tone capable radio. There are other names for this feature as well.

Joining a local radio club would be helpful.

Happy trails,
Gary (net.yogi.bear)

No originals but exceptionally high quality copies including original size schematics.

I highly recommend them.

Doug,

A little Google search led to the following URL:
http://home.t-online.de/home/dg1bbq/7plus.htm
where you'll find a link to a ZIPped manual. Have fun!

Not sure of your question -- but for 2M there is a list of repeater pairs commonly used in the USA -- see URL:
http://www.sera.org/2.html
Includes simplex and digital frequencies as well.

Other Bands at URL:
http://www.sera.org/freq0101.html

I don't think so. It's just that a lot of people post to the more specific
sub-groups rather than this general heading.

Greetings, soon I am looking at upgrading to General/Extra and I have a
Yaesu FT-100D
that I currently use for 6M thru 440. I want to put an HF antenna on it but
wanted some
opinions on what would be best. Preferrably for all bands, 6M thru 160M.

I've been contemplating the ATAS-100, but does that only cover 40M thru
160M?

Thanks in advance,
-Ian, KE6CBL

Cheap and easy to build your own, try a dipole(s), or look in the ARRL
Handbook or Antenna Handbook (at library if you don't own one) for
other ideas. If you want to buy a commercial one, try Radio Works
(www.radioworks.com) they make some good products and have decent
designs. Their catalog and web site is also a wealth of technical
info.

The Atas does 70CM- 40Meters. It does not do 80 or 160. It is a very
low profile mobile antenna and tunes well. Other options are HiQ or a
more common screwdriver for multiband use. I use Hamsticks 1 per band
and stop the car and change antennas to change bands. Definitely
cheaper to start out at just $15 or so each.

Does anyone have an old 77-79 callbook that might be able to see if my

first licensed call is in there - KA4GCB? I am trying to figure out
when I first got licensed (I believe it was around 77-79 - any help is
appreciated!

I just got off of the phone with Toyota.
they told me that if a radio transmitter requires a license to operate,
then it's too powerful to use in a 2003 Toyota.

If you want to install a ham radio in your car without voiding your warranty,
then I guess you should not buy a new Toyota like I did...

Like anything, things will change for hams if there is a large group of people
will take action.It would be interesting to list cars, houses, neighborhoods,
etc. that are "ham friendly".

Amateur Radio Newsline™ Report 1342 - May 2, 2003

Amateur Radio Newsline report number 1342 with a release date of Friday, May 2 2003 to follow in 5-4-3-2-1.

The following is a Q-S-T. An all ham crew takes over the International Space Station, another new record on 136 Kilohertz and the FCC asks the Amateur Auxiliary to help clean up the 10 meter band. Find out more on Amateur Radio Newsline report number 1342 coming your way right now.

HAM RADIO IN SPACE: TWO-MAN EXPEDITION 7 HAM RADIO CREW ARRIVES AT ISS

A two ham Expedition 7 crew arrived at the International Space Station on April 28th to replace the crew currently on board. Amateur Radio Newsline's Roy Neal, K6DUE, has the rest of the story:

- -

There are five men in the crew aboard the International Space Station. Those numbers ARE different. Now that U S Space Shuttles are temporarily out of commission, the Russian Soyuz has been pressed into service as a ferry. Much of its space is filled with food and supplies and the crew size has been cut from 3 down to 2 for the time being.

Two men...cosmonaut Yuri Malenchenko, RK3DUP and astronaut Ed Lu, KC5WKJ, have arrived....the first teamever to get to the I S S aboard a Russian spacecraft. They will replace 3 men...Commander Ken Bowersox, KD5JBP, Don Pettit, KD5MDT, and Nikolai Budarin, RV3FB. That team is scheduled to fly back to earth on the third of May, using a Soyuz that has been docked in orbit since the Columbia shuttle disintegrated killing all seven people on board.

A NASA investigation apppears to be centering on a piece of foam insulation as the cause of disaster...foam that broke loose during liftoff, hitting the Shuttle's left wing.

A final report on the accident may be several more months in coming. Until then Russia's Soyuz is the only crew transport to and from the i s s and the International Space Program has slowed to a mere trickle of its former self. Space officials of the 9 countries directly concerned with building and flying the shuttle are optimistic, saying the delay gives them time better to prepare for the very complex missions of the next ten years.

Roy Neal, K6DUE

--

The two man Expedition 7 crew will spend the next six months on-orbit conducting scientific experiments. Because of the reduced workload they may also have more time for additional ham radio operations and especially school contacts from space. (ARNewsline™ from published reports)

**

ENFORCEMENT: AMATEUR AUXILIARY ASKED TO ASSIST FCC IN 10 METER CLEAN-UP

Back on Mother Earth, the FCC has asked the assistance of the ARRL' s Amateur Auxiliary as part of a clean-up of illegal users of the 10 meter band. In a memorandum issued on April 28th, FCC Special Counsel Riley Hollingsworth, K4ZDH, asks the Auxiliary's help for the next 6 months in identifying any unlicensed operation using the 10 meter Amateur spectrum.

From May through October Auxiliary members will be tasked with monitoring the band to determine whether interlopers are domestic business entities. This includes trucking companies, truckers or other individuals who are not licensed to be in the band or simply not licensed at all.

The FCC is not requesting that Auxiliary members provide direction finding. Hollingsworth does ask that where possible that Auxiliary members provide the names and cities of the operators, and license plate numbers and state if the interfering signal is coming from a vehicle.

The project has been assigned case number 2003-583 and Hollingsworth does ask Auxiliary members to use their best judgment as to whether to include tape recordings of what they monitor. Authority to use the ham radio volunteers in this investigation comes under the terms of long standing agreement between the FCC's Field Operations Bureau and the American Radio Relay League. (FCC)

**

ENFORCEMENT: 11 METER OPERATION BRINGS FCC WRATH TO IDAHO HAMS

Meantime, the FCC has let a trio of Idaho amateurs know that unlicensed operation outside Amateur Radio frequencies could lead to revocation of their ham tickets. Bruce Tennant, K6PZW, has more:

--

The ARRL Letter reports that FCC Special Counsel Riley Hollingsworth, K4ZDH, recently wrote three Boise amateurs, citing allegations that they had transmitted without a license on several frequencies near the 11 meter Blass D CB band.

Letters went out March 17 to Dave Every, KD7QAS; John F. Hail, KD7QAW; and Tom M. Sjoberg, KD7RCS. Every holds a General ticket, while Hail and Sjoberg are Technician licensees.

According to Hollingsworth, the Commission has information indicating that the three hams transmitted without a license on 26.350, 27.420 and 27.700 MHz using SSB and SSTV. These three frequencies involved are above and below the 11 meter Citizens Radio Band.

Hollingsworth letter pointed out that in addition to the possibility of license revocation proceedings being undertaken, fines for unlicensed operation could also be imposed. These normally range from $7500 to $10,000.

For the Amateur Radio Newslione, I'm Bruce Tennant, K6PZW, reporting.

--

Hollingsworth says he understands that the unlicensed operations have ceased. (ARRL)

**

ENFORCEMENT: KANSAS STATION OWNER FINED

The FCC has fined Maria L. Salazar, licensee of Station KTCM - FM in Kingman, Kansas, and owner of an antenna structure near Spivey, Kansas, thirty-nine thousand dollars. This, for what the Commission says are willful and repeated violations of the Communications Act and of the Commission's Rules. Amateur Radio Newsline's Bill Pasternak, WA6ITF, has the details:

--

Specifically, the regulatory agency says that Maria L. Salazar operated a radio station from an unauthorized location and that she failed to maintain prescribed obstruction lighting on an antenna structure. But thats not all. Te FCC says that she also failed to install and maintain Emergency Alert System equipment at the station, failed to maintain a main studio at an authorized location and failed to maintain a public inspection file.

By way of background, on July 18, 2002, the Commission issued a Notice of Apparent Liability for Forfeiture -- better known as a fine -- in the amount of $39,000 to Salazar. Although she received a copy of the N-A-L, she never filed a response. So the FCC has now affirmed the fine and ordered Salizar to -- pay up.

For the Amateur Radio Newsline, Bill Pasternak, WA6ITF.

--

The FCC has instructed its Enforcement Bureau to do a follow-up investigation to determine whether Salazar has come into compliance. If not, further enforcement action will be taken. That could include the possibility of a license revocation proceeding.   (FCC)

FCC BEGINS INQUIRY REGARDING BROADBAND OVER POWER LINES

The FCC has also launched an inquiry into the use of existing power lines to send and receive broadband data by carrier current as some old timers might call it.

According to Bob Gonsett's CGC Communicator, two different Broadband over Power Line or B-P-L techniques are being considered. "Access B-P-L" uses 1,000 to 40,000 volt power lines to bring Internet and other broadband data to homes and offices. "In-House B-P-L" uses existing electric utility wiring to network computers and printers - as well as smart appliances - within a building.

CGC notes that today's chip sets for this application are capable of generating RF out to at least 80 MHz using advanced modulation techniques and high data rates. The question of radio frequency interference to authorized spectrum users including Amateur Radio will be an important consideration as these systems are looked at by the FCC.

More is at the FCC's website at:
http://hraunfoss.fcc.gov/edocs_public/attachmatch/DOC-233537A1.doc
and http://hraunfoss.fcc.gov/edocs_public/attachmatch/FCC-03-100A1.doc
(CGC Communicator)

**

HAM RADIO TESTING: NCVEC REMOVES PSK31 QUESTION FROM POOL

The NCVEC Question Pool Committee has withdrawn the use of a test question has in the Technician pool scheduled for use starting July 1st. The querstion designated number T2B17 deals with PSK-31 communications technology.

Again, this is for the new Technician class exam that goers into service on July 1st. The committee says that it apologizes for any inconvenience.
(NCVEC)

**

RADIO RULES: FCC REFUSES TO EXPAND THE NCE FM BAND

The FCC has declined to expand the Non-Commercial Educational FM or NCE broadcast. This, band beyond its current limits of 88.1 to 91.9 MHz.

Specifically, the FCC says that television Channel 6 which runs from from 82 to 88 MHz will not be used for NCE radio. Nor will the upper end of the current NCE band be expanded to 93.9 Mhz.

That said, the agency has indicated the expansion issue could be revisited in another FCC proceeding. (CGC Communicator)

**

RADIO LAW: CALIFORNIA PRB-1 LIKE LAW ON TRACK

ARRL Southwestern Division Director Art Goddard, W6XD, reports that the California limited antenna structure protection measure passed the state Assembly on a vote of 67 to nothing on April 10th. Writing in the division electronic newsletter, Goddars days that the bill, patterned after the ferderal P R B One, was then sent to the state Senate where it received its first reading. It now awaits assignment to a Senate committee and further action. (ARRL SW Div. Newsletter)

**

HAM RADIO IN CYBERSPACE: MIZUHO WEBSITE BACK UP

KU4QD says over the VHF Reflector that the unofficial English language Mizuho website is back up. This site is dedicated to Mizuho built ham radio gear and contains a wealth of reference material that's hard to find anywhere else.

For those of you who don't know about Mizuho, it is a family run business started by a former Trio engineer over 30 years ago. The company is best known for its HF and VHF SSB and CW monoband handhelds. These were manufactured from 1981 until 2002. The company also made some VHF base and portable SSB/CW rigs.

KU4QD says that some of the manuals and schematics haven't been uploaded yet, but everything else is there, including more new pictures and specs for various Mizuho gear. And , oh yes. You will find the website at www.mizuhoradio.com (VHF Reflector)

**

NAMES IN THE NEWS: K8JE TO SPEAK AT MURRAY STATE UNIVERSITY ARC

ARRL Great Lakes Division Director Jim Weaver, K8JE, will visit the Murray State University Amateur Radio Club at the club's May 6 meeting. Weaver will talk on Amateur Radio today and as it will be in the future and all radio amateurs in western Kentucky are invited. The venue is the Freed Curd Auditorium of the I & T Building on the Murray State campus at 7 p.m. local time. Murray State University is located in Murray Kentuckey. For directions contact Ron Ladd by e-mail to UBX@Webtv.net or visit campus.murraystate.edu/org/msuarc (Via e-mail)

**

CONVENTIONS AND HAMFESTS: COLORADO IN MAY

The 2003 ARRL Rocky Mountain Division Convention is slated for May 30, 31 and June 1st at the Holiday Inn Estes Park Conference Center. League President Jim Haynie, W5JBP, is slated to be the featured speaker at Saturday Night's Banquet. For more information take your web browser to www.hamconcolorado.org (Via e-mail)

**

HAPPENING AT HAMVENTION 2003r - THE AMSAT FORUM

This years Dayton Hamvention AMSAT Forum will place special emphasis on the status of new satellite projects such as Phase III E and the Eagle ham satellites which are currently being designed. The speakers list so far includes Rick Hambly, W2GPS, Bdale Garbee, KB0G and Gould Smith, WA4SXM, to name only a few.

This years AMSAT Forum will be on will be on Saturday, May 17th from 8:15 to 9:45 EDT in HARA Arena Meeting Room 1. The session is always standing room only. More is on the web at http://www.amsat.org/amsat/activities/dayton (AMSAT)

**

HAPPENING AT HAMVENTION 2003r - THE ANNUAL TOWN MEETING

And Amateur Radio Newsline is again teaming up with the Hamvention to bring you another in its ongoing series of Ham Radio Town Meetings. Ken Lock, N8PJN, has the details:

--

This years topic is how to make Amateur Radio more friendly for kids so that they will stay in the hobby. Our keynote speaker is Mr. Audio himself -- Bob Heil, K9EID. Bob has been a ham since he was a youngster and has some definite ideas on this subject.

Other presenters include New York Educator Carole Perry, WB2MGP, Philadelphia KYW Radio personality Mark Abrams, NT3V and his son - 2002 Young Ham of the Year award recipient Josh Abramowicz, KB3GWY. Josh will cover scouting and its relationship to ham radio youth.

From Florida Richard Paczkowski, Jr., KF4BIA, will be joining us. Richard was our 1998 Young Ham of the Year award winner. He will talk about ways the Internet can be used to interest kids in the hobby.

Others on the speakers roster are Gary Pearce, KN4AQ, of the ARRL's Public Relations Committee and Keith Glispie, WA6TFD, of Suite Sixteen Post in

Burbank California. Glispie is a true Amateur Radio success story that took him from a teenage ham to the co-owner of one of televisions most sought after editing facilities.

Also joining us will be John Creel, WB3GXW, who is the outgoing Chairman of the NCVEC and 2003 Radio Amateur of the Year Larry "Tree" Tyree, N6TR, talking about the ham radio children's holiday he created called Kids Day.

And as always there will be door prizes. This year the goodies include an 2 meter HT courtesy of Alinco and a mini-bom-box AM, FM, Cassette radio from Jensen.

So, please join us at Hamvention 2003 for this special session dedicated to making ham radio a friendlier world for the younger set. Rember, kids are the future of the hobby.

For the Amateur Radio Newsline, I'm Ken Locke, N8PJN.

--

The Ham Radio Town Meeting is from 1 to 3 P.M on Saturday May 17th. The venue is the HARA Arena in Dayton Ohio in meeting room 3. We hope to see you there. (ARNewsline™)

**

HAM RADIO MOVIES: FIELD DAY `71 - REDUX

Two weeks ago we told you that the famed Palisades Amateur Radio Club movie "Field Day 1971" had surfaced after almost two decades in hiding. Now, Southern California hams can get to see it again on Wednesday evening, May 14th. This, in a special screening hosted by the Santa Clarita Amateur Radio Club and Amateur Radio Newsline.

"Field Day 1971" was produced by George Hively, W6GRH, -- then WA6YEA -- over thirty years ago. His half-hour movie is a tongue-in-cheek look at the way one of the regions most famous radio clubs of the 20th century held forth annually to conquer the vagaries of the Ionesphere while having a jolly old time. Or, was it just having a jolly old time with some radios thrown in as an excuse for a hilltop party? Only this movie knows for sure!

The venue chosen for the screening is the City Council Chambers in the City of Santa Clarita California at 7 p.m. Pacific Daylight time. Talk in will be on the 146.79 W6JW repeater. The repeater uses an access tone is 123.0 Hz.

There is only room for about 190 people, so seating will be first-come, first served, with one expeption. If you are a former Palisades Amateur Radio Club member and want to reserve a seat please e-mail wa6itf@arnewsline.org. For more information on the Santa Clarita Amateur Radio Club and the meeting, take your web browser over to www.w6jw.org and click on the word "announcements." (ARNewsline™)

**
BREAK 2

This is ham radio news for today's radio amateur. From the United States of America, We are the Amateur Radio Newsline with links to the world from our only official website at www.arnewsline.org and being relayed by the volunteer services of the following radio amateur:

RADIO RECORDS: FIRST GM TO YU ON 136 KHX

Another new record has been set on 136 Kilohertz. This, as a ham in Scotland contacts his counterpart in Yugoslavia. Jeramy Boot, G4NJH, has more:

--

Simon Lewis, GM4PLM, completed the first Scotland to Yugoslavia LF contact on the 20th of April. At 2228 UTC on Sunday, Simon had a two-way contact with Teo, YU7AR, on 137.7kHz.

Simon was using equipment left behind by David Bowman, G0MRF, when the UK 73kHz record was broken, as reported on GB2RS two weeks ago.

GM4PLM is currently the only known GM active on the 136kHz band and at present is using a 125-metre long wire antenna. He plans to improve the antenna system over the summer in preparation for trans-Atlantic tests next winter.

Jeramy Boot, G4NJH

--

After completeing the QSO, Lewis paused to thank G0MRF and G3GRO for their help, and for the donation of equipment to allow him to become active on the 136kHz band. (GB2RS)

**

ON THE AIR: SPECIAL EVENT - 58 YEARS SINCE WW-2

On the air, members of the Crimea Contest Club will activate special event station, EO58JM, from the Ukraine between May 5th to the 11th. Their operation is to celebrate the 58 years since World War II. QSL's via KG6AR. (OPDX)

**

ON THE AIR: CELEBRATING SIBERIA

And keep an ear out for special event stations using the call signs UE9OWQ and UE9ORQ to be active between May 10th to the 18th. This to celebrate the 10th anniversary of the Radio Prim Correspondence club in Siberia. The two stations are also expected to be on between June 28th to the 30th for the 110th anniversary of the capital city of Novosibirsk Siberia. For more details and on how to receive a special certificate, visit www.nsk.su/~rpc/eh.htm (OPDX)

**

ON THE AIR: THE OREGON QSO PARTY 2003

The 2003 Oregon QSO Party will take place on Saturday, May 10 beginning at 14:00 UTC. Sponsored by the Central Oregon DX Club, the object is to work stations in Oregon, and for Oregon stations to work the world. For full information select the Oregon QSO Party link on the Central Oregon DX Club web page at www.codxc.org (K2DI)

**

DX

In DX, CT1CPP is active as S92UN from Sao Tome and Principe for the next three months. Suggested frequencies are 14.270, 21.270 and 28. 470 MHz on SSB. QSL as directed on the air.

And thirteen members of the F6KOP club station will be active as TM7R from Groix Island through the 12th of May. The operation will be on the HF, VHF and UHF bands using CW, SSB, PSK 31, RTTY and Slow Scan TV.

Lastly, the visit by Bill Burton, T88BA, to the South-West Island of Palau, scheduled been postponed until next month, The reason: A lack of money for fueling the government ship that was to carry him. (DX via OPDX and GB2RS)

**

THAT FINAL ITEM: TALKING TO A NOT SO SILENT S.K.

And finally this week, have you ever talked with a Silent Key? Believe it or not we have. His name is Ray Ortgiesen, WF1B, and last week he was named as an honored Silent Key by the planners of this years Dayton Hamvention. But as you will hrear, Ray is very much alive, well and and delighting the honor:

--

Ortgiesen: "I'm enjoying it so far. Its been quite a gas to get phone calls and e-mail's from so many people concerned about my health."

--

Why is the not so Silent Key recieving all these health and welfare inquiries? Well, heres the story in a nut-shell.

Back in the 1980's, in the Neanderthal days of home computing, Ray wrote RTTY. This program soon became the leading contest software for computerized radio teletype. And last week the Dayton Hamvention decided to honor him by nameing him as one of a group of Silent Key Award recipients. But Ray as we already know, Ray is still very much among the living and his first chore was letting everyone know he was still here.

--

Ortgeisen: "Its been fun. I did send out some e-mails as soon as I found out that it was publicized. I sent out e-mails on the of the major reflectors grearting them from the other side and leetting them know that I was fine, and obviously there was a mistake made."

--

Mistake or not, Ray is now an official walking, talking and breathing Silent Key. So we asked him if he had any special wish for the future of the hobby:

--

Ortgeisen: "I hope with the coming of digital and especially computerization that we can keep people interested in radio."

--

And as to the award itself? WF1B, had these -- er -- parting words:

--

Ortgeisen: "Its nice to know that folks considered me for this award, and I am happier to know it being alive, than not ever having known this fact had I indeed been a Silent Key."

--

How the mistake nameing Ortgiesen as a Silent Key Award winner is not clear. But no matter. Ray says that he' kind of enjoying the honor of being this years Dayton Hamvention -- not so silent -- "Silent Key."
(ARNewsline™)

Amateur Radio Newsline™ Report 1343 – May 9, 2003

Amateur Radio Newsline report number 1343 with a release date of Friday, May 9th, 2003 to follow in 5-4-3-2-1

The following is a Q-S-T. Ham radio provides aid as tornadoes rip across mid America, a record session for the VEC testing system and the FCC opens the filing period on 'Broadband over Power Line communications. All this and more on Amateur Radio Newsline report number 1343 coming your way right now.

(Billboard Cart Here)

**

RESCUE RADIO: TORNADOES SWEEP THE NATIONS MID-REGION

Ham radio has again come to the aid of America. This time as a series of killer tornadoes rip across the Central and South-Eastern states. We have the details in this report:

--
Blackouts, water shortages and desperate searches for the missing. This is the situation confronting tornado battered residents of the central United States as the death toll rises to 40 from the most violent weather in four years.

Beginning on Sunday the 4th and continuing through most of the week, swarms of violent thunderstorms and tornadoes crashed through the United States midsection. They caused devastation in three states and are spawning problems in several others.

Kansas, Missouri and Tennessee suffered the worst damage in the initial Sunday onslaught. Kansas listed seven people killed, Missouri had seventeen fatalities and Tennessee sixteen. The storms also disrupted electrical power and telephone service with debris from fallen structures blocking roads in some areas.

One of the hardest hit areas was Madison County, Tennessee where ten people were killed. There, power blackouts were widespread and it was not known when telephone service can be restored. Several of the regions A-R-E-S groups were reported activated as was the Missouri Traffic Net operating near 3 point 960 MHz in the 75 meter band.

In Missouri, ARRL Section Emergency Coordinator, Don Moore, K-M-Zero-R, reports that amateur operators are continuing damage assessment duties. An ARRL bulletin says that the Amateur Radio Emergency Service, Radio Amateur Civil Emergency Service and SKYWARN groups were active across the affected area. Hams are also assisting the American Red Cross and Salvation Army relief operations.

A bit to the West, in Kansas, Section Manager Ron Cowan, K-B-Zero-D-T-I, says that one tornado touched down in Leavenworth County. It remained on the ground before crossing the border into Missouri. There the storm brought havoc to Platte and Clay counties before falling apart just North-East of Kansas City. But during its trek, Wyandotte and Leavenworth Counties sustained severe damage. Cowan says that homes were destroyed and utilities knocked out along the twisters path.

The tornadoes were believed to be a part of a huge weather system that rolled across the Midwest and parts of the South. It also spawned twisters in Arkansas, South Dakota and Nebraska. Storms on Tuesday and Wednesday accounted for funnel cloud sightings in Alabama, Illinois and here in Louisiana. In all, nine states are affected and the National Weather Service credited ham radio operators with dozens of storm related reports over the weekend and they are continuing into the week.

As we go to air, hundreds of people are still being housed in temporary shelters where Amateur Radio volunteers have become an important ingredient in relief efforts.

This is obviously an ongoing story and we will have an update in next week’s Amateur Radio Newsline report.

From New Orleans, Louisiana, I’m Don Wilbanks, AE5DW.

Jim.

--

Thanks Don. (ARNewsline™ from various sources including ARRL bulletins)

**

RESCUE RADIO: TORNADO DESTROYS K0ETC BEACON

There is an ironic side to this story directly affecting ham radio. The K0ETC beacon North of Joplin Missouri in grid square EM27 was aparently destroyed when one of the twisters blew down the building housing it. An Internet posting by the beacons owner Jay Rupar, K0ETC, shortly after the incident said that there were no injuries at the former beacon site but two people were killed by the same storm about 30 miles away. Rupar says that the present location of the beacon itself is unknown but that it will be replaced. (KC6WFS/7)

**

HAM RADIO HEROES: NOAA HONORS “ALERT” VOLUNTEERS

The National Oceanic and Atmospheric Administration has selected ALERT -- the Alabama Emergency Response Team to receive one of this years NOAA Environmental Hero Awards. This award recognizes ALERT for its outstanding efforts in support of the NOAA National Weather Service Forecast Office in Birmingham.

NOAA says that under the leadership of ALERT president Chuck Arthur, KF4SSX, team members have spent hundreds of hours using ham radio to coordinate storm reports throughout the Birminham office’s warning area. The agency goes on to say that over the years they have proven to be an invaluable resource during such major events as an F 4 tornado that struck Tuscaloolsa County on December 16th of 2000 and the tornado outbreak of November 24th 2001.

NOAA took special note of ALERT’s work following last years Veterans Day severe weather outbreak that included to F 3 catagory tornados that killed 12 people. NOAA says that the ALERT volunteers stayed with their Amateur Radio stations relaying critical storm reports to meteorologists and relaying storm information to Emergency Manasers across the central and northern tiers of the state. NOAA says thart the steady flow of reports were crucial to the issuance of new warnings and the office’s ability to quickly get the word out to the publiic.

Presented in in conjunction with Earth Day celebrations, the award honors NOAA volunteers for their tireless efforts to preserve and protect our nation’s environment. It was presentede to ALERT on Satyrday, May 3rd. More on ALERT is on the web at www.alert-alabama.org. (NOAA)

**

THE VEC SYSTYEM: A PROBABLE E-FILING LICENSING RECORD SET

Before a ham can respond to an emergency, he or she first has to become licensed. And a Wisconsin college may have set a new Amateur Radio record in that area. Would you believe 81 new hams in less than 24 hours? Well its true and Amateur Radio Newsline’s Roy Neal, K6DUE, is here with the rest of the story:

--

It happened in Wisconsin. Picture this. 81 students sat for and passed their amateur radio tech class license exams in one day. What’s more, they received their license grants within 24 hours! This became the largest test session ever to employ the new technique of on-line submission of test results and applicant data to the FCC. They are the students of Dr. John Weiss, WD8KLO of U W Stouts’ College of Technology, Engineering and Management

Weiss gave his students the option of earning their radio licenses in partial fulfillment of class requirements. The examination team was coordinated by John Burningham, WB8PUF, of UW-Stout’s communication, Education and Training Department. It included Weiss; Jon Fuller, W9JHF, Student Life Services; and

UW-Stout students Andy Wagner, KB9TAC and Scott Littfin, N0EDV.

The University of Wisconsin-Stout has a reputation for firsts. In 2001, the college, which is located in Menomonie, became the first to receive the prestigious Malcolm Baldrige National Quality Award. It was presented by none other than President George W. Bush.

The rapid license grants were made possible by using newly available VE-to-VEC-to-FCC electronic submission technology developed by the W5YI Volunteer Examination Coordinator. Using password-protected electronic forms posted to the W5YI VEC website, John Burningham, WB8PUF began keying in the test results right after the exam session.

All 81 applications were waiting at the VEC Office when it opened the following morning. After routine screening, the applications were electronically retransmitted to the FCC. Within an hour, the FCC issued the licenses and call signs. These were immediately forwarded over the Internet to Burningham who informed the waiting students of the new calls while at the same time probably setting a new electronic licensing record for ham radio in the United States. 81 new hams in one day at one licensing location.

Go Wisconsin Stout!

For the Amateur Radio Newsline, Roy Neal, K6DUE.

--

Weiss is an Associate Professor at UW-Stout specializing in advanced telecommunications technology. Additional information on the school’s telecommunication systems program is available on the web at http://tcs.uwstout.edu. (W5YI)

HAMVENTION 2003®: FCC TO BE A NO-SHOW

Don't look for any major ham radio regulatory announcements at next weeks Dayton Hamvention. That's because the agency will not be there. David Black, KB4KCH, reports from Amateur Radio Newsline’s South-East Bureau on the what and the why:

--

Hamvention producer Garry Matthews, K-B-8-G-O-L says conflicting commitments will keep regular FCC presenters Riley Hollingsworth, K4ZDH, and Bill Cross, W3TN from attending. Matthews says the Hamvention tried to find suitable replacements, but none were available.

Speculation suggested that FCC officials might use the Hamvention's Forum to release news of a so-called omnibus Amateur Radio Notice of Proposed Rule Making expected out in May. The notice would consist primarily of outstanding rules change requests and pending petitions for reconsideration. With the Dayton FCC forum canceled, what venue, if any, the Commission might use for its release is not clear.

And what about the two hours on Saturday morning May 17th the FCC was supposed to fill? Matthews says it's being offered to other session leaders who might not like their current time slots and want to change. He says the FCC hould be back in 2004 with Hollingsworth, Cross and perhaps others representing the Commission.

From the South-East Bureau in Birmingham Alabama, I'm David Black, KB4KCH.

--

We will have more Hamvention 2003® happenings later on in this weeks Amateur Radio Newsline report. (ARNewsline™)

**

RADIO RULES: FCC TAKING COMMENTS ON PLC NOI

And speaking about the FCC, e have a follow up on last weeks story about the agency releasing its Notice of Inquiry on the deployment of ''Broadband over Power Line'' or B-P-L technology. Now comes word that the complete Notice of Inquirey which was released on April 28th is available on the FCC Web site. Also that the FCC now is accepting electronically filed comments via its Electronic Comment Filing System ECFS Express page.

But what about the actual affect of B-P-L on ham radio. An ARRL Bulletin, explains that ''Broadband over Power Line'' is really a form of carrier-current communication better known around the world as power line carrier or P-L-C.

B-P-L would couple high-frequency RF to parts of the power grid and use existing power lines as the transmission medium to deliver broadband and Internet access. This is the same technology refused for use in Japan becuse tests showed signifigant interference to consumer electronic products including Amateur Radio on the high frequency bands. And in the Notice of Inquirey the FCC does acknowledge the signifigant interference risk from B-P-L.

ARRL Lab Manager and RFI-guru Ed Hare, W1RFI, also has concerns. A noted expert in the field, Hare cautions that deployment of B-P-L could affect every amateur in communities where it's employed. This, by causing a significant increase in noise levels. Obviously, this is one isssue that a lot of hams will be filing comments on with the FCC. (ARRL)

**

ENFORCEMENT: UNAUTHORIZED OPERATION BRINGS $5000 FINE

The FCC has issued a $5000 fine to Blue Ridge Erectors, Inc. of Bangor Pennsylvania. This, for operating radio transmitting equipment on 467.250 MHz without Commission authorization.

According to the FCC, back on August 27, 2002, the agency’s New York Field Office issued the forfeiture notice to Blue Ridge but the company has not filed a response to the N-A-L. After waiting almost three-quarters of a year the FCC has affirmed the fine and has ordered Blue Ridge Erectors to pay the $5000 within 30 days of the release of its Order.

For more information on this one take your web browser over to the FCC website at http://hraunfoss.fcc.gov/edocs_public/attachmatch/DA-03-1366A1 (FCC)

**

ENFORCEMENT: FCC ALLEGES MICHIGAN HAM ENGAGED IN DELIBERATE INTERFERENCE, THREATS

The FCC claims that a ham has engaged in deliberate interference, broadcasting and that he threatened other amateurs. And now the agency is sending Michael Guernsey Sr, ND8V, of Parchment Michigan a tape recording to back up those assertions. Amateur Radio Newsline’s Blair Alper, KA9SEQ, has the details:

--

According to the ARRL Letter, since late 1998, Michael Guernsey, Sr., N-D-8-V, has been the recipient of seven letters from FCC Special Counsel Riley Hollingsworth. This includes two warning notices. And in 2000, the FCC threatened to designate Guernsey's license for a revocation and suspension hearing. Guernsey subsequently agreed to a nine-month suspension of his High Frequency operating privileges in 2001.

But on April 7th of this year Hollingsworth again wrote to Guernsey. This time Hollingsworth said that the operation of Guernsey’s station over the last several years raises questions about the Michigan hams’ qualifications to remain a Commission licensee.

According to Hollingsworth, this time there is audio to support the claims. The recorded transmissions were made this past March 26th, and are said to back up complaints from other amateurs of deliberate interference on 20 meters. In his letter, Hollingsworth noted that some of the interference apparently sprang from on-the-air personal disputes or from what Guernsey perceived as deliberate interference to his transmissions. Even so, Hollingsworth said, Guernsey has apparently ignored the Commission's written and verbal warnings to not retaliate with similar behavior.

Hollingsworth advised Guernsey that the alleged deliberate retaliatory threats and transmissions on top of other QSOs are contrary to FCC rules. He also stated this indicates that the numerous warnings issued to date have little, if any, effect in regarding to bringing Guernsey’s operation into compliance with Commission rules, indicating that other, harsher enforcement action may be needed.

For the Amateur Radio Newsline, I’m Blair Alper, KA9SEQ, reporting.

--

Hollingsworth told Guernsey review the tape recording and respond in writing and in detail within 20 days of reciept of its reciept. He said the FCC will use the information Guernsey submits to decide whether to designate ND8V’s license for a suspension and revocation proceeding or to lift voice privileges from Guernsey's license for the remainder of his license term, which ends in 2012. (ARRL, FCC)

**

HAMVENTION 2003®: MEET THE MAN BEHIND QRZ.COM

Want to meet the man who makes possible the famed QRZ.COM website? If you're going to the Dayton Hamvention this year, be sure and make it a point to stop by the W5YI booth in the main building and say hello to Fred Lloyd, AA7BQ, the founder of QRZ.COM. Fred says that he will be there throughout the show and will have some nice QRZ.COM name badge souvineers to hand out to everyone who stops by along with the latest QRZ Ham Radio CD-ROM at a special show price. (QRZ.COM)

**

HAMVENTION 2003®: THE DX HOSPITALITY SUITE

The Northern Ohio DX Association and WVNO Radio will once again sponsor a Hospitality Suite at this year's Dayton Hamvention. The suite will be open on Friday and Saturday evenings in Suite 1011 of the Crowne Plaza Hotel. The Crown Plaza is the old Stouffers located in downtown Dayton.

And in a tribute to one of the areas best known hams, the association is dedicating this year's Hospitality Suite to "Silent Key" Jim Hire, W8ZET, who was a Northern Ohio DX Association Honorary Life Member.

Hire’s wife, Janeen, KC8BRS, has decided to keep the tradition going. She will be providing some special memorabilia of Jim at the Hospitality Suite. (NODXA)

**

HAMVENTION 2003®: RAIN - NEWSLINE BOOTH

And by the way, if you are one of those planning to attend Hamvention 2003, please be sure to pass by the RAIN, Newsline and WA0RCR combined booth to say hello. Its in the Silver Arena area of the HARA Arena complex in space number 358. We hope to see you there. (ARNewsline™)

**

BREAK 2

This is ham radio news for today’s radio amateur. From the United States of America, We are the Amateur Radio Newsline with links to the world from our only official website at www.arnewsline.org heard on the W7SP repeater in Salt Lake City Utah and being relayed by the volunteer services of the following radio amateur:

(5 sec pause here)

**

CHANGING OF THE GUARD: ED JUGE, W5EJ, - S.K.

Some sad news to report. Word thar well-known amateur Ed Juge, W5EJ, has passed away.

Aaccording to longtime friend and colleague Bob Miller, K2RM, Juge, the former W5TOO, was an executive at RadioShack for many years and one of the people who kept ham radio on the company's radar. Outside the world of ham radio, W5EJ was a well-known and well-respected figure in the computer industry.

Ed Juge also had served on the ARRL No-Code committee in the late 1980s, chaired the ARRL Digital Committee in 1992 and was particularly active in QRP. He is survived by his wife, Jo, KA5ABC, by two children and three grandchildren. (CQ)

**

EMERGING TECHNOLOGY: COGNITIVE RADIO - IT LIVES

Believe it or not there a movement underway at the FCC to increase spectrum efficiency through the use of a new technology being called cognitive radio.

What is cognative radio you ask? This is radio gear and antenna systems that could adapt to their operating environments by automatically identifying vacant spectrum, switching to that spectrum and carrying out a specific communications mission.

Cognitive radio will also be the subject of an upcoming workshop at FCC headquarters. More information is at the http://hraunfoss.fcc.gov/edocs_public/attachmatch/DOC-233615A1.doc (CGC)

**

ON THE WEB: HOW STUFF WORKS

Want to find out how something works? Try taking your web browser over to www.howstuffworks.com. The site is a wealth of information on just about anything in life including ham radio. In fact, if you want a good laymens explanation of our hobby, the direct U-R-L is http://electronics.howstuffworks.com/ham-radio.htm (AE5DW)

**

SPECIAL EVENT: AMATEUR CROSS BAND COMMUNICATIONS TEST

Iin celebration of the 54th anniversary of Armed Forces Day, the United States Army, Air Force, Navy, Marine Corps and Coast Guard are co-sponsoring the annual Military and Amateur Radio Communication Test for 2003. These tests provide hams and short wave listeners an opportunity to demonstrate their individual technical skills while receiving recognition from the Secretary of Defense along with the appropriate military radio stations.

According to an Internet post by N6DDF, although the actual armed Forces Day is celebrated on Saturday, May 17th the crossband communications test was to be conducted one week earlier on May 10th. This, so that it would not conflict with the Dayton Hamvention

QSL cards will be provided to those stations who made contact with the military stations. Also, a special commemorative certificate will be awarded to anyone who receives and copies the digital message from the Secretary of Defense.
(Via Internet)

**

DX

In D-X, members of the Clube Radioamadores do Entroncamento will use the special callsign, CS7AL, and will be active May 31st from Castel Alcanede for the Portuguese Castles Award. Operation will be on 40 and 20 meter SSB. Castel Alcanede is located in the Province of Ribatejo. QSL via CT1BXE, direct or via the bureau. (OPDX)

Also look for W2AZK and KF2HC from the North Jersey DX Association portable on St.Croix from June 12th to the 19th. Operation will be SSB and CW on 160 through 10 meters. QSL direct or via the bureau to the call worked. Confirmed QSOs are good towards the North Jersey D-X Association award. See www.njdxa.org for details. (OPDX)

**

THAT FINAL ITEM: ROYAL HONORS

And finally this week, a radio amateur has received royal honors in the Netherlands. Hans van de Groenendaal, ZS6AKV, of the SARL news service has the story of Lou van de Nadort PA0LOU:

--

Lou van de Nadort PA0LOU, retired Chairman of the International Amateur Radio Union Region 1 was recognised by Queen Beatrix of the Netherlands for his outstanding contribution to Amateur Radio. He was decorated with Member of the “Order of Oranje Nassau”.

Lou was one of the 3594 people who were recognised this year by the queen when the Royal Recognition awards were announced on April 30, in Holland known as “Koningine dag”, the queens birthday .

Lou van de Nadort retired from the IARU Region 1 Executive in October last year after having been almost 28 years at the helm of the organisation. In his farewell editorial in Region 1 News he called it retirement from active duty and wrote “I will always have IARU and its work at heart and will continue to support the cause"

The medal was presented to Lou at his home in Zundert in Holland when the Major and a delegation of civics and members of the VERON Council arrived there on April 30. Lou said it took my totally by surprise, I never expected it.

Hans van de Groenendaal ZS6AKV

--

ZS6AKV adds that the award is an acknowledgement for PA0LOU’s outstanding contribution to the community. (SARL News Service)

NEWSCAST CLOSE

With thanks to Alan Labs, Amateur News Weekly, AMSAT, the ARRL, the CGC Communicator, CQ Magazine, the FCC, the Ohio Penn DX Bulletin, Radio Netherlands, Rain, the RSGB and Australia's Q-News, that's all from the Amateur Radio Newsline(tm). Our e-mail address is newsline @arnewsline.org. More information is available at Amateur Radio Newsline's(tm) only official website located at www.arnewsline.org. You can also write to us or support us at Amateur Radio Newsline(tm), P.O. Box 660937, Arcadia, California 91066.

Before we go, a reminder that the nominating period for the 2003 amateur Radio Newsline Young Ham of the Year closes May 30th. Nominees must be 18 or younger. Full rules and a fill-in-the-blank electronic application are at our new special website at www.yhoty.org.

For now, with Bill Pasternak, WA6ITF, at the editors desk, I’m Jim Davis, W2JKD, saying 73, see you next week from Hamvention 2003, and we thank you for listening.

50 watt Kenwood TM-261 2m VHF Transceiver with Backlit DTMF microphone.
$100 COD from Salem, OR
blissninny at comcast.net
503-371-3131

Details:

High RF power output
Rugged construction (MIL-STD)
61 multi-function memory channels plus 1 call channel
Memory Name (MN) function with 6-digit alphanumeric display
DTSS selective calling
Multi-scan capability
Dual menu system
Multi-function microphone with backlit keys

High RF power output
The TM-261A puts out an impressive 50 watts. Also has mid- and low-power settings.

Meets MIL-STD requirements
Strict MIL-STD environmental standards for vibration (MIL-STD 810C) and physical shock (MIL-STD 810D) are fully complied with.

61 multi-function memory channels plus 1 call channel
For quick access, essential data -- transmit and receive frequencies, frequency step, tone frequency, etc. -- can be stored in the 62 memory channels. All channels can store transmit and receive frequencies independently for odd split repeaters.

Memory Name (MN) function
All 62 channels can be identified alphanumerically (max. 6 characters) instead of by frequency. This is particularly convenient for repeaters and club channels. It is also possible to switch to a channel number display.

DTSS selective calling
Built-in DTSS (Dual-Tone Squelch System) allows DTMF access: the squelch is opened only when a specific 3-digit code has been received. Using the wildcard asterisk, group calling is also possible.

Multi-scan capability
Choose from several scan modes: full band scan, programmable band scan, and memory scan with programmable memory channel lock-out. There are also 2 scan stop modes: TO (time-operated) and CO (carrier-operated).

Dual menu system
Two menu modes -- A and B -- offer full control over such settings as frequency step and the time-out timer, when required.

DTMF memory function
Up to ten 15-digit DTMF codes with ID can be stored for auto-dial and autopatch use. Redial is also provided.

Built-in CTCSS tone encoder and optional decoder
The decoder enables the setting of different tones for transmit and receive.

Backlit DTMF microphone
This multi-function microphone has backlit keys to facilitate operation in low-light situations.

Other Features:
- Tone scan
- Wireless cloning function
- Auto repeater offset
- Repeater reverse switch
- Lock function
- Busy channel lockout
- Auto power-off
- Time-out timer

Dimensions (W x H x D)
140 x 40 x 160.5 mm (5.51 x 1.57 x 6.31 in.)

Today I strung up a G5RV antenna in preparation for upgrading my license. I tuned into the 40 meter band to hear nothing but AM radio stations from 7150 to 7300. Is there something wrong with my radio? Is it showing the wrong frequencies? If not, why am I hearing this in the whole SSB portion of 40 meters instead of hearing hams?

Don't Touch That Dial!!!!!! :-)

What you heard is normal during certain times of the day. The Amateurs normally don't operate during certain times but the broadcasters in other regions of the world are operating all the time. THERE IS NOTHING WRONG WITH YOUR RADIO!!!!

The broadcasters are using high power directional antennas and they will quite often be stronger signals than the Amateur radio signals that you experience. Sometimes it pays off to have a narrow single side band filter in your radio so that you can get closer to the AM broadcasters and not get stomped on by them too much. In addition there are some adjustments on some HF radios that will help to reduce the interference. IF shift and slope tuning are a couple of things that can help with a little bit of practice.

Good luck on your upgrade and your future HF experiences.

welcome to the 40 meter band. it is true, from about 7100 to 7300 the band is occupied by broadcast stations. There are times that various frequencies are not occupied, and that is when the hams use them. Those that are currently using them are familiar with the times that the frequencies they are using are not occupied, and that is when they qso. This is a problem, and manifests itself after dark, as this is when the band opens up, and also when it goes long. There are several nets using the band between 7230 and 7240 in the evenings until midnight, usually every night, for WAS stuff, and they consider themselves fortunate when there is not interference from broadcast and the occasional qrm'er.

>...nothing but AM radio stations from 7150 to
>7300. Is there something wrong with my radio?

Nope.... that's the way 40m is (in the stretch you quote)... it's shared with SW broadcasters. QRM from the broadcasters is usually nil during the earlier portion of the day but gets progressively worse towards late afternoon/evening.
 GREAT band for CW DXing in the evening (no broadcasters in the low end of the band).

BTW...You'll still be able to find room in-between the broadcasts to make QSOs.
Good filters and a selective rig will help.

Thanks for all the replies. I do have various features on my FT-100D that I am sure will help me on this band.

Does anyone know of a website where I can find a breakdown of the HF bands that explain the propigation of each one (when the best time is for propigation, where I might typically be able to talk to, etc...)?

Andy a good general band/prop at URL: http://www.eham.net/newham/bands

Also try the NCDXF Beacons URL:
http://www.ncdxf.org/beacon/index.html

Many of the propagation programs such as IONCAP, WinCap, and Miniprop will
plot charts and graphs.

IONCAP http://www.taborsoft.com/w0omi/w0omi.shtml

WINCAP http://www.taborsoft.com/wwizard3/

MINIPROP http://www.qsl.net/k7hg/software.html

Some more charts from ARRL at URL: http://www.arrl.org/qst/propcharts/

Good Luck es propagation

Website?????????
```

Why not turn the rig on and listen? That's the best way to learn.

It's discussed in the "Now You're Talking" study guide and the General study
guide.  Hopefully you kept these as part of your reference library.  In
addition, it is discussed quite thoroughly in the ARRL Operating Manual.

Actually.... it's not a bad suggestion. Propogation predictions are nice, but are only that, 'predictions'. Tunin' around will give you a better 'feel' for what band does what at different times of the day/month/year.

Sometimes a band can appear 'dead', but it might just be that few folks are on the air (15 & 10m and the WARC bands come to mind). A CQ can sometimes bring 'em out of the woodwork.

The 40m 'Novice' band usally appears 'dead' in my area during the late morning, but a short CQ will almost always get an answer.

PA-SitRep (Pennsylvania Situation Report) is developing
a group of PA-SitRep Contacts, most of whom (51)
are Amateur Radio Operators. We are currently seeking
additional Amateur Radio volunteers. Here is our
current list of PA-SitRep Contacts (the lists are divided
by Western, Central and Eastern PA Regions):

http://www.pa-sitrep.com/contact.htm

PA-SitRep Contacts are asked to monitor emergency
situations from their local areas and post emergency
situation reports to the PA-SitRep Discussion e-mail
list which is used, in part, for monitoring developing
emergency situations. If warranted, PA-SitRep
Administrators move the emergency situation reports
to our main emergency alert PA-SitRep list where the
alert is distributed to over 600 subscribers throughout
the state of Pennsylvania.

Our ultimate goal with PA-SitRep is to build a significant
enough network of Contacts throughout Pennsylvania in
order to provide timely and accurate Emergency Situation
Reports, free of charge, to those subscribed to our
emergency alert e-mail distribution lists and any other
interested groups or agencies - much in the same way that
SKYWARN provides weather situation reports for the
National Weather Service.

If you're interested in volunteering as a PA-SitRep,
please visit the website to learn more:
http://www.pa-sitrep.com

-David Kleber, KB3FXI
PA-SitRep List Owner and PA-SitRep.com Founder
www.PA-SitRep.com

PA-SitRep website and mail lists are
100% non-commercial / non-profit.

The very best aspect of turning a radio on and listen-
ing is that you will find out what the actual conditions
are - live, in real time. No models, no predictions.
Just plain hard data. What more could you ask for?

<rant>
When a ham would rather look something up on a web

And why spend possibly several days tuning around at various times on various frequencies to figure out which ones are better during certian times of the day when you can ask someone!?

On 14 May 2003, airwavesmith@aol.com (Airwavesmith) amused us with:

> FS One HYGAIN TAPE MEASURE Antenna.
> Welcome the joy of summer fun.

This reads like "Engrish!"

See:
http://www.engrish.com/

> Perfect for camping,fishing and field days.

Yes, even more! We can hook our bait to the dipole for fishing a DX stations! Or you can hang your laundry on it while camping.

> Feels like a portable beam that fits in your field jacket

Wha-a-a-a-at?? That sounds damned painful!

>and reminisce the olden days.

Ah yes, when knights were bold, and their LANCES were 33 feet in length with a gamma match, and they carried them in their POCKET!

Still a great idea for a portable antenna!

Hi all,

It's been a while since I last posted any form of information about Harry's Homebrew Homepages at http://w1.859.telia.com/~u85920178/index.htm I now have over 200 projects related to radio, antennas, audio and electronics in general. Most of the projects are supported with Printed Circuit Board (PCB) copper foil patterns in BMP format complete with component overlay.

Recent projects have included a magnetic pickup phono pre-amp and an AF level meter. The level meter is also supported with photographs, as are about 50% of the projects on the homepages, even the FM broadcast transmitter projects.

A couple of months ago I added some generic information about the design of broadband HF Power Amplifier design, but mono-band VHF PA design is on the list. At the moment I am building a TV camera so I can include more instructional "how to" films.

Anyone have their IC-M88 handheld marine transceiver programmed to enable
the LMR (land mobile radio) functionality? It's normally used for commercial
business, but it does overlap into the amateur 2 meter band (144-148 MHz).
The LMR band covers 146-174 MHz, which also overlaps marine band
(156.05-163.275 MHz).

I got my ham license over a year ago and haven't used it. I bought the
IC-M88 to replace my dead Horizon HS-250, and got the '88 specifically
because of LMR capability.

Can the M88's 22 LMR channels be programmed to work with 2 meter amateur
repeaters? It supports CTCSS and DTCS...

Finally, is the programming done using a PC and serial cable, or manually
using the keypad?

Hi,
I am a technician class working on my general. Just purchased an FT 101ZD

transceiver and FV 101Z external VFO. The external VFO has space for 6
crystals. Where might I be able to find some of those crystals?
Paul Armes

7100 to 7300 is SW Broadcast band 41 Meters.
7000 to 7100 is 40 Meter Ham band.

But that's only from observation and what it says on the back of my
Grundig Tacht Boy 400.

Above 7300 you can find some MARS stuff.

Lee

A quick trip report for anyone who might be interested.
I arrived friday morning just in time for the opening. I walked the entire outdoor flea market looking for "treasures". What I saw was loads of horribly over priced Collins rigs and several older (kenwood 520,yaesu 101) rigs priced at about double what they are worth. There were bargains but you had to be quick or they were gone.
Saturday morning I had great expectations of finding a good buy on a used HF rig only to have them washed away by the rain that started one hour after the opening and lasted all day ruining the outdoor flea market so I headed in Hara Arena which was packed....I was amazed at the number of ham operators who smelled like they had not had a bath in several days nor had they combed their hair or used deoderant...The stench was overbearing so I went back to my motel room as I had a early Sunday flight back home.
Overall not a horrible show but the weather really hurt everyone. I also wish people would bathe before mingling in a crowd....Better luck next year!

In the US, there is ham SSB activity from 7150 to 7300. However we tend to operate this range in the daytime more than at night as it is very difficult coping with the shortwave broadcasters. So if you want to hear hams on these frequencies, you need to be listening during the middle of the day although there is some ham activity at night.

US hams are limited to CW and data modes from 7000 to 7100. However in other countries, hams can operate voice here.

Amateur Radio Newsline™ Report 1344 – May 16, 2003

The following is a closed circuit advisory. Amateur Radio Newsline report number 1344 will follow.

Ladies and gentlemen, Amateur Radio Newsline’s support fund administrator, Andy Jarema, N6TCQ.

--

I want to begin by saying thank-you to all of those who have contributed so far to keeping these Amateur Radio Newsline reports coming your way. As I said a few weeks ago, to continue bringing you the news and to continue to honor the accomplishments of youthful radio amateurs with the Young Ham of the Year Award, we have to raise about $1000 a month. I am happy to tell you that thanks to your generosity, we are now about 20% of the way to that goal. That’s the good news. The bad is that we still have 80% of the way to go and the bills keep coming in.

I know that I have said this before but I have to again. The bottom line is that you, and only you keep all of this going. Its your tax deductible contributions that pay the cost of producing and distributing Amateur Radio Newsline bulletins. Its your generosity that makes possible the honor bestowed on a young ham operator every August.

Without any doubt, you are the most important part of the Amateur Radio Newsline family because it is you who tell us through your contributions that you want us to continue. And for that we are eternally grateful.

Remember, Amateur Radio Newsline is a federal 501 c 3, not for profit corporation, and, as I said earlier, your contributions are tax deductible. Our address is the Amateur Radio Newsline Support Fund, Post Office Box 660937, Arcadia California, 91066.

Thank you for taking the time to listen. Newscast number 1344 follows immediately.

--

Thank you Andy. Now, Amateur Radio Newsline report number 1344 with a release date of Thursday, May 15th 2003 to follow in 5-4-3-2-1.

The following is a Q-S-T. The tornadoes of May continue as ham radio lends a hand and the doors open at Hamvention 2003. Find out the details on Amateur Radio Newsline report number 1344 coming your way right now.

(Billboard Cart Here)

**

RESCUE RADIO: THE TORNADOES OF MAY CONTINUE

According to statics, May 4th through the 10th, 2003 was the most active week of tornadoes on record. This, as scores of twisters ripped across the nation's midsection, reducing hundreds of homes and businesses to splinters. We have more on the storms and the part ham radio played in the aftermath in this report.

--

It was a busy week for ARES and RACES volunteers across the nations mid-section. Nearly 300 tornadoes have been reported since the beginning of May. That’s nearly 100 more than the most recent comparable outbreak in 1999. And so far, May 4th to the 10th has been the most volatile time of all.

Tornadoes have been everywhere from Oklahoma and Kansas to the West and to Alabama and Tennessee here on the south. And ham radio operators have been on the job as severe weather spotters looking for approaching storms. They have also been part of the clean-up effort after they have hit.

Among the groups using ham radio is the Salvation Army. Its website says that nine emergency disaster vehicles were set up in Kansas and Western Missouri following twisters that hit there. Its communications arm -- the Salvation Army Team Emergency Radio Network was dispatched to each location to assist using Amateur Radio channels.

One twister that struck the Oklahoma City area late Friday the 9th approached the metropolitan area from the southwest, then skipped through the city. This storm snapped utility poles, flipped a light airplane parked at a local airport and ripped apart an elementary school. It also knocked out a lot of telephone communications bringing out emergency trained ham radio operators to fill in.

Not long after this tornado hit, the Federal Communications Commission declared a general communications emergency for the Oklahoma area. United States Amateurs were told that they could not use 3 point 900 MHz, plus or minus 3 kHz, unless they were handling emergency traffic. The FCC said the declaration was in support of ham radio communications by the Salvation Army's tornado relief efforts. The ban was in force for about 24 hours, terminating at 22:30 on Saturday May 10th.

And on Saturday, May 10th, the weather service posted more tornado warnings for parts of Indiana, Missouri and Illinois. And the Storm Prediction Center said severe thunderstorms were likely from eastern Oklahoma to western Ohio. In northeastern Kentucky, at least 17 people were treated at hospitals and more than two dozen homes were damaged Saturday night after a tornado hit in Lewis and Mason counties near Maysville. This put already weary ham radio communicators back on alert once again. Adding to the misery, torrential downpours flooded streets and fields in Indiana put hams there on call as well.

But it was not over yet. Storms with wind speeds of up to 150 mph hit parts of Central Kentucky early Sunday the 11th. Homes were damaged in Hardin, Hart and Mercer counties. Retired ARRL President George Wilson, W4OYI, who lives in Owensboro Kentucky says that there were two siren alerts indicating severe weather was on its way. He says that local hams involved in storm spotting duties geared up under the leadership of Emergency Coordinator Jake Jennings, KG4EMO. Thankfully, no twisters actually hit but one was spotted around midnight causing one of the alarms.

Severe weather alert systems and ham radio operators involved in ARES and RACES may be in for quite a work out in the days to come. This is because meteoreologists say that the 2003 tornado season is really just beginning.

For the Amateur Radio Newsline, I'm Don Wilbanks, AE5DW, in New Orleans.

--

President Bush has cleared the way for federal aid by issuing a disaster declaration for ravaged areas of Tennessee, Kansas, and Missouri Oklahoma. The tornadoes combined with straight-line wind, lightning and floods to caused 44 deaths from Kansas to Georgia. (ARNewsline™)

**

HAMVENTION 2003®: HAMVENTION WANTS TO STAY AT HARA!

The 2003 Dayton Hamvention is on and the big news is that it wants to stay where it is. Amateur Radio Newsline's producer Bill Pasternak, WA6ITF, has that story:

--

The Hamvention wants to stay at the Hara Arena. So says the Dayton Daily News which reports that Hamvention organizers are in negotiations for a two-year contract to comtinue using the Trotwood Ohio facility. My colleague Henry Feinberg, K2SSQ, has that part of the story:

--

The Dayton Daily News article Bill refereed to quotes Hamvention production manager Garry Matthews, KB8GOL. He says that organizers are pleased with Hara Arena and want to keep the show in the area. Also, that no other local venue can comfortably hold Hamvention at its current size. This says Matthews, makes a move unlikely.

A story in the May 2nd ARRL Letter said exhibitors would prefer the show to be held in Columbus if Hara wasn't available. Indianapolis and Cincinnati were also listed as possible sites.

When asked by the Dayton Daily News, Matthews said that the article doesn't mean Hamvention organizers are looking for another site. But says KB8GOL, organizers do have contingency plans that would move the convention elsewhere if Hara couldn't host it.

Will Hamvention 2004 be at the HARA Arena? We should know more by Sunday the 18th when Hamvention 2003 comes to an end.

I'm Henry Feinberg, K2SSQ. Bill.

--

Thanks Henry.

**

HAMVENTION 2003®: SOCIAL HOUR WILL HONOR AWARD WINNERS

Now turning to the social side of Hamvention 2003 -- and after all -- the Hamvention is a major social event -- there is some very good news. Seemingly taking a cue from the highly successful ham radio cocktail hour at the National Association of Broadcasters convention, the Hamvention will host a similar gathering this year. As Hamvention General Chairman Pat Neff, N8IGS, told RAIN's Hap Holly, KC9RP, this gathering is to honor the Hamventions award winners:

--

Neff: "Theres going to a an award winners reception at HARA on Saturday.

Its going to start at I believe 6′ o’clock and it will be within two of the largest forum rooms that will be converted. But its only going to have a capacity of about 450 people.”

--

In addition to drinks and horderves what else can those buying tickets to this gathering expect?

--

The award winners will be giving acceptance speaches there and, like I say, its going to be an informal to-do that will allow the average attendee to be able to possibly get to talk with the award winners as well.

--

Neff says that the decision to hold the reception at the Hara Arena came as the result of feedback from past Hamvention attendees. Many said it was hard to spend the day at the show and then travel across town for a banquet. With the banquet now history and an informal reception at the Hara taking its place, those wanting to attend need only buy a ticket and hang around. We will.

For the Amateur Radio Newsline, Bill Pasternak, WA6ITF.

--

Amateur Radio Newsline has a team of reporters in Dayton and will provide full covering of Hamvention 2003. (ARNewsline™)

HAMVENTION 2003®: BIG HAPPENINGS IN DX

Still with Hamvention news, this years D-X forum should be one of the better ones in recent histoey. So says moderator Jay Slough, K4ZLE, who adds that the scheduled speakers are a really impressive line up. For instasnce, Daily D-X Editor Bernie McClenny, W3UR, will be talking on the recent AH3D operation. And Al Hernandez, K3VN on hand with the ZL7C story. The ARRL’s Wayne Mills, N7NG with a DXCC update, and if thats not enough, Tedd Mirgliotta, KB8NW, will be on hand to present the Northern Ohio DX Association Award for the 2002 DXpedition of the Year. It looks like there will be something for everyone at

Hamvention 2003. (OPDX)

**

RADIO LAW: HR-1478 GETS SUPPORT FROM CQ MAGAZINE

CQ Magazine has joined the ARRL in asking hams to support House Bill HR-1478. This is the measure re-introduced by New York Congressman Steve Israel to expand the limited protections of "PRB-1" to homeowners' associations and restrictive covenants.

According to the ARRL, the 2002 version of the bill died without action. The new bill initially had 13 co-sponsors from both parties including the only two known hams in Congress. They are identified as Representative Greg Walden, WB7OCE, of Oregon and Representative Mike Ross, WD5DVR, of Arkansas.

The ARRL and CQ are both now encouraging amateurs to contact their representatives in Congress to request that they support and even co-sponsor the bill. (CQ)

**

ENFORCEMENT: PIRATE BROADCASTER SENTENCED TO JAIL

A Florida pirate broadcaster will spend the next nine months in a federal prison. This is the sentence handed down by United States Magistrate David A. Baker against Rayon Sherwin “Junior” Payne.

Payne’s conviction is the result of an investigation that began in February of 1999. About that time the Commission’s Tampa Office began receiving complaints from residents and broadcasters in Orlando of interference to the reception of licensed broadcast stations. The investigation lead them to Payne’s unlicensed station after which he was charged with multiple counts of operating an unlicensed FM radio facility.

Payne pleaded guilty to two of the counts before Magistrate Baker who also sentenced him to one year supervised release in addition to the jail time. Once he is released Payne must perform 50 hours of community service and must not violate any Federal, State or Local laws of the Communications Act of 1934.

The FCC announced the sentence on Monday May 12th. The case was prosecuted by the United States Attorney’s Office for the Middle District of Florida.
(FCC)

**

ENFORCEMENT: AN EXPENSIVE LESSON FOR MICHIGAN HAM

The FCC has told a ham to pay a $12,000 fine for willful and repeated interference, broadcasting of music and failing to identify with his call sign. Being ordered to pay is Scott E. Kamm, N0UGN, currently of Souix City Iowa but who had his statiion licensed to the town of Waterbury Nebraska when he was first cited.

As previously reported, last December the FCC T-hunted down a strong signal on the input to a local repeater to Kamm’s Waterbury Nebraska residence. Agents then performed a station inspection where they found a two meter transciever set to the repeaters frequecy pair. But Kamm denied any knowledge of the jamming, telling the inspectors that he never transmitted on the system and that the radio gear was used for monitoring purposes only.

But the FCC refused to buy Kamm’s story. On January 24th of this year the regulatory agency issued Kamm a Notice of Aparenlt Liability in the amount of $12,000. Kamm never responded to it. And so a few days ago on May 7th the FCC affirmed its earlier order and gave Kamm 30 days tio pay up. (FCC)

**

ENFORCEMENT: $2400 FINE FOR UNREGISTERED TOWER

The FCC has also issued a $2400 a monetary forfeiture to Morris Communications, Inc. of Greenville, South Carolina for failing to register an antenna structure. The FCC calls this one a willful violation of Section 17.4(a) of the Commission's Rules.

On July 8, 2002, the Atlanta Office issued Morris a $3,000 forfeiture notice for failing to register its antenna structure in willful violation. In its response, Morris admits that its tower was not registered, but argued that the forfeiture should be rescinded because it did not “willfully” violate the rules.

Morris claims that it made two good faith attempts to register the structure in 1999, but the Commission first rejected its application on erroneous grounds and later returned it without explanation.

But says the FCC, the Rules provides that, effective July 1, 1996, the owner of any proposed or existing antenna structure that requires notification to the Federal Aviation Administration must register the structure with the Commission. Abother section of the Rules provides that the owner of an antenna structure that had been assigned painting or lighting requirements prior to July 1, 1996 must have registered the structure prior to July 1, 1998.

Morris admits that its Adrian tower was not registered at the time of the inspection on May 7, 2002. Accordingly, the FCC says that that Morris violated the Rules and has ordered it to pay the fine. The entire fionding is on-line at: http://hraunfoss.fcc.gov/edocs_public/attachmatch/DA-03-1366A1.doc (FCC)

**

RADIO RULES: FCC RESOLVES COMMERCIAL BROADCAST SPECTRUM ISSUE

The FCC has released new procedures to allocate and license the commercial F-M broadcast band. This, where conflicting commercial and noncommercial uses are proposed. Since most new F-M and T-V channels can be used for commercial purposes and would be affected by non-commercial proposals, the CGC

Communicator says that this decision may have widespread implications. (CGC)

**

RADIO RULES: FAA TO SEND CLEARANCE DATA TO FCC ELECTRONICALLY

According to a Primedia trade publication, the Federal Communications Commission and the Federal Aviation Administration have announced that tower and antenna airspace clearance data from the FAA will now be transferred electronically to the FCC. This will enable the Commission to process antenna structure registration applications faster and more accurately, and will save staff time at both ends. The electronic transfer of data is also expected to reduce the time it takes to get this information into the FCC's database from one to two weeks to only one day. More information is opn the web at http://beradio.com/ar/radio_currents_24/index.htm#tower1 (CGC)

**

HAM RADIO PUBLICITY: NPR FEATURES “HELLO WORLD - A LIFE IN HAM RADIO”

Tom Walsh, K1TW, reports over the Internet that National Public Radio featured ham radio in a recent Talk of the Nation segment. Walsh says that the final 15 minutes of the two hour program on April 30th was devoted to the new book "Hello World - A life in Ham Radio” and even featured callers including someone who is a QSL manager.

Tom says that you can still hear the program. Just taker your web browser to the National Public Radio archives and bring up the April 30 version of Talk of the Nation. Go to the second hour, find the last 15 minutes, turn your speakers up and enjoy. The URL is www.npr.org/programs/totn/index.html>http://www.npr.org/programs/totn/index.html (K1TW, K1KI, others)

**

NAMES IN THE NEWS: W9GIG TO DEPART THE IRA

ARRL Central Division Director Dick Isely, W9GIG, says that he will not stand for re-election to an official position within the Illinois Repeater Association. Isley has been a guising force within the repeater council for years.

It was Isley’s guidence that helped to create the National Frequency Coordinators Committee several years ago. He has also served with ther Illinois Repeater Assochiuation for many years and has become a main stay in the repeater coordination community.

According to his departure announcement, the decision to stand-down has nothing directly to do with his position within the ARRL but he says that does want to put more of his time toward League matters. Isley says that he has thoroughly enjoyed working for the Illinois Repeater Association but feels that it is time that new people step up to leadership positions. He also wished the group continued success in its work of providing efficient and fair Amateur Radio repeater frequency coordination to the hams of Illinois. (Via E-Mail)

THE IRAQ WAR: WHO IS ACCEPTING WHAT POST-CONFLICT OPERATIONS

With the war in Iraq now just about over, both CQ and the ARRL are accepting certain operations from that nation for their DX award programs. But there are some differences. Amateur Radio Newsline's Bruce Tennant, K6PZW, has that part of the story:

--
PKG HERE
--

Most observers believe that the situation regarding ham radio in Iraq is very fluid and criteria for operations will change. (ARRL, CQ, others)

**

INTERNATIONAL - AUSTRALIA: NEW 23 CM BEACON

VK4RTL experimental 23 centimeter beacon on air neat Townsville Australia. It weent on the air on 21st April on 1296.444 MHz at Mount Stuart for a trial run. Q-News reports that this mighty little beacon puts out a massive 2.5watts and can be heard on most modern tri-band handhelds around Townsville and Thuringowa. Reception and range reports go to vk4wit@wia.org.au (Q-News)

**

INTERNATIONAL - CANADA: CANADIAN SPECIAL PREFIXES.

Industry Canada has authorized the use of "Special Event Prefixes" between May 24th and July 27th to celebrate the 50th Anniversary of the National Library of Canada. The special prefixes are C-K for all V-E's, C-J for all V-A's, C-Y for all V-Oh's and C-Z for all V-Y's. The special prefixes will therefore be available for use in the upcoming C-Q W-P-X C-W Contest on May 24 and 25th.

**

INTERNATIONAL - ITALY: WOULD YOU LIKE TO FLY IN MY BALLOON

Remember the 1970's song Up-up and Away by the 5th Dimension? Well a ham radio group in Italy has come up with a 21st century Amateur Radio version of just such an event.

The Milan Chapter of the Italian Amateur Radio Society says that its planning a manned Amateur Radio Balloning Experiment to take to the sky on Saturday, May 17th from Mantova Airport. Operating on 144.330 Mhz upper sideband, the in-flight operation is slated to begin between 08:00 to 09:00 U-T-C and last between 1 and 3 hours. A-P-R-S will be used to track the balloon during the time its aloft.

More information on the flight is the groups wesite. That information appears on the groups website at www.arimi.it/rubriche/arbe.html (IT2SAI)

**

ON THE AIR: GRID CIRCLEING ROVERS WANTED

N9REP says over the VHF Reflector that the K9RN VHF Contest Group is now accepting applications for captive rovers during the June VHF/UHF contest. Wendell says that the terrain in and around grid square EN52 is very rugged and harsh and that the first requirement for rovers is a vehicle capable of handling any on-or-off road QSO task, particularly regarding grid circling.

Any team wishing to be a captive rover must supply their own approved vehicle. A list of vehicle manufacturers that appear to meet all of the demanding Rover specifications is at www.maximog.com (VHF Relector)

**

DX

In DX, word that the make-up of the CY9 DXpedition team is now complete and the operation will take place from July 24th to August 2nd. The team members are N0RN, N5VL, W0IZ, KO4RR, K5AAH, K5AB and VE7SV. They will be taking with them a Battle Creek Special and will operate on the low bands during all openings. Callsign will be given either at the beginning of the operation or shortly before. QSL via N5VL. (OPDX)

**

THAT FINAL ITEM: ITS T-HUNT TIME

And finally this wee, do you like hidden transmitter hunting? If you do then this one is for you. Here's Joe Moell, K0OV, has the latest information on the World Amateur Radio Direction Finding Championship games that are coming up.

--

Who are the best transmitter hunters in the country? That's what we'll find out when the Third USA ARDF Championships get under way near Cincinnati, Ohio on July 30. The sponsors, OH-KY-IN ARC and the Cincinnati Orienteering Club, promise two challenging radio-orienteering courses. One will be on two meters, and the other on 80 meters. This is a test of individuals, and it's all on foot. You'll have five transmitters to find each day, negotiating your way through the forest with your map, compass and direction-finding gear. If you can walk or jog a 10 km racecourse, you have the stamina to complete an ARDF event. If you're a senior citizen, don't worry about being trounced by teenagers, because there are a total of nine age categories, five for men and boys, four for women and girls.

This year, the USA Championships are an international event, combined with the International Amateur Radio Union (IARU) Region 2 ARDF Championships. If past events are any indication, there will be plenty of international experts in the sport on hand, so you'll have a chance to learn foxtailing tips and techniques from the very best. Positions on ARDF Team USA to next year's World Championships in the Czech Republic are open, so perhaps you can earn a spot for yourself. We're looking for good candidates in all age/gender categories, so encourage your kids and grandkids to give it a try.

For the most intense experience, stay in the dorms at Miami University of Ohio, in close contact with the other competitors. But space is limited, so now is the time to make plans. You can stay elsewhere nearby if you like. In either case, time is getting short, so get registered at the Championships Web site: www.ardfusa.com That's ardfusa.com

For lots more on foxhunting, including equipment ideas and techniques, go to www.homingin.com. Read about past USA Championships and get a link to this year's. That's one word "homingin" --- homingin.com.

From southern California, where there's some kind of transmitter hunt almost every weekend, this is Joe Moell, Kay-zero-Oscar-Victor, for Amateur Radio Newsline.

--

Don’t worry if you missed those websites Joe mentioned. You will find them I the print edition of this weeks Amateur Radio Newsline report. (K0OV, ARNewsline™)

Subject: Mobile hamming could be "Reckless Driving" in NJ!
Message-ID: <20030520001804.28736.00000298@mb-m02.aol.com>
Xref: archiver1.google.com rec.radio.amateur:5265

Found this in the Berkely reporter on May 15, 2003 and posted it to Eham.net (http://www.eham.net/articles/5537). Please forward this to all NJ hams that you guys know:

I was looking through my local paper recently here in New Jersey and found a disturbing article. It appears New Jersey law makers are attempting to expand the definition of "Reckless Driving" to include things such as eating and drinking, but of real interest to hams, talking on 2 way radios is also listed! If this were to pass, the mere act of talking on a local repeater or working a little mobile SSB on HF would be a "Reckless Driving" charge for the unsuspecting ham!

"In an efford to reduce motor vehicle accidents caused by driver distraction, the state Assembly Transportation Committee has released a bill to better define what is and what is not considered to be reckless driving."

"The proposed legislation says distracting behavior includes: the use of communications technology such as cell phones, pagers, fax machines, locating devices, AM/FM, dispatch and citizen('s) ban(d) radios, compact disc, tape and video players."

I know I do not need to tell my fellow "Jersey hams" what to do! Start sending out those emails, start writing those letters, and start dialing those phones!

US Hams can operate CW from 7000 to 7300, the generally agreed to band
plan permits RTTY and Data from 7000 to 7150. US Hams can operate CW
anywhere in the ham bands.

This and more can be found at:

http://www.arrl.org/FandES/field/regulations/allocate.html

Bit boring that circuit :-).
How about this one ...
If you add another cap and juggle the other bits about, then magically the
circuit will now selectively *step up* the input voltage. (measure at point
"A"). Not a lot (8%ish), but would make an oscillator etc.

The answer is (obviously) NONE. As per the prompt replies when you
originally posted it in this form. And John Popelish's latest reply.

It seems fairly clear that the interesting, correct problem was the
one that you restated in
news:2oua8vo780mk9ftuvhbbhpagd7q79g1puu@4ax.com
i.e:
"What is the lowest frequency for which 90% of the voltage that
appears across the 30k resistor will appear across the three furthest

right resistors?"

(BTW, why in heaven clutter the problem with those 3 parallel resistors? It seems strange to mix relative complexity with such trivial simplicity in the same problem...)

I restated *that* problem, the one I studied, as:
"At what frequency does VR/VL = 0.9, where VL and VR are the AC voltages on the left and right sides of the capacitor respectively, sourced by some (arbitary) sine wave voltage Vin at the left of the 10K resisor."

Unfortunately, that version wasn't accompanied by a corrected schematic, although one was easily generated from your correction 'Please ignore the unlabeled resistor - it shouldn't be there.'

But carelessly muddying the water again, around the same time you also posted a corrected schematic in
news:q8ua8voaqne9jagqgcbp5hb7f5utf91f0n@4ax.com

However, that was accompanied by the earlier *incorrect* statement of the problem!

Anyway... if I take the happy combination of the 'correct' schematic with the 'correct' text, then my simulation with CM 2000 agrees with your result of around 3.25 Hz.

Sorry Terry, you're right. I'd been out on the beer last night and
obviously got a bit confused. :-(

>"A"). Not a lot (8%ish), but would make an oscillator etc.

In other words, "If you start from scratch with a completely different
circuit you can build an oscillator." :-)
Calm down, John, there's nothing magical about oscillators, but IIRC,
you need quite a bit more than 8% fed-back to a get self-sustaining
action.

I'm looking to expand the listing of 2 meter nets on my webpage and was wondering if anyone knew of any 2 meter simplex nets (there's just too many on repeaters to list).

If you know of any, please email me (by removing "spamsux") with all
information to include the time in UTC/GMT.

(snip)

I still see little justification for this statement of the question.
I am not sure Paul realizes that as frequency rises, the attenuation
between Vin and the top of the 30k resistor is rising, while the
attenuation between Vin and the top of the 10k is falling.

I'm happy to be given the chance to do so, Ben. I've finally tracked down the *original* question from the standard text book, 'Electronic Principles' by Malvino (McGraw/Hill). It appears at the end of chapter 9. Looks like I got the circuit correct, but the actual *wording* of the question wrong - but before anyone starts to slate me, how much would *you* remember in detail from 1980?
I'll post the question in full later shortly. I don't have it to hand right now and don't want to make any further errors. This time it's from the horse's mouth...

This circuit can oscillate; I accidentally did this a long time ago
with essentially this circuit connected to an emitter follower. I was
mystified at the time, because I thought that no RC circuit could make
an emitter follower oscillate. The circuit was a clever - too clever -
pseudo-inductor used in a 'phantom power' pickoff circuit for an
aircraft interphone system.

John

In fact I'll start a new thread from scratch on the subject in view of
the amount of variations we've had on interpretation so far...

FS: DESOLDERING WORKSTATION
This is an A.P.E. (Automated Proeducts Equipment Corp.)
soldering/desol.dering workstation. It is in used but good condition.
Has vacuum and pressure, footswitch operated. Includes desoldering
tool with line and filter, has adjustable pressure & temperature.
There is an adjustable AC outlet on on the front panel into which you
can also plug a standard soldering iron (not included). Includes a
stand and holder for solder irons, sponge, wire brush. Also on the
front panel are connectors for "Thermtool" and "Cirkgrind Quikplate",
which are apparent plating and rework accesories for this work station
(not included). $150 + shipping. Please respond to
NOSPAMdt0124@comcast.net (and remove the NOSPAM from the address!)
Thanks!

`The other day I rolled up the excess rg58 cable that is within my
basement. There seems to be a decrease in the amount of RF within the
shack. I simply rolled into approximately 8 inch diameter.

Is there a better way to do this that might improve upon the choking action ?

TIA
73, de ~ Vince ~

============================

You could put the choke outside the house and just have a short length of coax in the basement. With luck you may completely remove ALL the RF from the shack.

The choke will behave even better if you neatly wind the coax, turns touching, on a length of 4" diameter plastic pipe like a big tuning coil. This reduces the capacitance between the ends of the coil. Stray capacitance bypasses the choke.

Used and working Autek QF-1A ssb/cw/am tunable audio filter. In very good working condition. No scratches, just been sitting on the shelf for a few years. Selling due to no use for it. No manual but available through Autek's website or used market. Asking $30 and buyer to pay for shipping and insurance.

Contact Denis W1WV@attbi.com for more details.

In 2000 they changed the whole system, simplifying it quite a bit.

There are now 3 1/2 license classes (although the old ones can be
renewed), and 4 test elements.

Element 1: 5 wpm Morse code test
Element 2: Technician, 35 question multiple choice written test
Element 3: General, 35 question multiple choice written test
Element 4: Extra, 50 question multiple choice written test

Technician: pass Element 2
Technician w/HF: pass Elements 1 and 2, same as old Tech Plus but not

```
listed that way in database
General: pass Elements 1, 2, 3
Extra: pass all 4 Elements.

You will need to have your current license with you, and pass Elements
1 and 3 to become a General.

Happy trails,
Gary (net.yogi.bear)

You'll need to study for the General Written exam (element 3) and take a 5 wpm
code test.

Good luck with the upgrade!  It's well worth the effort!

More turns, smaller diameter... or add ferrites. I've always used 8-10 turns
on a 6" diameter form on coax entering the shack.

From The ARRL: http://www.arrl.org/FandES/ead/classes.html

Technicians may upgrade to General Class by passing a 5 WPM Morse code test
and a 35-question multiple-choice examination. The written exam covers

intermediate regulations, operating practices, and electronics theory, with a focus on HF applications.

In addition to the Technician privileges, General Class operators are authorized to operate on any frequency in the 160, 30, 17, 12, and 10 meter bands. They may also use significant segments of the 80, 40, 20, and 15 meter bands.

The question pool is at URL: http://www.arrl.org/arrlvec/pools.html

Good Luck

Way back in the late 70's/early 80's, I was know as WD9FZR. I've long since
let my General ticket lapse. Is there a way to renew without re-testing?
The written probably isn't a problem but the 13WPM I needed back then has
long since left me.

Just wondering,

Tom

Nope the 2 year grace period has expired, but code these days for ALL licenses is 5 WPM including Technician General and Extra. However there is a Technician no code license VHF and Up. The Advanced class is no longer available.

See URL: http://www.arrl.org/FandES/ead/classes.html

Many ARES/RACES groups have been giving thought to practice with 2M
simplex. In Eastern Mass, it has been added into Field Day for
certain.

Happy trails,

```

Each NWS office has their own schedule and set up for this testing.

Go to: http://www.nws.noaa.gov/ and click on your area to get to the
local NWS office. Searching through that site under "weather
broadcasts" or similar will tell you what you wanted.

Also see: http://205.156.54.206/nwr/nwrsame.htm

Happy trails,
Gary (net.yogi.bear)

If it's been more than 2 years since your license has expired, you
must retest. The good news is that the CW requirement is only 5 WPM.

>>
>

Go to the ARRL home page http://www.arrl.org and click on 'public
service' - You'll find a PDF file of ALL the nets that are registered
with the ARRL.

FS: DESOLDERING WORKSTATION
This is an A.P.E. (Automated Proeducts Equipment Corp.)
soldering/desol.dering workstation. It is in used but good condition.
Has vacuum and pressure, footswitch operated. Includes desoldering

tool with line and filter, has adjustable pressure & temperature.
There is an adjustable AC outlet on on the front panel into which you
can also plug a standard soldering iron (not included). Includes a
stand and holder for solder irons, sponge, wire brush. Also on the
front panel are connectors for "Thermtool" and "Cirkgrind Quikplate",
which are apparent plating and rework accesories for this work station
(not included). $150 + shipping. Please respond to
NOSPAMdt0124@comcast.net (and remove the NOSPAM from the address!)
Thanks!

I'll do that. It seems the ARRL is having a problem with their website right
now. When I try clicking on any of the menus (operating activities, Services,
etc...) nothing happens. I'll give it a try again later.

You must pass element 2 to get a valid tech license, then you can be grandfathered to general. Contact the ARRL VEC division, and they will explain it to you.

73
----

http://frwebgate.access.gpo.gov/cgi-bin/get-cfr.cgi?TITLE=47&PART=97&SECTION=505&YEAR=2000&TYPE=TEXT

From FCC web page, VEC newsletter:

* Any FCC-granted Technician Plus license (current or expired) is valid for 5 WPM Element 1 credit. Also, any Technician license issued after April 12, 1991, together with a CSCE issued between February 14, 1991 and July 1994 showing a Morse code credit (this covers people entitled to a Tech Plus license, but for whatever reason their license class was not appropriately updated at FCC when the Tech Plus License was implemented by FCC in June 1994). A Callbook listing, FCC Verification Letter or ITS Certification is also acceptable.
* Any current or expired less than 5 years FCC Commercial Radiotelegraph license or permit is valid for 5 WPM Element 1 credit.
Claiming grandfather credit -
Grandfather credit can only be claimed if the applicant is a Technician class licensee, or can only be claimed after the applicant passes the Technician class license exam or has valid credit for

having passed the exam.
Remember: FCC does not offer any
grandfather credit to any former holder of
a now expired and beyond grace period
General, or Advanced, or Extra class
license based on holding that higher class
license. FCC says that many former
higher license class holders may be eligible
for grandfather credit assuming
they had at one time held a Novice or
Technician class license.
In addition: Included with your test
session results (when sent to the ARRL
VEC) must be copies of EVERY CSCE or
other document your team accepts as valid
for exam element credit! Also remember
that every person who takes a code test
is required to complete the applicant info
section at the top of the code copy
sheet, even if nothing was copied, and that
the copy sheet must accompany that
persons test results. And as a procedural
change, please use paper clips (rather
than staples) to assemble each applicant's
documents.
request that a copy be supplied (including
the requirement in your public
announcements)--for license verification
purposes and for forwarding to the ARRL
VEC with the test results. What if a license
amateur does not have or does not
bring a license (or copy)? In such cases,
serve the examinee and we at the ARRL
VEC will verify the examinees claim after
the test session--or a verification
via the internet can be accepted. Do not
turn any applicant away for lack of a
license original or copy.

Hi Tom--

Did you previously have a Novice license? Or a Technician?

Under 97 CFR 97.505(a)(5), an expired Novice license will get you credit for the current Element 1 (the 5 wpm code test).

Under 97 CFR 97.505(a)(8), an expired Technician license will get you credit for the current Element 3 (the General Class written exam).

I think this is STOOPID, but an expired General, Advanced, or Extra class license gets you nil-- zip-- nada.

You must be able to show the actual expired license(s), not ancillary proof such as a callbook entry. You could then get a General license by taking only Element 2 (the Technician Class written exam) which is far, far easier than any of the exams in the old days.

You no longer get tested by the FCC, but by local VE's (volunteer examiners). Go to www.arrl.org, and in the banner at the top click EXAMS to find all the upcoming VE sessions within x miles of your zipcode.

While at www.arrl.org click LICENSING to view the question pools from which the exam questions are taken. (Some get their licenses by memorizing all the questions in the pool, not by learning radio as we had to in the old days.) You can take simulated exams (with questions from those pools) on www.qrz.com.

I made a re-entry into radio two years ago after 30 years away. I was surprised to find that I could still copy code well enough to pass the 5 wpm test with virtually no practice. Don't be so sure yours has left you.

Tom--

In my previous post when I told you that only the actual license would serve
as proof--

I'm happy to report that I was mistaken. Go to
http://www.arrl.org/arrlvec/grandfather.html
for the full story.

Thanks for the information, OMs.

I have cardboard forms with 1.5, 2, 3, and 4 inch diameters to experiment with. Now that I think of it, the balun-choke used with a beam antenna years ago had a diameter of approximately five inches. I will measure the casing, if I am able to find that.

There is another coil of rg58 cable now located outside my house and about 20 feet from the antenna feedpoint. The closest choke is still approximately 30 feet from the rig. The antennae are fanned dipole wires cut for 40m, 30m, and 20m.

If / when the antennae come down to ground level, I will relocate this rf choke at the feedpoint.

Thanks again.

Tom,

If you ever held a Novice License you can get credit for the code test (I don't understand why credit ONLY for the Novice).

You need a copy of your old ticket, or if you don't have that a copy of the page and a copy of the front cover from that years callbook. That will give verification of have had taken the 5WPM test way back when.

HTH.

Having recently purchased another amp, I must now sell my Ten-Tec Centaur amplifier. The amplifier is less than 5 years old and is in near perfect condition, new from the factory in 1997. I am the original owner (non-smoker). The amp has been very sparingly used and probably has less then 10 hours total "on" time on it. Much less transmit time...

The Centaur utilizes 3 each Svetlana ceramic based 811A tubes and it is currently wired to operate on 240 volts. It is

easy to rewire for 120 volts. It draws about 11 amps of current at 120 volts max. and makes 600 watts output +/- depending on antenna match and the band from 160 through 10 meters (WARC bands included). The Ten-Tec 10/12 meter mod has been installed. The amplifier loads easily and is easy to tune. Another BIG plus is that the amp will interface with any radio however it is designed to do QSK with Ten-Tec products using their usual EN OUT hook-up. 811A tubes are still economical and easy to find should you ever need replacement. Or, you can replace the 811As with three matched "RF PARTS/SVETLANA 572B"! (Note: 572B is a direct drop-in replacement for an 811A.) Using 572B resulted in the tubes LOAFING along at 600 watts - and also resulted in REDUCED drive requirements on the upper bands and with a REDUCTION in plate current. I have the original manual and is included. The amp originally sold for $749 plus shipping and I am asking $500.

Check out the reviews on eham.net at http://www.eham.net/reviews/detail/155
Or the ARRL Product Test done in JUNE 1997.

Would like to sell in the Northern Virginia Area, since I do not have the original Ten-Tec shipping boxes. However, I will be driving to Boston, MA on Friday 18 April 2003. I can drop it off along the way, if need be. I will also be driving to the Dayton Hamfest in May.

Thanks,

Kent Hufford

I just acquired a TH28A Kenwood handheld and it did not come with an
operating manual.  Can anyone tell me where I might be able to get a manual?
I don't want to mess up the programming.

Thanks, Dennis Wyman (KA6GDT)

I've read a couple of messages about running higher power (i.e. 100W) under a ham license on 2.4GHz 802.11b rather then the much smaller output allowed for non-licensed use. But a number of questions occur to me:

    How would you meet the identification requirements?
    What about WEP or other encryption protocols?
    How would you reach that kind of a power level?
    Home brew something? Linear amp?

73's

Would you like some advice?  Ask him.  Hams are *very* particular about
their radios.  Save the element of surprise for something less important.

Hi All,

I am looking for some information on what I would need to be able to legally use a two-way radio in the 5 watt + power range. I am moving to a rather rural area in the US with a lot of trails and wilderness. I would like to be able to use a two-way radio to communicate with my family back at home if I am off fishing or hunting. When I was younger I worked in the EMS field and I had a nice two-way radio that had a selectable power toggle (1/5 watts, I believe). We used the 1 watt setting for talking at an accident seen to other EMS personnel and the 5 watt setting to communicate to dispatch via a repeater, I believe. It would be very nice if I could use a similar type of radio to communicate with my home while I am out on the trails. I have looked in to FRS & GMRS radios but their range seems to be pretty low. I was hoping I could get something more powerful.

So that brings me to look into what the FCC allows for personal use and if they would even allow me to use a more powerful transceiver. Do they assign frequencies to FCC licensed users? Any feedback/help would be most welcome. Thank you.

- Derek

In the amateur bands, no one has an assigned frequency. There are
repeater coordinators who work so that everyone with a repeater
voluntarily avoids interference.

You might look into the amateur radio band at 2 meters VHF. For this,
you and all others transmitting would need to pass the FCC Technician
exam, which is not extremely hard.

See: http://www.arrl.org/hamradio.html

Happy trails,

Peet Bros. weather station (Ultimeter 2000).

Great condition and guarenteed not to be DOA.

Includes display, accessory hub and HEATED anenometer.

http://www.peetbros.com/HTML_Pages/part1.htm#ultimeter2000

This unit retails for $379 and the heated upgrade is an additional $39.

Asking $320 O.B.O.

Please e-mail off list if interested.

Thank you,

John

On my transciever, assuming the cw recieved audio frequency is set for 800hz (typical default for many), you can zero beat by turning off your VOX and keying the rig (should be no transmit)....... then turning the dial until the keyed tone matches exactly the recieved tone.

I could show you easier than tell you.... essentially you want to be in recieve mode, in CW, and be able to 'key' the rig without transmitting (different rigs have different ways of doing this, some won't).

Well I didn't mean "how to do it" I was interested in "how it works".. I hear things like "The receiver listens down (or up) from the dial reading etc..." and I don't understand what's going on.

Hi,

I'm looking for a copy of the booklet that originally came with the Standard CSA240 (or any other literature).

I bought it hoping that I can use it to charge the CNB-151 and 153 batteries for my Standard C158 HT (bought used last year, with no charger)- however, the warning sticker on the side of the unit states that it should only be used for charging CNB-240 / 241 / 242 / 243 batteries. Seems odd, as this charger has an adjustable plate (and slots for it marked A through F) that would accomodate an awful lot of different battery sizes! The electrical contacts in the unit and their polarity match my batteries exactly.

A schematic would help too, if someone has one - that's one complex
circuit board in this thing!

Thanks, Ed

NOT SURE ABOUT YOUR CSA240 CHARGER

BUT WITH MY STANDARD C 168 I HAVE THE CSA160 WHICH IS THE MATCHING CHARGER
IT HANDLES MY 7 VOLT AND 12 VOLT BATTERYS   MICRO COMPUTER CONTROLLED
RAPID OR TRICKLE CHARGE

I WOULD THINK WITH THE VOLTAGE AND POLARITY BEENING CORRECT IT SOULD BE FINE

STANDARD HAD THE ODD FACT OF THAT ITS JACKS ARE REV POLARITY LIKE THE BARRLE
JACK ON THE SIDE WHERE YOU CAN PLUG 12VOLTS INTO   THE OUTER SHELL IS PLUS
WHERE MOST JACKS LIKE THIS THE OUT SHELL WOULD BE NEG ?
HOPE THIS HELPS JOE

Some answers to questions you might have...

1- The battery is original and has very little use. I purchased the H/T more for listening than transmitting. It is a BP-173, 9.6v and 650mAh.

2- The radio has never failed and I guarentee it to NOT be DOA.

3- The radio has been babied, it has never been dropped and never in a smoking environment.

4- The radio serial # is 14684. It is in as new condition and, with the exception of clear packing tape over the display lens, there are no marks/dents or scratches on the radio.

The radio will be shipped in the original box with the original manual, quick reference card, wall charger, stock duck antenna and wrist strap.

5- I am selling the radio to help defray the cost of a Kenwood TH-D7A(G) I just purchased.

6- I don't have access to a digital camera, I cannot provide photo's.

Although I haven't sold many things, I have a good eBay rating (see NPDXO) .

$190.00 + shipping from 11786

Amateur Radio Newsline™ Report 1337 March 28, 2003

Amateur Radio Newsline report number 1337 with a release date of Friday, March 28 2003 to follow in 5-4-3-2-1.

The following is a Q-S-T.

Keeping a repeater on the air in New Zealand could become very expensive and Australia considers complete restructuring of its Amateur Radio service. Find out the details on Amateur Radio Newsline report number 1337 coming your way right now

(Billboard Cart Here)

**

RADIO REGULATIONS: NEW ZEALAND MAY START REPEATER LICENSE FEES

Ham radio operators could soon be paying a lot of money to keep a repeater on the air in New Zealand. This as government regulators down-under look at instituting a new license fees that could make keeping a system on-the-air prohibitive for many clubs that sponsor multiple machines. Amateur Radio Newsline’s Jim Meachen, ZL2BHF, is in Auckland New Zealand with the rest of this breaking story:

--
NZART stands for The New Zealand Association of Radio Transmitters and it is the official national ham radio society here in New Zealand. It also functions much the same as the ARRL in the United States and is a member of the International Amateur Radio Union.

NZART has received proposals from government telecommunications regulators that could cost hams in this nation a lot of money just to stay on the air. What the New Zealand regulators want to do is go to lifetime licensing with a one off license payment, That’s the good idea. But there is more.

Regulators have also proposed fees for repeater and beacon licenses that are just plain unacceptable to NZART or the New Zealand ham radio community. Right now there is no repeater or beacon license fee. Under the proposed revision, there would a NZ$250 initial fee to put a one on the air and an on-going annual NZ $200 charge per system to keep it on the air. Currently the NZ to US Dollar exchange at just under 2 for 1.

The current no fee for beacons and repeaters was introduced some years ago for good reason. This proposal is a very significant policy change with what NZART says are serious and unacceptable implications. This is because, by definition and by international agreement, the Amateur Service is non-pecuniary and by international agreement cannot be used for money-making. Unlike other services that can pass on costs to others, in the world of Amateur Radio, there are no "others". As a result, the NZART
intends to oppose this one, all the way.

Reporting from below the Southern Cross in Auckland New Zealand, I’m Jim Meachen, ZL2BHF, for the Amateur Radio Newsline.

--

An example of what Jim was talking about? Since each repeater would pay the $200 license fee, a club with 5 systems -- which is quite common -- would be paying $1000 New Zealand dollars every 12 months. (NZART)

**

RESTRUCTURING: WILL AUSTRALIA CHANGE ALL?

The debate in Australia about the need for a new Entry Level license has now been expanded into a call for the review of the entire amateur licensing system. Q-News Graham Kemp, VK4BB, in Brisbane is here with the details:

--

A research report entitled "Amateur radio and the challenge of change" has been co-authored by Jim Linton VK3PC and Roger Harrison VK2ZRH. Here is Jim Linton VK3PC giving a summary report of the Linton-Harrison Paper 2003.

--

(Note: This is an expanded version of what is found in the audio newscast)

VK3PC: “Amateur radio is at the crossroads, it can continue straight ahead down hill and virtually disappear, or set its own path by changing the amateur licensing system.

The time to act is now. When the UK Foundation License was introduced at the beginning of last year, there was not instant support for Australia to take a similar approach. However, some 15 months later there is majority support for a new license in Australia.

What the Linton-Harrison Paper 2003 does is to refocus the debate on the entire licensing system in Australia, the types of licenses, the syllabuses and examinations. We must not be tempted to simply copy the UK Foundation License. It does not meet Australian conditions and needs, and will not provide the necessary sustained growth for amateur radio here.

Australia's new Entry Level License should not be strictly an "operators' license" - a simple permit to use a type-approved transceiver. Entry Level Licensees should be able to enjoy the thrill and satisfaction of operating a radiocommunication system under as many circumstances and conditions and on a wide variety of bands across the RF spectrum as they wish to explore. This should be in keeping with long-standing amateur radio tradition and in line with the ITU definition, which says amateur radio exists for the purpose of self-training, intercommunication and technical investigations.

There will be changes to the licensing system as a direct result of the World Radiocommunications Conference in Geneva later this year where the mandatory Morse code testing requirement is to end.
The amateur radio community and the Wireless Institute of Australia must be ready to take action to revitalize the amateur radio licensing system at the earliest opportunity.

If the right action is not taken, the decline of amateur radio that the Linton-Harrison Paper identifies as being in now its 6th year, will lead to its ultimate demise.

Again, sustainable growth is absolutely essential. It is important to encourage people into the hobby who retain their license and their interest in amateur radio. A hobby that continues to interest, challenge or reward them.

Linton-Harrison advocates a two license system. An Entry Level with a syllabus set at a basic standard, along the lines of the original intention of the Australian Novice license. An Unrestricted License with a syllabus that is revised to comply with the ITU Recommendations for amateur licensing.

The Linton-Harrison Paper describes the current Novice and AOCP syllabuses as being "bloated" and beyond what is expected internationally. The WIA Federal Council agrees.

The current Novice license standard is recognized as being too high. It should not take 40 weeks study to get an amateur license. The Novice license is equivalent to the United States Technician License.

The current AOCP examination is also not relevant to the needs of today, and is at least two decades behind the times. The Linton-Harrison Paper calls for the whole licensing structure, the examination system and syllabuses to undergo a fundamental rethink. In its 8-pages the Paper covers much more than I can in this audio report.

--

Linton and Harrison wrote a similar paper in 1985 that is still being referred to today. (Q-News)

RESCUE RADIO: THE PARTNERSHIP FOR PUBLIC WARNINGS DRAFT IS NOW AVAILABLE

Here in the United States as well as around the world, letting the public know that an emergency situation is taking place can save lives. Because of this government agencies as well as the private sector are always trying to find betters methods of issuing alerts.

Now, comes word of a draft document for a new United States national emergency warning strategy from a group called the Partnership For Public Warning. A plan that some say holds the potential to truly modernize the way the public is informed.

For those not aware, the Partnership for Public Warning is a national organization formed in November of 2001. Its Board of Trustee's include representatives from every area of public warning communications including at least one radio amateur. The stated goal of the Partnership for Public Warning is to promote and enhance efficient, effective, and integrated dissemination of public warnings and related information so as to save lives, reduce disaster losses and speed recovery.

This document they have released is said to represent the first time anyone has proposed an overall emergency warning strategy for the United States. The concepts outlined help to look ahead to more advanced warning systems than the current E-A-S, weather service products, and other offerings. After reading it, the Partnership for Public Warning invites your participation and comments. You will find it in cyberspace at: http://www.ppw.us/ppw/docs/nationalstrategy.pdf (GCC, PPW))

**

RESCUE RADIO: S.DAKOTA EMERGENCY COMMS LOOSE TOWER

The town of Mitchell South Dakota has last its 180 foot communications tower used for public safety and public radio. According to Jeff Pierce of the South Dakota Bureau of Information and Telecommunications, the tower fell Tuesday, March 18th after a ground anchor rotted and gave way.

Pierce said it knocked out State Radio communications used by law enforcement and other agencies, though nearby towers picked up that radio traffic. South Dakota Public Radio in the area was off the air until a portable tower was put up the next day but reception of weather alerts will not be possible until the fallen tower is replaced. Also, Mitchell police have not been able to use handheld radios and instead must rely on radios in their cars. A replacement tower should be installed and operational the week of April 1st. (CGC)

RESCUE RADIO: NJ HAMS RESPOND FOLLOWING PROPANE BLAST

New Jersey radio amateurs were called up following a large propane explosion in the city of Newton the weekend of March 8th. Amateur Radio Newsline's Ken Locke, N8PJN, has the rest of the story:

--

It was Robert Stepanek, N2TTT who put out the call for more assistance. Stepanek is the ARES District Emergency Coordinator of Susan County who requested assistance in the form of additional operators after a propane tank exploded in the town on Newton New Jersey on March 14th. Hams from several other New Jersey counties responded.

Amateur radios' primary role was to provide back-up relief shelter communications. Many of the evacuated residents were sheltered by the Susan County Chapter of the American Red Cross.

Pat Day is the Executive Director of that Red Cross chapter. According to Day, about 1000 residents who were forced out of their homes. Those who did not have other places to stay went to nearby shelters operated by the relief agency where some stayed until March 16th. Hams from Somerset, Union, Morris and Hudson
counties volunteered during the emergency.

For the Amateur Radio Newsline, I'm Ken Locke, N8PJN, reporting

--

Rich Krajewski, WB2CRD is the Public Information Coordinator for the ARRL's Northern New Jersey Section and provided most of the information for this story. (WB2CRD)

RESCUE RADIO: KILLER TORNADO HITS GEORGIA

Amateur Radio operators in southwestern Georgia have been helping in the wake of tornadoes that hit the region on March 20th. The storms left six people dead and over 200 injured. Georgia's Governor has declared a state of emergency in two of the hardest hit areas.

According to an ARRL Bulletin, ARES was activated in Mitchell, Worth, Lee and Dougherty counties. There, hams have been assisting various relief agencies including the American Red Cross, the Salvation Army and Georgia Baptist Disaster Relief.

ARES members of the Albany Amateur Radio Club also responded. Most of them are Red Cross volunteers. They took emergency response vehicles to the affected areas to feed victims and provide communications.

The ARRL Lee County Georgia Emergency Coordinator is Bob Smith, K4PHE. He says that several ARES members have been volunteering continuously since the tornadoes hit. (ARRL)

ENFORCEMENT: NY HAM WARNED ABOUT INTERFERENCE

A Patchogue New York ham has been told that he could face a fine of up to $7500 if he continues to violate the Amateur Service Rules. The FCC's Daryl Duckworth, NN0W, tells us who and why:

--

Duckworth: "Anthony Satornino, N2QPY, was issued a Warning Notice concerning deliberate interference with other licensees' on the 2 meter Amateur band and engaging in unlicensed operation in the 10 meter band."

--

Satornino was also asked to clarify his actual address for FCC records and to do so within 20 days. (FCC)

**

ENFORCEMENT: THE FCC VS. K1MAN - AGAIN

The FCC has again written to Maine radio amateur Glenn Baxter, K1MAN, regarding he operates his Amateur Radio station. Amateur Radio Newsline's Paul Courson, WA3VJB, is in Washington with the details:

--

In its latest letter to Glenn Baxter, K1MAN, the Commission says he has not corrected problems that prompted their letter in January, which was based on monitored information and numerous
complaints to the FCC.

The FCC claims that Baxter's Amateur Radio station is apparently being used for broadcasting non-ham radio matter including programs, talk shows, and children's shows. The agency also alleges transmissions from his station are being used for deliberate interference and for communications where Baxter apparently's trying to make money.

The FCC also notes that some of the transmissions start and stop erratically, and leave the air with no identification as required by Commission rules. An enforcement official who wrote the letter said such operation indicates the transmissions are not under the control of a licensed operator.

The FCC goes on to say that the transmissions from Baxter’s station are tape recordings, which themselves wouldn't be illegal, but that in some cases it sounds to the FCC as if the recordings may have been questionably taken from an answering machine and off the telephone and broadcast without full compliance with the law. Enforcement authorities also wrote some of the transmissions are repetitive, apparently for weeks, of the same telephone calls.

Baxter has raised controversy for years with what he portrays as a daily bulletin service on 14.272, 3.972 and 3.890 MHz, prompting interference complaints from sideband and AM communities alike.

Baxter has patterned his program to the style of commercial talk radio, right down to having a toll free telephone number for listeners to call in and chat. The FCC wants Baxter to respond to its latest letter to decide what if anything to do next.

For the Amateur Radio Newsline, I'm Paul Courson, WA3VJB, near FCC headquarters in Washington.

--

This latest letter to Baxter came from Vincent F. Kajunski who is the FCC’s District Director in Boston Massachusetts. Kajunski also directed K1MAN to submit weekly reports detailing certain aspects of his stations on air operations. (FCC)

**

ENFORCEMENT: ALASKA BROADCASTER FACES FINES $137,000

A Christian broadcaster is facing up to $137,500 in fines for alleged wetlands damage on Alaska’s Kenai Peninsula. Fred Vobbe, W8HDU, of the National Radio Club’s D-X Audio Service has more:

--

The Anchorage Daily News reported on March 13th that Alexander Kozned of Ninilchik poured gravel and other fill into about three and a half acres of protected wetlands, as well as a stream and intertidal zone that drains into Cook Inlet.

The charges against Kozned come in a complaint filed this month by attorneys for the United States Environmental Protection Agency. The alleged violations are reported to have taken place during the summer of 2002 on Kozned's property a few miles north of Ninilchik. That’s a location where he reportedly wants to install a broadcast antenna array to broadcast religious programming to Russia and China.

An attorney for Kozned said the area affected is less than a tenth of an acre and that volunteers, not knowing about the wetlands, made an honest mistake.

He also claims that the EPA's reaction amounts to overkill.

But officials at the federal agency said Kozned knew of the wetlands and filled them without a permit, despite a 1998 warning. The E-P-A and the U.S. Army Corps of Engineers issued cease-and-desist orders at that time after discovering that Kozned used earth-moving and road building equipment on wetlands to build antenna pads. The E-P-A ordered Kozned to restore and revegetate the wetlands he harmed. Kozned complied and was not fined in that case.

For the Amateur Radio Newsline, I'm Fred Vobbe, W8HDU.

--

The charge marks his second run-in with federal environmental regulators. (Anchorage Daily News)

EMERGING TECHNOLOGY: A NEW KIND OF POP UP SPAM

As if junk e-mail and pop-up ads weren't annoying enough on their own, now there's pop-up junk e-mail. This, as the result of a developer of bulk-mail software has figuring out how to blast computers with pop-up spam over the Internet through a messaging function on many Windows operating systems. Amateur Radio Newslie's Bruce Tennant, K6PZW, is here with more on how it works:

--

The software is called DirectAdvertiser. The company that developed it is reportedly based in Romania. In recent weeks, Internet users have reported receiving pop-up messages such as one touting university degrees without classes or books.

DirectAdvertiser does not hack into computers. Rather, it uses a part of the Windows operating system called Messenger. It comes turned on by default with many Windows systems including 2000 and XP. Its meant for system administrators to broadcast service notices and should not to be confused with the various other instant messaging programs.

DirectAdvertiser was first reported by Wired.com, and appears to represent the latest attempt to bypass the increasingly sophisticated e-mail spam filters employed by leading Internet service providers and individual users. It also appears to circumvent federal and state laws designed to curb junk e-mail.

For the Amateur Radio Newsline, I'm Bruce Tennant, K6PZW, reporting

--

There is one major fault to DirectAdvertiser that makes it easy to beat. To receive the pop-ups Windows Messanger must be turned on. If you don't want to get them -- just turn Messanger off. (OnLine Technology)

**

HAM RADIO IN SPACE: AMSAT SPACE SYMPOSIUM SEEKS PAPERS

The 2003 AMSAT-NA Annual Symposium, scheduled for October 17 to the 19th in Toronto Canada has put out its first call for papers to be presented at the event. The subject matter should be of general interest to amateur radio operators involved in satellite communications.

Papers may be presented by the author during the Symposium or simply offered for inclusion in the Symposium Proceedings publication. A brief abstract of the proposed paper should be submitted as soon as possible. The final date for abstracts is June 15th with copy ready papers must be received no later than August 15th. Electronic submittal is preferred in Microsoft Word format.
E-mail electronic submittals to Wayne Chandler at ve3whc@amsat.org (AMSAT)

**

INTERNATIONAL - AFGHANISTAN: NEW KANDAHAR RADIO STATION TO BE LAUNCHED

On the international scene, the Boston-based N-G-O Afghans for Civil Society has announced that former BBC producer Akhtar Kohestani will serve as station manager for Afghan Independent Radio or A-I-R. This is a new station which is to be launched this spring.

A-I-R will be the first independent radio station to be based in the former Taliban stronghold of Kandahar in southern Afghanistan. Plans are under development for program sharing with the BBC, Radio Free Europe, Radio Liberty, the Voice of America and Radio Afghanistan. (Stewart McKenzie)

**

INTERNATIONAL - POLAND: NEW BANDS FOR SP HAMS

Also, SP5HS reports that Poland's new national frequency allocation table came into effect on February 27th and its pretty good news for that nations hams. The new rules allows S P amateurs to use the 136 kHz band, while the 50 MHz band is now allocated to amateurs in Poland on a secondary basis. 6 meters is still shared with government services. (GB2RS)

**

BEACONS: 2 METER K7XC/B ON THE AIR FROM NEVADA

A new 2 meter propagation beacon is on the air from the state of Nevada. Amateur Radio Newsline's Don Wilbanks, AD5DW, tells us who put it on and where to find it:

--

Tim Mareck, K7XC reports that the 2 Meter beacon operating under is call sign is now installed at it's new mountain top home here in grid square DM-09. Tim says that its on 144.288 MHz and operating from 4900 feet atop Lahotan Peak. This is above the Lahotan Reservoir near Silver Springs Nevada. Currently, the beacon consists of a 10 watt C-W transmitter into a single K-Q Loop at the 30' level on the tower. If you hear it, you can be pretty sure that 2 meters is open to Nevada from where ever you are.

Tike adds that the next project is a 6 meter beacon from the same site. It will use a Yaesu FT-620B running at 10 watts into a old style KB6KQ loop. This antenna will be placed 2' above the 2 meter loop on the same mast. Tim's target date to complete this phase of the project? He says hopefully sometime in June.

--

Again, the frequency of the K7XC beacon is 144.288 MHz. If you hear it you can send Q-S-N reports to Tim by e-mail at timm@cccomm.net (VHF Reflector)

**

DX

In D-X, six German operators will be active as A-35-X-M from Tonga to the 4th of April. They will concentrate on working Europe. More information is at www.df3cb.com/a35xm (OPDX)

And Tim Totten, N4GN, reports that all Oh-J-one thru Oh-J-8 QSL cards for W-R-T-C 2002 have been printed and ready for release. If you want to obtain your QSL cards directly, send an S-A-S-E before April 15th to Toni Linden, OH2JTE, Ohratie 16E218, 01370 Vantaa, Finland. Tim also says that plaque and T-shirt and Early Bird submission winners can be viewed at the following site. Its out there in cyberspace -- at www.n4gn.com/wrtc. (N4GN)

**

THAT FINAL ITEM: YHOTY 2003 NOMINATIONS SOUGHT

And finally this week, the nominating season for the 2003 Young Ham of the Year Award is now open. Our producer, Bill Pasternak, WA6ITF, is here with the details:

--

Each year, we at the Amateur Radio Newsline join forces with Vertex-Standard and C-Q Magazine to honor the accomplishments of a young radio amateur who has contributed in some special way to the hobby or to society through the hobby.

The rules are still the same. A nominee must be age 18 or younger, hold any class of Amateur Radio license issued by the FCC and live in the contiguous 48 states. And this year, thanks to Kevin Boudreaux, N5XMH, its easier than ever to file a nomination.

Kevin was the 1993 Young Ham of the Year award winner. He has now created a new on-line home for the award that has all the information, rules and downloadable forms needed to submit a nomination. And Kevin has taken it a step further. He has also created our first-ever fill in the blank on-line nomination form. Just provide the information on-line, click at the bottom of the page and your nomination is on its way to us.

After you finish filing your nomination, please click on some of the other pages and take a look around. You will find it in cyberspace at www.yhoty.org/2003.htm . There is also a link to it from our website at www.arnewsline.org . Printed forms are available for an SASE to the Young Ham of the Year Award, 28197 Robin Avenue, Santa Clarita California 91350.

--

Our thanks to Kevin Boudreaux, N5XMH, of Dynamic Marketing for taking the time to create this new website. He is one Young Ham of the Year who is still an important part of the award. (ARNewsline™)

**

NEWSCAST CLOSE

With thanks to Alan Labs, Amateur News Weekly, AMSAT, the ARRL, the CGC Communicator, CQ Magazine, the FCC, the Ohio Penn DX Bulletin, Radio Netherlands, Rain, the RSGB and Australia's Q-News, that's all from the Amateur Radio Newsline(tm). Hi all,

I've come across this relatively simple problem from my old notes
circa 1980:

In the circuit below, what is the lowest frequency at which 90% of the
signal voltage "Vin" will be developed across the three load resistors
20k, 40k, 40k?

```
                                    10uF
           10K
           ___                       ||
    Vin  -|___|-+---------------+---+||+---+---------+---------+
                   |            +    ||    +         +         +
                  .-.          .-.        .-.       .-.       .-.
                  | |          | |        | |       | |       | |
               30K| |          | |     20K| |    40K| |    40K| |
                  '-'          '-'        '-'       '-'       '-'
                   +            +          |         +         +
                   |            |          +         |         |
        -----------+------------|----------+---------+---------+
                                |
                               GND
```

In 1980, I made it 9.09Hz, but now I make it 16Hz. Which of me is right? And is it anything to do with the capacitor's value changing over the intervening 23 years? :-)

No, seriously, which answer, if either, is correct? This is pissing me off!

>                                GND
```

What's the value of the unlabeled resistor(?) above the GND?

FWIW, the 10k and the 30k make a voltage divider so that, with no load, the voltage that appears at their junction will only be 75% of Vin. Any load will make that percentage lower. You're not goint to get 95% of Vin on the right of the capacitor for any frequency or value of the unlabeled resistor.

>In 1980, I made it 9.09Hz, but now I make it 16Hz. Which of me is
>right? And is it anything to do with the capacitor's value changing

The answer is "impossible". Several reasons why:
(1) The voltage divider created by the 10K and 30K resistors limit the voltage to 75% of Vin, no matter what the frequency.
(2) The equivalent value of the load is 10K, and disregarding the capacitor, the 30K resistor and the unlabeled component, the voltage divider created by the 10K load and the 10K input resistor limits the maximum voltage at the load to 50% of Vin.
(3) Of course the above would be modified by the type and value of the unlabeled component just to the right of the 30K resistor.

I can't figure it out without knowing the value of the unlabeled
resistor, third from the left.

If your capacitor is electrolytic the value change over the years. Partly due to temperature stress and partly due to the current running in it/voltage applied to it.

It must be too early in the morning for me - you say 23 years - a joke or for real? A electrolytic capacitor won't be much worth after 23 years if it has been driven modestly.

Cheers

Klaus
